Caminada Headland

14 Miles of Beach Restoration to Protect Port Fourchon

Restoration of the headlands at the mouth of Bayou Lafourche is vital to the protection of Port Fourchon, Highway 1, Leeville, Golden Meadow and points north.

The Caminada Headland restoration's \$70 million first increment is using 3.3 million cubic yards of sand dredged from Ship Shoal 27 miles away in the Gulf of Mexico to greatly enhance nearly six miles of beach and 303 acres of beach and dune habitat, the first-ever use of the sand-rich source located in federal waters.

A second increment will begin later this year to extend the beach restoration another 7.5 miles, creating approximately 490 more acres of beach and dune habitat using more than five million cubic yards of Ship Shoal sand.

Increment One is using \$30 million in state surplus funds and \$40 million in Coastal Impact Assistance Program funds. An additional \$147.5 million has been obligated by the National Fish and Wildlife Foundation for the engineering and design and construction of the second increment.

Caminada Headland Beach and Dune Restoration Increment One in June 2013 (Top) and again in November 2013 (Bottom).

* **Tier 1:** Projects are a high priority and are either consistent with the 2012 Master Plan or CPRA has agreed to move the project forward.

Tier 2: While still a priority, these projects have likely experienced delays or are not as consistent as Tier 1 projects with the 2012 Master Plan.

Tier 3: While potentially beneficial, these projects are the least consistent with the 2012 Master Plan and have experienced significant delays or potentially insurmountable issues that will likely affect the project's ability to be constructed or meet its intended goals.

Project Types Included in Coastal Program:

Projects in Construction

1. **OPA Little Lake (BA-167):** The OPA Little Lake Project is a mitigation project through LOSCO. This project will be implemented with the Mississippi River Long Distance Sediment Project (BA-43).
2. **NRDA Lake Hermitage Marsh Creation INCR2 (BA-141):** The project will create 104 acres of marsh.
3. **Riverine Sand Mining/Scofield Island Restoration (BA-40):** The project transports sediments from the Mississippi River to Scofield Island to restore the island’s dune and marsh habitats.
4. **Lake Hermitage Marsh Creation (BA-42):** The project creates wetlands and reduces tidal exchange in marshes surrounding Lake Hermitage by using material dredged from the Mississippi River.
5. **Long Distance MS River Sediment Pipeline (BA-43 EB):** The goal of this project is to use material dredged from the Mississippi River and transported via a pipeline across the Barataria Basin to create marsh and/or a ridge.
6. **Caminada Headland Beach and Dune Restoration (BA-45):** The project will restore and protect beach and dune habitat across the Caminada Headland by the direct placement of sediment from offshore borrow areas.

7. **Bayou Dupont Marsh and Ridge Creation Project (BA-48):** This marsh and ridge creation project is intended to nourish approximately 118 acres of marsh and create 15 acres of maritime ridge by long distance pumping of Mississippi River sediment.
8. **West Bank and Vicinity (BA-66):** The project provides 100-year protection levels to the project area through levees constructed to 2011 protection levels and T-Walls and other structures to 2057 protection levels.
9. **New Orleans to Venice (BA-67):** The New Orleans to Venice project consists of working with 7 levee reaches, comprising 58 miles of major levee enhancement. The project repairs and re-builds the Empire Flood Gate and Empire Locks and provides repair and fronting protection for several pumping stations.
10. **Grand Liard Marsh and Ridge Restoration (BA-68):** This project will create approximately 328 acres of marsh, nourish approximately 140 acres of marsh, and build approximately 20,000 linear feet of ridge.
11. **Storm-Proofing of Interior Pumping Stations (BA-74):** Orleans and Jefferson Parishes will receive a variety of improvements to the parishes' interior pump stations under the Hurricane and Storm Damage Risk Reduction System (HSRRS).

Continued on Page 12

Continued from Page 11

- 12. Jean Lafitte Tidal Protection (BA-75-1):** This project will provide flood protection improvements by raising 15,840 linear feet of existing earthen levee. The project will also include approximately 7600 linear feet of concrete capped, steel sheet pile floodwall and flood gates.
- 13. Bayou Lafourche Fresh Water District - Walter S. Lemann Memorial Pump Station Renovations (BA-84):** This project will replace two of the existing pumps and motors at the Walter S. Lemann Pump Station and install an emergency generator to operate the pump station during power outages.
- 14. St. Charles West Bank Hurricane Protection Levee (BA-85):** This project is a system of levees, drainage structures, and pump stations being constructed to provide flood protection to the communities of St. Charles Parish on the West Bank of the Mississippi River.
- 15. South Lake Lery Shoreline and Marsh Restoration (BS-16):** This project involves dredging sediment to create 396 acres of marsh and to restore approximately 32,000 feet of the southern Lake Lery shoreline.
- 16. Cameron Parish Shoreline Restoration (CS-33):** This project re-establishes the dunes and beachhead for 8.7 miles, from the western Calcasieu River Jetty to the eastern-most breakwater at the Holly Beach-Constance Beach breakwater field.
- 17. Non-Rock Alternatives to Shoreline Protection Demo (LA-16):** Project goals are to demonstrate different alternatives to rock shoreline protection methods by testing several different products along highly erosive shorelines in areas that are not conducive to construction with rock.
- 18. Marsh Creation Near Freshwater Bayou (ME-25 SF):** This 2007 surplus project will construct approximately 96 acres of freshwater marsh near the intersection of Humble Canal and Freshwater Bayou.
- 19. LPV Task Force Guardian Mitigation – Bayou Sauvage (PO-145):** This project intends to mitigate approximately 147 acres due to emergency levee work that utilized 2 borrow pits of about 57 acres. It provides for the elimination of non-native trees and the replanting of up to 89,000 trees and shrubs of native species.
- 20. Previously Authorized Mitigation LPV – Manchac (PO-146):** The project provides for containment dikes with rock and fill areas with dredge material. This project is intended to create marsh and reduce erosion.
- 21. SELA – Overall (PO-57):** The project reduces damage due to rainfall flooding in Orleans and Jefferson Parishes by increasing pump station capacity and improving sub-surface drainage features.
- 22. Permanent Canal Closures and Pump Stations (PO-60):** In June 2006, Congress passed Public Law 109-234 giving the Corps authorization and appropriations of approximately \$800 million to design and construct a permanent protection system for the outfall canals. Specific aspects of the project include: modification of the 17th Street, Orleans Avenue, and London Avenue drainage canals and installation of pumps and closure structures at or near the lakefront.

23. **Lake Pontchartrain and Vicinity (PO-63):** The Lake Pontchartrain and Vicinity project refers to the hurricane protection program around Lake Pontchartrain. This program involves approximately 30 projects in east Jefferson and Saint Charles Parishes.
24. **Biloxi Marsh (PO-72):** This project provides shoreline protection for a portion of the southeastern shoreline in Lake Borgne along Biloxi Marsh in Saint Bernard Parish.
25. **Central Wetlands Demonstration (PO-73):** This water assimilation demonstration project will be completed in conjunction with the Sewerage and Water Board of New Orleans.
26. **Central Wetlands - Riverbend (PO-73-1):** This is a Wetland Assimilation Project located in St. Bernard Parish.
27. **Madisonville Bulkhead Project (PO-87):** This project will construct improvements to the existing bulkhead along the shore of Lake Pontchartrain and the Tchefuncte River at the Madisonville Marina.
28. **OPA Mosquito Bay (TE-109):** The proposed Mosquito Bay will create between 8 and 20 acres of additional salt marsh habitat in conjunction with the Grand Liard Marsh and Creation (BA-68) project. The marsh creation area will be formed by constructing earthen containment dikes around the boundary of the designated site. Sediment will be hydraulically dredged from an offshore borrow area and pumped via pipeline to create new marsh in the project area. After consolidation of the dredged sediments, vegetation will be planted within the project footprint.
29. **Valentine to Larose (TE-111):** To provide flood protection improvements to the current flood protection system along approximately 2,000 linear feet of levee along Bayou Lafourche, from the town of Valentine to the town of Larose.
30. **GIWW Bank Restoration of Critical Areas in Terrebonne (TE-43):** The project objective is to restore critical lengths of deteriorated channel banks and stabilize/armor selected critical lengths of deteriorated channel banks with hard shoreline stabilization material.
31. **Morganza to the Gulf (TE-64):** The project provides protection to Terrebonne and portions of Lafourche Parishes against storm events by developing levees, T-walls, navigation structures, water control structures, and floodgates.
32. **Larose to Golden Meadow - Flood Protection (TE-65):** Through this project, levee improvements and modifications are being completed in Lafourche Parish to inhibit flooding.
33. **Freshwater Bayou Bank Stabilization (TV-11B [EB]):** Located in Vermillion Parish, this project consists of approximately seven miles of rock revetment shoreline protection along four critical areas of the Freshwater Bayou navigation channel.
34. **Franklin Floodgate Sinkable Barge and Pump Station - Phase 2 (TV-52-2):** This project will construct a levee, floodwall, pump station, and sinkable barge structure on Franklin Canal to prevent storm surge from inundating the town of Franklin.

The Economic Case for Restoring Coastal Ecosystems
 As America's coastal cities expanded throughout the 19th century, the wetlands were often considered a nuisance that stood in the way of progress and development. Marshy areas seemed little more than endless founts of pesky insects or quagmires blocking access...
