Overview

In an effort to engage citizens and stakeholders across coastal Louisiana, open public meetings were held to provide overviews of the draft versions of both the 2017 Coastal Master Plan and the FY18 Annual Plan. During the hearings, CPRA solicited feedback and comments to be considered in the implementation of the final plans.

The following Public Hearing Transcripts include a full transcription of spoken word from the four public hearing meetings conducted by CPRA staff during the public comment period.

PROCEEDINGS:

MR. KLINE: So, we're going to go ahead and get things started here tonight. My name is Chip Kline. I serve as a deputy director for Coastal activities in the governor's office. I want to take this opportunity to welcome all of you here tonight. It's always good to be here in Southwest Louisiana, and particularly, here in Lake Charles.

So, tonight is the first of four public hearings that we'll be holding across coastal Louisiana, seeking your input on the FY-2018 Annual Plan and the updated 2017 Master Plan for a sustainable coast.

So, I would invite all of you tonight to take the opportunity to make a public comment. I would urge you to make public comments. Feel free to, if you feel the need, be critical in a productive and constructive manner. I would ask -- but this is our opportunity to hear from you, what you like about the plan, what you don't like about the plan, what you would like to see more of or to pose questions to us that you would like for our agency to respond to in the weeks and the

days ahead for this plan, the master plan, that's presented back to the CPRA board and also to the Louisiana legislature.

So, there will be four public hearings across the coast gathering input. The plan will then be presented back to the CPRA board in March or April. Then the plan is formally submitted to the Louisiana legislature where it goes through four legislative committees. It's quite an effort to get a plan of this nature through the legislature. I'm not aware of any other agency in the state that has to go through four legislative committees to get a plan approved, but it's a process that we welcome because of the back and forth and the give and take that we have throughout this process.

One of the things that I want to touch on before we get into the public comments and before I ask Mayor Roach to come up here, the master plan is not a new concept. This is not -- the 2007 to '17 draft master plan is not a document that we're starting from scratch over. This is a document that builds upon the first master plan which was developed

in 2007. It builds upon the initiatives and the programs and the projects that were called for in the 2012 master plan.

So, the 2017 plan builds upon all those plans, all of those concepts, all of those programs that were called for but one of the things that you will hear from Bren and his team tonight is how we have better science, how we have better models, how we have better innovative ways to predict the future of coastal Louisiana and to better plan for a sustainable coast.

So, one of the things that we've been hearing regularly is, you know, why is Governor Edwards, you know, scrapping all of the previous work that's been done across the coast and starting over? We're required by law to update our master plan every five years. So, this 2017 update is strictly an update to the current master plan that's guiding our efforts which, of course, is the 2012 master plan.

So, again, thank you all for coming.

Feel free to make public comments. We would encourage you. We would welcome your input.

21

22

23

24

25

We want to hear from you. I do want to take this opportunity to welcome a few public officials that are here tonight.

Of course, we have Mayor Randy Roach, the mayor of Lake Charles. Mayor, where are you? Oh, there he is, over there. We have Mayor Bertrand from Lake Arthur. Mayor Bertrand in here somewhere. I think he left. We have Nic Hunter with the Calcasieu Police Jury. Is Mr. Hunter here? In the back. We have Dennis Scott with the Calcasieu Parish Police Jury. He's right there. We have Mike Dever with the Chenier Plain Restoration & Protection Authority. Tina Horn, with the Chenier Plain Restoration & Protection Authority. Scooter Trosclair, and there's Scooter. We also have Ms. Lori Cormier. Ms. Lori Cormier of Calcasieu Parish was a member of the Coastal Protection & Restoration Authority, and Ms. Nedra Davis who is -- who else -- who did I miss?

MS. BARNETT: Kay Barnett.

MR. KLINE: Kay Barnett with the Chenier Plain Restoration.

Thank you, Kay, for being here.

Page | 8

But Lori Cormier and Nedra Davis both
serve on the CPRA board.

Then finally, I want to recognize an

Then finally, I want to recognize an individual who actually sponsored, was a lead legislative sponsor for the 2012, master plan. That's Senator Blade Morrish.

I don't know how many of you ever have the opportunity to ever come up to Baton Rouge or attend committee hearings in Baton Rouge or CPRA board meetings, but I wish that everyone from Lake Charles and from Cameron Parish and from Southwest Louisiana could see the way and the manner in which Senator Morrish represents this area. He does things the right way and he does them for the right reasons.

And, Senator, I just want to thank you for your efforts in the past, for your efforts moving forward.

So without further ado, I think I'm going to turn it over to Mayor Roach for some brief opening remarks.

MR. ROACH: Thank you, Chip. And if you had an agenda, you would see my name is not on it. I'm just here to welcome you, welcome you to the meeting and to thank you-all for coming

out and to be a part of this public hearing.

You know, over the years, we have had quite a discussion about Southwest Louisiana and the Chenier plain. It's been very heartwarming for me, and I say that in all sincerity, when I say "heartwarming," because it really is close to my heart.

18

19

20

21

22

23

24

25

Years ago in another life, I represented Cameron Parish as a state representative and I was somewhat involved in the coastal initiative. They got started back in 1988. To see how it has transformed from what it was then and what it is now and the attention that's being focused on Southwest Louisiana really is heartwarming. It is something that is somewhat overdue, but you can go into whys and wherefores and what have you, but the point is that we're here now and we are focusing on the Chenier plain and it is part of what we're doing here as a state and I think other people in other areas of the state know what the Chenier plain is about, and that's due in large part to your efforts and to the efforts of our legislative delegation and another organizations that have been very

involved in this process and some of the individuals that are here tonight.

So, one of the persons I do want to recognize, and I don't think it's anybody that is probably not a stranger to many of you, a young lady who has been very involved in coastal issues for a very long time. She's no longer serving as a parish president. She was the parish president from the first parish. I got to know her when she was battling out many things, you know, for the state and for her region, Charlotte Randolph for the state.

Charlotte, thank you for coming over tonight. I appreciate you being here.

I knew Charlotte as just an example of many of you, and I can go and call you by name, those of you who have been involved over the years. I know sometimes it's hard to recognize that progress is being made, but I can tell you just by -- I come in out of the issue because I'm not directly involved in it now as mayor but I do come in out of the issue and it's been very -- I've been very encouraged by what I see in terms of the

progress that's being made, in terms of organization, involvement. Again, the public input and focus has been placed here on development in Southwest Louisiana.

As I was sitting over here and talking a little bit about what goes on in the marsh, and I was -- I saw a video over here. It keeps rotating. One of the slides as it rotated through was Barrier Island. It says the Barrier Islands are a first offense. It just dawned on me as I was watching that slide, see how my mind works, how that slide projection, you know, worked and it kind of triggered something, said we missed it.

We were talking about the Chenier plain back in 1988, early 1990s what we should have done instead, we're talking about the Barrier Islands. Because essentially, what the Chenier plain is is what the Barrier Islands used to be, but now because we live on this side of the Mississippi, all the islands have been filled in by the muddy Mississippi, the sediment that has been deposited in this area but the ridges that we talk about in Cameron Parish, Hackberry Ridge, Little Chenier, Grand

Chenier all the different ridges that we have in Cameron Parish were formerly Barrier Islands.

14

15

16

17

18

19

20

21

22

23

24

25

So, when we talk about protecting the Chenier plain, we're talking about Barrier Islands. Again, I'm not on your agenda. You don't need to hear any more from me other than to say thank you for coming out tonight, thank you for doing what you're doing, thank you for helping to keep the issue very much alive for the folks here in Southwest Louisiana and all across the state, because it's not really just an us-type thing. It's a statewide thing. The coastal plan is important for everybody in Louisiana, even those who live up around the Shreveport area and on the I-10 -- I mean, the I-20 corridor. Those folks have as much invested in that as well, and I will tell you I'll tell you why I say that.

I say that because I do truly feel, truly believe that the coast of Louisiana, coast of Louisiana, the cultural part of Louisiana that is supported by that coast, that way of life, that unique way of life is very much a part of the soul of Louisiana that sets us apart from

other states in this country. So, that's another reason why it is worth our energy, our effort, and our money to make sure to preserve this. So, thank you for coming out tonight, doing your part, and I know that Chip and the other guys are looking forward to your comments. They're important and they do make a difference. So, thank you all for being here tonight and I apologize for having to step out. If you can hear a little activity in the next room over here, I was supposed to go give them a welcome. I am on their agenda. So, I'm running behind. Thank you so much.

MR. KLINE: Thank you, Mayor. I did fail to mention earlier on, I think, the Chenier Restoration Protection Authority and Providence were providing the cookies, coffee and refreshments over there. That was unexpected but very much welcomed and the last thing as I mentioned, I talked about the approval process for this plant. I want everybody in this room to recognize that this is a draft plant. This is not the final plan. So, the process is, is to take public comment, to incorporate that into the document, and

then that final plan will then be submitted to the legislature.

So, I don't want anyone in here to think that your comments are going to fall on deaf ears, because in 2012, I think we made somewhere in the neighborhood around of 20-plus, 22 changes to the master plan between the draft plan that was released and the final plan that was released to the legislature.

So, your comments are important and they will be incorporated or we will take a hard look, I guess I should say, at the comments that you made and to determine whether or not those will be incorporated into the final plan.

So, I'm turning over to Mr. Nick Speryer, who will be our facilitator, our MC, I guess you could say, for tonight to take you through the running ship.

MR. SPERYER: Thanks, Chip. I'll be brief. Agenda for this afternoon will be master plan presentation by Bren Haas, director of planning for the CPRA followed by public comments on the 2017 draft coastal master plan followed by a quick presentation

from Michael Ellis, director of CPRA and then public comments on fiscal year 2018 annual plan. So, as Chip and Mayor Roach welcome to all of you here, I'd also like to welcome our Facebook audience. You know, five years ago, I'm not sure how much Facebook really existed, but we are live on Facebook here tonight, and we'll do that across the coast, again, just trying to be more accessible in terms of the information that we're presenting and providing to the public so they can also participate even if they're unable to be here tonight.

If you haven't already done so, please complete a speaker form if you plan on speaking tonight. Raise your hand and we'll walk around. Yellow sheets are for the annual plan. White sheets are for the master plan.

So, with that, I'll turn it over to Bren Haas to give you a presentation on the 2017 draft coastal master plan.

MR. HAAS: All right. Thanks, Nick.

Thank you, Chip. I appreciate that. Thank
you-all for being here. I certainly
appreciate you taking the time out and coming

to hear what we have to say today. I'll be reiterating a number of points I think that Chip mentioned earlier, but I want to right off the bat reiterate the fact that this is a draft plan, and the reason we're here is to hear your comments on that plan and, again, just take those into consideration and ultimately develop a final plan that is hopefully as responsive as we can be for the needs of our community.

I'll let you know, even though this is our first sort of official opportunity for a public comment for a public hearing. We've been doing a lot of work with many of your representatives to get to the point we are, to get to the point where we've, you know, put the draft plan together and had that release.

So, just looking around the room, Ralph,
Ryan, Scooter, Senator Morrish, Nedra, Lori,
and others, they've all, you know, been
involved in this in some way, shape, or form,
and I want you to know that they represented
you, I think, well. We've heard some of their
concerns and I think we're going to hear some
of those concerns with you-all here tonight,

you know.

The second point, I guess, I would make before I jump into things is that there's a lot of good stuff at this plant and I believe that. I just -- those aren't hollow words. There's an awful lot of good stuff that's not in this plan right now and the reality is that we can't do everything that we want to do for all of our citizens and so, our goal is to try to do the best we can with our limited resources for the most people. So, hopefully that will come out as part of this presentation and I certainly look forward to hearing your comments as we move into things.

So, who are we? We're the Coastal

Protection & Restoration Authority. We're a

relatively new state entity formed following

the devastating hurricane season in 2005. Of

course, "Rita" and "Katrina" hit that year and

it was really the time when the State said,

you know, we're not going about our business

in a proper manner. We've got people doing

hurricane protection work. We've got people

doing restoration work, and the two folks, two

entities really weren't talking to each other.

It was realized that we need to integrate those things, because as Mayor Roach said, this part of the country, certainly the Chenier plain is part of that first line of defense and needs to work hand in hand with our system.

1

2

3

4

5

6

7

8

9

13

14

15

16

17

18

19

20

21

22

23

24

25

So, we were mandated to do that, to integrate those two things and to develop and implement and enforce a master plan, again, for doing those things for our coast. So, nobody is as familiar with this as you-all are, but certainly, I don't think we can have this conversation unless we talk about the tragedy, the crisis that's facing coastal Louisiana. This is a historic look at things. Since 1932, we've also lost, you know, almost 1900 square miles of our coastal wetlands. Unfortunately, as we look forward and predict what might happen in the future, this is a 50-year outlook here. You can see that we anticipate if we don't do anything about it, we'll continue to have this problem, continue to lose land as we move forward. The question is what do we do about it?

Of course, that's what we're here to talk

about. Why is it important? Again, you-al are know these facts and figures probably better than I. I'll not read them off, but, first of all, too many people live here in coastal Louisiana which we provide a tremendous benefit, but really a treasure to the nation, really internationally if you take into consideration all of these things that you see listed here.

In terms of investing in our economy, certainly no place in the State of Louisiana has probably experienced the growth and the amount of investment that you see here, roughly \$100 million in recent times, and I think that number has gone up as we speak. You can see the impact in terms of jobs related to that investment. Of course, if you're looking for Fourchon, you're looking at jobs created there, services provide the rest of the country over 90 percent of the Gulf of Mexico offshore, oil and gas platform potentially economic impact of the deepening in the Mississippi River and its existing economic impact is a tremendous economic asset, not just to South Louisiana or

1

13

14

15

16

17

18

19

20

21

22

23

24

Louisiana, but certainly the nation.

And again, you know, we know what we're fighting for. We know that we can't give these things up. These are too important not just to us but, again, to the nation. Again, I won't read through these, but you can see some of the benefits and impacts that would be associated with losing this precious place. There's our coast. It's a place where we live and play.

So, a tremendous amount of work has been done since that 2007 or so time frame. You know, the last ten years, roughly \$20 billion. That's \$20 billion has been secured and used to implement projects, projects that are on ground today. We have moved over 120 million cubic yards of dredge material to build marshes, ridges, beaches, our very shorelines and so forth across the state in that time period benefiting, you know, 36,000 acres of wetlands, constructed and improved about 282 miles of levees across the coast and about 60 miles or so of Barrier Island work has occurred in that time period.

So, there's been a tremendous amount of

activity going on. What we're talking about today is looking perspectively. These are things that occurred in the past.

So, this is just a schematic of where some of that stuff has occurred and some of the highlights of things that have occurred here out west certainly are things like the southwest coastal feasibility study we completed in cooperation with the Corps of Engineers, the Cameron shoreline project, breakwaters of Holly Beach. The use of dredge material from Calcasieu Ship Channel. We're beginning work on other projects like Oyster Bayou. T-bow points is another example of a project that's occurring here, and then the Calcasieu Salinity Control Measures project is underway as we speak.

So, you know, again, we're sort of looking retrospectively, because there's a lot going on both here today and in the future.

We'll get into that as we talk about the annual plan once this presentation is finished.

So what is the master plan? What is it at its most basic? It's really a method for

us to be able to make hard decisions. So, I mentioned earlier that we recognize -- I think everybody in the audience would recognize that there's no way for us to do everything for everyone. We don't think we can provide all the projects, all the benefits that we think our citizens deserve. And so, we have to figure out a way to make tough decisions about what those things are that we can do, what projects can we build and where is best to place those projects. Then it's at its most basic level a list of projects, a list of those things that we made those tough decisions about.

And so, the normal ways I think about this is sort of my personal life, and hopefully you-all can relate to this, but in our household economy, most of us don't make enough money to not -- you know, to become a factor in the decisions that we make. We all want to have a nice car. We all want to have a nice house. We all want to spend money on some of those things that provide benefits to us today. We also know that we've got to save some of that money for retirement, right? We

need to have some benefits down the line.

And so, the framework that's set up on the master plan is essentially doing just that. How do we do the most good that we can both in the near-term and the long-term with those limited resources or that limited checkbook, if you will, that we know we're going to experience?

And so, again, hopefully that helps us explain what the master plan is at its core. So, why are we doing all the plans? Chip certainly touched on this. The legislature were mandated to do that, and I think for good reason because you-all know our coast is changing hourly, daily, certainly every year. So, to think the plan that we developed back in 2012 as perhaps the appropriate plan for today, I think, would be naïve. Technology improves. As we build projects, we learn from those projects. We want to make sure that we're incorporating that knowledge and that increased knowledge based into the projects and that we propose and updated plans, and again, our predictions for the future changed. Our coast has changed and the predictions for

1

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

what might happen in the that distant futures changes.

So, this allows us to react to that and integrate the restoration of hurricane protection projects in one place.

So, some of the key differences between 2012 and 2017 include science and engineering. Really, the ink wasn't dry on 2012 before we took a step back and said, "Okay. What would we have done differently? What are some of the things that we would have liked to have done perhaps for 2012 that we weren't able to do and the things we ought to do for 2017? What are some of those lessons learned that I've just referred to that we can incorporate into 2017?"

And those things were done. In terms of our analytical tools and how we evaluate projects and select projects listed are approved over what we did in 2012.

We've incorporated new ideas and information into this plan. So, we made two public calls back in the 2014 time frame for new projects. We certainly don't think we have all the answers. We wanted to hear from

you-all about new projects being incorporated as part of this plan and we've got a tremendous response from that. Many of those projects were evaluated as part of the 2017 updated process.

There's increase focus on flood risk reduction and resilience. So, you'll see that reflected in some of the projects that are selected here. We've got a nonstructural program as part of this plan and was mentioned in 2012, but wasn't developed perhaps as robustly as it is here, an increased emphasis on our communities and how these plans and our potential futures might affect or communities in terms of real things. Hopefully, you had a chance to look at Appendix B back there. It's a nice companion document, I think, to our master plan that talks about things like how our census we face, you know, future executions.

And so, that's a nice addition, I think, this go-around for the updated plan. We've expanded our engagement. We've been able to move our funding situation up a little more because we've got some clarity in terms of the

dollars coming into the state related to the oil spill settlement that we didn't have back in 2012 and also, obviously, we've got certainly an increase sense of urgency in terms of needing the projects on the ground now. The way I always put it is, money now is better than money later and projects now are always better than money later.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

The objectives of the plain are the same as they were for 2012. So, hopefully, you're familiar with these. Again, we want to protect our citizens from flooding. We want to harness those natural processes that help build coastal Louisiana in the first place. We want to provide coastal habitats that are important to our commercial and recreational activities. We want to preserve our cultural heritage. It's something that we certainly hold near and dear. And so, one of the reasons that we all live here, I think, is something that's very important to us. want to provide for that working coast. talked about some of the investment and economic value that the coast provides.

Certainly, I think, Louisiana, like no

other place in the world, is a place where we live, work, and play in our coast. It's not a place that we simply visit on weekends for fun, although we do those kind of things and those are certainly encouraged. It's a place that provides a living for us. We want to make sure that we're perpetuating that as we move out in the future and planning for that, as well.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So, this is just a schematic, really, of kind of how the process works. This is a pretty simple diagram of it but essentially, we start with a group of projects. I mentioned making a call for public projects. We also evaluated all the projects for 2012 and a few others, as well. Those projects are evaluated and predictive models. So, they're evaluated with some tools that we've developed to help us evaluate the effectiveness of those projects. The planning tool that you see listed on the left there is really a means for us to organize and understand output from those predictive models and then see which projects we think might work well together, which projects might not work well together,

put those projects that do work well together into group of projects called alternatives to be reevaluated ultimately to get the support of a draft plan.

So, I'll talk first about the projects. These are those that we've evaluated as part of the 2017 draft plan development process. So, there were 135 restoration projects all together that were evaluated. 54 nonstructural projects were evaluated all together and 20 structural protection projects were evaluated all together. So, you get, you know, a total of about 209 projects that were evaluated. Just to give you an idea and this touches back on our resource, the nature of this plan, if you added up a total value of these 209 projects, you're looking at about \$150 billion worth of projects.

So, clearly the demand for this kind of work way outstrips our ability to supply those kind of projects. Again, it gets back to our need to make those hard decisions about what do we think we can realistically do, what is in the plan and some of those things that are not in the plan. So, moving on to the

predictive models, this is -- you know, again, we're getting into how we evaluate the projects and it's really two main pieces here. It's sort of the upper piece that really just is a way for us to predict how a project or how our future might look in terms of how does the water move, what's the salinity of that water, how does sediment do, where does it go? Is it eroded or is it deposited to help build wetlands? What happens to our vegetation? Does it stay the same? Does it change if we have a project? Then what happens to our fish and wildlife? What happens to those things? Certainly, those are extremely important to the coast.

This is the place and the planning process where those evaluations occur. Then we also talk about, you know, risks and protecting our citizens from storm surges and so forth. This is where that occurs, and this module appears. So, storm surges and waves and then that's translated to risk which is really that economic impact on us and our communities. That's so important, as well.

Then all of that occurs over a series of

potential environmental scenarios as we move in the future. So, the things that you see listed here are things that affect what our future might look like, sea level rise, storm frequency and intensity and so forth.

Then, you know, people wonder, well, why are you planning for this sort of range of future? A the reason is, is we pick up one potential future and plan against it. We know the likelihood of that actually being correct is not high.

And so, our goal is to pick what we think is a plausible range, and that range relates to potential land loss into the future. So, we're looking at high rate of land loss, immediate rate of land loss, and low rate of land loss in the future and select projects that are robust across that range. It's very much like trying to predict the weather. You look, you know, at the seven-day forecast. We see there's a 50-percent chance of rain. It might rain. It might not rain, but you know what, I'm going to pack a raincoat and try to plan for that eventually. I will be prepared for that.

So, the planning against these potential future scenarios that allows us to prepare for the worst, but certainly be in good shape, you know, if we don't need that raincoat.

So, there are two really primary factors that we look at in terms of how a project is selected or how much risk can be reduced in terms of flooding and how much do we build or maintain land. So, it's really as simple as that. There's two major decision drivers that we're using. Again, you see those listed up here in the top left corner.

I'm talking about constraints a little bit a couple of times, and there are two main constraints that we have to take into consideration. One, obviously, is money.

Again, we all live -- most of us anyway live within that constraint every day, how much money do we have to try to accomplish what we want to accomplish. We also have some real constraints related to natural resources like sediment, freshwater, and so forth.

So, we don't necessarily have all the sediment that we need or want to do, you know, everything that we need or want.

Then we have these metrics over here on the right and these are things that are important to us. It's not just as simple as land and risk production. Obviously, there are a lot of other things that are really, really important to us and those are captured in these metrics, which are ways for us to evaluate how individual projects or groups of projects of alternatives affect things that are important to us like traditional fishing communities or navigation or waterfowl or blue crabs and alligators and so forth.

And so, that's the sort of technical piece of this. That's sort of some of the science stuff and some of the science that goes into building, I think, what we think is a strong plan. We also, obviously, need to be responsive to the needs of our communities.

So, I mentioned a lot of work has occurred today. This is not work total that will occur from now. We'll really ramping this up, I think, taking it to another level, to be honest with you but this represents over 150 opportunities for folks to hear from us and for us to hear from folks about the work

that we're doing. This dates back, you know, three years now in terms of things as basic as, you know, some of the basic model information, what do people think about that, or methodology for evaluating projects, then, of course, more recently as we've had an idea of what a draft plan might look like, talking about that with folks.

25

One of the things that I point out here, it would be conversations. We had one of those right here in this room, in fact. It was much different than this. I think it was a very effective way, I think, of getting some good feedback from community members. an opportunity for us to be able have dinner with folks, sit one-on-one around a dinner table and talk about specific issues, specifics things that were needed to be available to talk with our stakeholders and for stakeholders to be able to talk with each other for that matter, and I think it's a good model for us to use and certainly, I think we'll be doing much more of that as we move in the future.

So, I want to touch on just a few key

points before we get to some of the outcomes of the plan. You'll see here that our overall funding amount again, that 50-billion-dollar amount and that's just a plausible amount that we think might be available to us in the future to implement these projects.

I mentioned that we were able to move some of that funding up to earlier time frames, and to -- in recognition of that, that urgency of needing to get projects on the ground now.

The split between wet restoration and protection projects is a 50/50 split. So, there's \$25 million in this plan worth of restoration, \$25 million in this plan worth of risk reduction.

I mentioned a scenario plan a little bit earlier, the notion of planning for the worst, and certainly hoping for the best. You know, this is where we are. We do think this is a conservative plan. Again, we planned for some pretty high rates of land loss into the future and this gives us the opportunity to monitor that, evaluate that and if we don't see that come into fruition, then the good news is

we're ahead of the game and adjust to that and we're in pretty good shape.

And then in terms of near-term and long-term results, I mentioned that a little bit earlier in terms of our sort of home finances. Certainly, that's key here. We know we need good stuff happening on our coast today. We also know that we need to be providing the coast, hopefully, that's viable for our children and grandchildren in the future, et cetera. Those near-term and long-term benefits were evaluated essentially.

So, let's get into the draft plan and what this looks like. This is it. Hopefully, you had a chance to look around the room today and see this and pick up a plan and are looking at it. You can see the projects listed here. I'm not going through each project type again. Hopefully, you've picked up a plan and can see that but I will point out that there are roughly 120 projects identified as part of this plan. It represents about 802 square miles of land that we wouldn't have otherwise with the plan. In terms of expected reduction and expected

annual damages, you're looking at roughly \$150 billion over the 50-year life plan.

1

18

19

20

21

22

23

24

25

So, just a closer look out west, you'll see, again, there's a model marsh creation proposed out in this area. There's some ridge restoration projects. You'll see some nonstructural restoration projects and you'll see hydrologic restoration project, one in particular highlighted here. I'll say that those projects are something that are -- if you look at the text or part of the plan, it sort of has a programmatic level, although we don't have icons on the map identifying them all over the southwest part, because we understand that that's an important tool around this -- you know, this area and that's something that certainly we'll consider and that is indeed part of the plan.

As you move out west, you start to get into some of those Barrier Island projects in the -- of course, getting into where the Atchafalaya and Mississippi rivers are. So, we're talking about some diversion projects, sediment diversion projects and then looking further to the east, you see more of the same.

These are the nonstructural projects.

So, these were, perhaps a better term, project areas but each of those polygons that you see there is what we identify as a nonstructural project. I haven't got into it yet. I'll let you know that what we're talking about here, many of you may be familiar with this through your experience from Southwest Coastal Study. We're talking about voluntary elevations of homes, voluntary flood-proofing of business, and then voluntary acquisitions of those may be deemed necessary and warranted.

So, you can see, in terms of the total number of structures that are listed here, we've got about 26,000. You can see the dollar figure listed here for that piece of the plan, as well. I will stress to everyone here that there is not a master list with addresses on it that says, "These are the projects that need to be elevated or acquired or flood-proofed."

Again, all on a voluntary basis. This is a very, very high level estimate of what might occur and what might be present in these project areas and should funding become

available to implement any of these, obviously, our first calls are going to be to the Cormier and Ryan Bourriaque and those folks who have been dealing with these issues much, much longer than we have, are much, much more familiar with what some of the local issues associated with these kind of projects are to make sure that we're implementing these things in the right way, the way that's acceptable to folks in these areas.

So, in terms of the breakdown on project type, you see that here. Again, we got a 50/50 split, 25 million, 25 million. See the types of projects that we have listed on restoration and, of course, the structural and nonstructural under types of projects under risk production. I pointed out here that we hear a lot that we need a dredge, we need a that for the breakdown in terms of dollars in this plan, the single largest expenditure that we had the ridge restorations and marsh restorations, barrier restorations, of course, that are all associated with dredging, is the single largest expenditure

proposed in the plan.

So, we're going to look at some outcome maps. This is something that's new this go-around. We weren't able to do this previously, but we're going to look at this is a future without action and then we'll look at future with action and a couple of time periods that you can see what impact the plan has in terms of actual land on the ground.

So, an icon helps me sort of keep up with where we are. So, if see the red X, that means this is a future without action or a future without the plan. There'll be some others that you'll see that has a green check there and that means, of course, we're looking at a map that reflects what the plan delivers or what the landscape might look like with the plan. Again, the red is land loss and green is land gain sustained or land that we wouldn't otherwise have but for the plan.

So, look at Year 30. This is with the plan, and you start to see some of those projects coming in, coming into play on the ground. Much more green, obviously, here than we would have had otherwise and then if you

look at Year 50 without the action, without the plan, you know, things are looking not so great. Then we look at Year 50 with the plan, we see that we're able to preserve or maintain and build a significant amount of land there.

So, how much land? I mentioned already, but about 802 acres -- not acres. I always say acres, but 802 square miles of land that, again, we wouldn't otherwise have but for the implementation of the plan at Year 50, at that 50-year time period.

And so, all this translates into potential flood depths and this is something, obviously, that's immensely important in our communities, to the people that live along the coast as what flood depths look like and changing landscapes certainly affects these floods depths. So, what you see here is a range of potential flood depths ranging from this blue color which is about one to three feet on up to over 15 feet which is sort of purplish color.

Again, we're going to look at some future-without-action scenarios and we're going to look at some future-with-action

20

21

22

23

24

25

scenarios, and you can see what the differences are there. We've got -- you know, a number of people have talked about what's a 100-year event? What does 100-year event mean? It's very risky and really dangerous, frankly, to compare one storm to another but just by way of reference, you know, I point out that Hurricane Rita, essentially, for St. Mary, Terrebonne, Vermilion, and Cameron Parish was classified as a 100-year event. Again, that doesn't mean that if somebody says "100-year event," that you can expect the same impacts. Every storm is different. landscape changes. So, that's a probably dangerous thing to do. Just to give you an idea of what a 100-year event might look like, that's the kind of storm that we're talking about.

And so, we'll look at what happens with flood depth with the plan. This is at Year 25. Then these are the differences. So, this is a difference between the first two maps that I've shown you. The greens -- essentially, the blues and greens are good numbers. These are reduced potential flood

depths that you see, the blues and greens, again, in these areas as a result of plans. Those are reduced flood depths for the future. So, look at Year 50, this is without the plan. Then look at Year 50 with the plan and then again we'll look at the difference. Again, you can see some of those differences between the living without the plan.

So, what does that mean in terms of raw numbers? Again, we talked about 802 square miles. In terms of expected annual damages which is a way we measure the economic impact to those flood depths, look at, you know, Year 25, a reduction of about \$3 million and once you get out into Year 50, you're looking at a reduction of about \$8.3 billion. It's really important to note that this is an annual number. So, that's \$8.3 billion at Year 50. If you sort of do a rough cumulative impact of these, you're looking at \$150 billion reduced used over the 50-year period. So, you're looking at, you know, 3 to 1 investment as we talked about potential storm damages.

So, what does all this mean? What does the plan deliver? Well, I think -- I'm going

to start over here. So, I'm not going in order, top right-hand corner. The plan is assigned to do a lot of good. I know that the red maps are pretty stark, pretty alarming to all of us in terms of what the future land loss might be but keep in mind, those are predictions. In terms of that land loss, it gets, you know, pretty bad. It really gets bad as we get into those out years.

So, what we have is time to adapt, time to implement projects, to help adjust that curve, adjust that land loss in the future. We also have time to measure our effectiveness and measure how we think, what we think is really happening on the ground. The sea level rises as much as we really thought it would back in 2017 and we can adjust our plan as we move forward because we're required to update this plan every five years to adjust those conditions.

We provide a diversity of projects.

Again, I mentioned the 120 projects,

76 restoration projects in the final plan,

12 structural protection, 32 nonstructural

protection projects. We know we can reduce

risks. I mentioned the \$8.3 billion the Year 50 or up to about \$150 billion over the life plan. We know we can build or sustain land, you know, to the tune of, again, roughly 800 acres all the way up to about 1200 acres depending on that future scenario that -- square miles. I did it again. 800 square miles to 1200 square miles depending on the further scenario that we're looking at.

23

24

25

For the ecosystem, generally speaking, we've been able to essentially ameliorate any potential major negative impacts and this is what I'm talking about, fish, shellfish, crabs, oysters and stuff like that. In many cases, we actually benefit some of those things and we know we provide economic development opportunities. So, clearly, we discuss the economic investment that's occurred just in this region of the state in recent times. A healthy sustainable coastal system certainly encourages, I think, economic growth and the things that we're doing to deal with the issues that we're all grappling with, land loss, potential sea level rise, restoration and protection and so forth, are

things that Louisiana was dealing with before really anybody else in the country are dealing with.

So, we're really at the tip of the spear in terms of dealing with these issues. We are learning a lot as we do this. They're looking at us for answers on how we might do this in place of like New York or California or Florida. So, this really is we think an export commodity and something that we're leading the way in to help in other parts of the country.

So, in terms of getting additional information, hopefully, you've got your fill of information, and I certainly encourage you to go to our website and have a look at all the appendices and technical documents and flyers and so forth such as the master plan. There's a wealth of information, much of which has been available for well over a year but some of which has only become more available more recently but we encourage you to go coastal.la.gov to look at those things.

Something hopefully that you've had the chance to pick up and something that's new for 2017

are these parish fact sheets. This is kind of a handy quick reference when you go to your parish, look at the -- some sort of vital stats on what the future might hold for your parish and on the flip side, look at what the master plan may or may not hold for your parish, as well.

We have the same or similar fact sheets for each project. So, if you're interested in a particular project, you can look that fact sheet up and get some basic information related to those projects, as well. We have a master plan data viewer that's available and hopefully some of you took advantage of -- take a look at that at the back of the room.

This is an interface where you can go and look at how projects in the plan impacts things like land loss in a particular area or flood depths in an area. You can type your address in, for example, and you see what your flood risk is today and what it might be in the future with or without the planning board. So, it's a pretty handy tool, pretty informative thing. I hope you can take advantage of.

In terms of the process, getting from the draft plan, the final plan, again, the draft plan was released on January 3rd. We're here on the 17th in our first public, you know, hearing. We have three more of those and I'll get into that just a second. Public comment period or official public comment period ends end of March, March 26th. We have to -- we'll be presenting the final plan to our board, our CPRA board on April 19th. Then ultimately submitting the plan to the legislature for approval or disapproval as of order on April 25th.

In terms of where the other public hearing's are going to be, we're in New Orleans tomorrow night. We'll be at Houma on the 24th and then Mandeville on the 25th. It will be the same format, same stations and so forth, much of the same information, but just because we're here in Lake Charles, doesn't mean any or all of you couldn't show up, certainly, New Orleans, or Houma, or Mandeville and provide us a comment if you'd like or you have folks somewhere able to

attend here and you think might be interested

in attending on of these other meetings, we'd certainly appreciate it if you let folks know.

So, that's the end of my part of the show. I hope you learned a few things and we're going to hear from Nick here in just a second. I guess, you know, I would like to reiterate again kind of before we move into the formal public comment period, you know, it's important for us to, first of all, recognize that we know, again, there's a lot of good stuff in the plan, there's a lot of good stuff that's not in the plan and it's really important for us to hear your concerns, what you think you don't like about the plan, but it's also very important for us to hear those things that you might like about the plan.

As we're moving from a draft to a final, you know, we're in a resource-constrained environment which generally means if we make changes, that affects everything else that's going on. So, to hear about the things again that you do like about the plan, again, is just as valuable to us as hearing about those things that perhaps you might not like. So,

just keep that in mind, please, if you're making a comment and we're looking forward to hearing from you. Thank you.

MR. SPERYER: Before we get into the official public comment, just so all of you know, there's multiple ways to do that and We certainly appreciate and want to hear from all of you who want to step up to the microphone tonight and go on official public record regarding your comments on the 2017 Draft Coastal Master Plan. For whatever reason, if you don't want to do that tonight, there's other options for you to be able to provide your comments, and they're just as meaningful and impactful and, you know, first thing, you should go to our website. You're able to access, submit comments online through a form. You can send us an e-mail at masterplan@la.gov and we'll receive it just the same as we will tonight. You can even do it the old-fashioned way as well, if you prefer. You can actually mail us written public comments.

So, again, all of these options are available regardless of whether you stand up and speak tonight, you're able to do these

1

19

20

21

22

23

things through March the 26th, all of these comments are being compiled and are part of an appendix that will live with the record forever in terms of what the final master plan is and what changes were made based upon the comment period that we have between now and March 26.

As was referenced by Chip earlier and Bren, again, significant changes were made in 2012 and if you haven't looked at a 2012 master plan, the document, I'd encourage you to do so. This process certainly does matter.

The way this is going to work this afternoon is I've got a stack of cards that have already been turned in. If you did not turn in one already, I would ask that you just raise your hand. We'll walk around. We'll pass out. We're going to be dealing with the white forms at this point in time. The white forms are for the master plan. We're going to ask you to hold it for three minutes. We certainly don't want to stick around all night but what we are committed to doing is -- following this meeting, is certainly we're willing to stick around and have any

1 interactions or chat and try our best to 2 answer any questions or address any concerns 3 that you might have. 4 5 6 7 8 she will be officially documenting all the 9 10 11

In the process, I'd like to introduce you to Ms. Belynda -- where I'm from in St. Landry Parish, we say Champagne, but I think Champagne is the sound Belynda goes by.

comments that you provide here this evening.

So, the way this will work, we're going to start with Mr. Scooter Trosclair. Scooter will come up, three minutes. Keep an eye on Zack. He'll sort of let you know when you get down to two minutes and one minute.

Ryan Bourriaque, you'll be next. ask you, when you step up to the microphone, please state your name, and if you're representing an organization or an entity, I would ask you to please do so.

Okay. Go ahead.

MR. TROSCLAIR: Scooter Trosclair with the Department of Wildlife and Fisheries, Wildlife Refuge and program manager, Gravity Drainage District No. 5 in Cameron Parish and also with the Chenier Plain Authority as well

12

13

14

15

16

17

19

20

21

22

23

25

as a concerned resident of Cameron Parish. First of all, I have to truly thank CPRA for supporting one of the most important projects we've seen in our area is the shoreline protection. It is very disappointing to see the new plan, no shoreline protection and some of the feedback we've gotten is, you know, shoreline protection is so expensive to harbor the whole coast. We've asked to maybe prioritize some of our coast with the highest rated areas or eroding areas and to give you an example, we've done recent surveys where we've found places that's succeeding 233 feet in nine months recent. So, this is not a hurricane event. This is an annual process. We look into the master plan, 800 square miles, 512,000 acres, 140 billion, 50-billion-dollar plan over 50 years. 273,000-plus dollars per acre of benefits and cost or cost for benefits. We look at shoreline protection for the highest eroded area of nine miles that we know in 50 years will erode well over 50 feet per year. That's 2,727 acres. So, we're at a cost of the highest cost that we've got estimates for,

\$10 million per mile. That still puts us at \$33,000 an acre, okay, we're going to protect and save or stabilize or slow down and hopefully we'll prove that point so we can build shoreline protection in other areas.

1

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Another question that -- one question I have is when we see the Southwest Coastal Study Plan that's just been approved, we see shoreline protection that was involved with that plan to maintain and protect 21,000-plus acres over 47,000 square miles, we're looking at averages of cost of -- in benefits of, I want to say, it was 69,000 which is about where we are with mitigation. So, you know, there's a huge difference of what we see with these projects in the plan versus reality projects that we've seen taking place day by day. So, we're asking for shoreline protection to surely be placed back in no matter if it's the whole coast or at least look at the most severe areas.

The last thing I have is hydrologic restoration. We know that Texas implemented into the plan but it's still hard to understand for the local landowner to be

concerned with it. So, if we can at least put an icon map so it's not as confusing to know that basin could qualify and maybe give potential project being you have \$400 million.

So, I appreciate it. If there's any assistance we can do, we have knowledgeable staff at the refuge at Rockefeller and would be glad to assist in any kind of way with any projects in our area. Thank you.

MR. SPERYER: Thank you, Scooter.

I would like to acknowledge representative Mark Abraham.

Representative Abraham was able to come in just a few minutes ago. Thank you for being with us tonight, Representative Abraham.

So, next up, Ryan Bourriaque and then David Richard, you're on deck.

MR. BOURRIAQUE: This is Ryan Bourriaque,
Cameron Parish administrator. Glad to be
here. I wrote a few things down. Of course,
this is the first time that I actually write
notes limited to three minutes. I'm going to
try to be clear and concise.

You know, you go back to 2012 and you think about what was put into that master plan

and Cameron Parish at the direction of then parish administrator was Tina Horn and our police jury, we looked at our own process just like Bren talked about the state did. What can we do different? How can we improve where we are? We went back and put together our own Cameron master plan. We had drainage board members, landowners, fishermen, interested residents, elected officials, Federal and State agencies, put them all in one room eight, nine times a year, sometimes 60 people. Never got stabbed, punched, anything, you know. That's what you call winning, because we all have the same goal in mind. We wanted to protect and restore our coast; namely,

Our first little trial run at the Cameron master plan, we looked at the Southwest

Coastal Study, a study that had been around for a little bit of time but the Cameron master plan proved very valuable to us in not only organizing our thoughts, prioritizing our projects, but also illustrating what our concerns were both to the board and all the partners that were involved in the Southwest

Cameron Parish.

Coastal Study.

Thirdly, a little branching out. We knew we had to get engaged. We knew if we wanted certain aspects of the master plan to change, we needed to be involved in the framework of the development team meetings. We need to be involved in webinars, conference calls. We started at Cameron Coastal Day, let those individuals come and see the issues in Cameron with their own eyes. We feel that we have done a very good job of illustrating what our concerns are in Cameron.

Comments on the plan itself, first, the good things. Scooter get on it, hydrologic restoration, a programmatic measure is incredible to be included in this plan. It's vitally important to the people of this area to consider two, three, five pipe structures, even though they may not have been analyzed through this process, to look at those on case-by-case basis. We feel that Cameron, that is a true victory. The Calcasieu Ship Channel salinity control measure, an incredibly important project for our area, the marsh creation sites throughout Cameron

Parish, we still have some uncertainties about how certain sites were picked. We look forward to understanding a little more thoroughly how that took place.

Scooter hit on it, Gulf shoreline protection, not only Gulf shoreline protection, but in our instance, shoreline protection, the interior lakes, the GIWW, Sabine Lake. Again, issues that could be addressed over time, we would look forward to open dialogue as to why some of those issues weren't installed in the plan. Southwest Coastal Study, it would be great if there would be a reference to those projects being consistent with the state master plan. A lot of time and effort went into that process.

We'd also request similar to the

Southwest Coastal Study a reference to local
coastal master plans whether in the appendices
or in the text itself. It's vitally
important. The nonstructural aspect, the
parishes look forward to working with you.

Every dollar we can save in you not having to
elevate a home, we want it back and finally,
I'd be remiss if I stood up here and didn't

Page | 58

acknowledge the fact that there's \$30 billion of economic development going on in Cameron Parish today with another 27 billion planned. Okay? That's great. That's what everybody's talking about. You see investment going on in this parish, but you also see fishing. You see cattle. You see a top 10 citrus producer.

It's more than just billions of dollars of investment. It's my kids' seventh generation of my family growing up on the same piece of property. That's why it's important. That's why we support the plan and look forward to an open dialogue to make a few changes. Thank you.

MR. SPERYER: Thank you, Ryan.

Mr. David Richard.

Ms. Lori Cormier, you're on deck.

MR. RICHARD: First off, I want to support what Ryan said. He was only able to say a brief amount of a prepared talk. You will be receiving from Southwest Louisiana a coordinated list of comments in regard to that. I'm going to say some of the same things that you have heard me say for 40 years. So, get ready.

Is that No. 1, you talk about Barrier
Island, and the place that you can restore the
coast most is from Point au Fer to Sabine Pass
where we have a barrier shoreline. We're
looking at your plan that spends a huge amount
of money on Barrier Islands, but nothing on
barrier shoreline. What is the problem with
your understanding the difference between a
barrier shoreline and Barrier Island? We
actually have something to save here and those
barrier shorelines are terribly important.

And we appreciate what's been done. The project that was done between Cameron Holly Beach is immensely successful, from the same perspective that we need some rock there to keep it in place. You said you had new science, Bren, in regard to what we see and what works. What works on the intracoastal canal is we have about 25 miles of rock on the intracoastal canal that we put there. We've not lost an acre, but we gained an acre. We don't need a model to tell us that rock prevents erosion on the GIWW or on the Calcasieu Ship Channel or the Sabine Channel when we have a freshwater bayou that we have

to deal in Southwest Louisiana.

Again, I'm going to tell you, your \$50 billion, that's a nice arbitrary figure but it's exactly what it is, an arbitrary figure. I don't see what's the difference if you say \$50 billion, and we put in \$150 billion. I'm going to tell you that Cameron has spent immense amount of hours with hundreds of people to put together a plan that should be incorporated because when we go to Seattle or we go to whatever funding source we may have available, if it's not in your master plan, then we don't have a state match, and we really need that.

I want to bring to your attention on Page 86 in regard to some fallacies that are in there by a previous governor administration in regard to shoreline protection of Federal navigation channels. Your lawyers, the lawyers from Tulane, the lawyers with the State have said that the court does not have responsibility to shoreline protection on navigational channels. We don't have the money. We don't have the authorization. Then you say that we're going to do 25 percent of

the overall cost of your project to be shoreline protection. That, again, is an arbitrary number.

I negotiated the number when I was on CPRA. So, why should we still keep going with that. We have a different administration, we have a different time, and I really think we need to revisit that and I would hope that you would do that.

Just for the folks in Calcasieu, other than the Sabine -- than the Calcasieu Ship Channel plan, there's not a project in Calcasieu. They need to know that. The second thing is, in regard to the beneficial use, every piece of deteriorated marsh in Southwest Louisiana needs to be included in the area where we can do beneficial use. We've got lots of private money that's going to come here. We've got lots of mitigation needs. So, I would appreciate it if we can add all of those deteriorated areas and I made your three minutes. Thank you.

MR. MYER: Thank you, David. Lori Cormier.

Ms. Tina Horn, you'll be next.

MS. CORMIER: This is Lori Cormier with Calcasieu Parish Police Jury. First, I'd just like to say that Calcasieu Parish is delighted that the plan continues to support sound science-based decision-making and we encourage the State to listen to the needs of their citizens by taking into account the local input as the State did with the master plan 2012.

The Parish itself has some concerns about the nonstructural element for Calcasieu Parish being placed in the Phase 2 implementation and request that either all or portions of the nonstructural element be started prior to Phase 2. The parish supports the Calcasieu Parish Channel salinity control measures project and we recommend that the State secure the additional funding to move to construction as soon as possible. We also recommend that CPRA adds the language to the plan that the Southwest Coastal Feasibility Study be consistent with the master plan 2017 in the document. So, we want specific language in there that states that.

The parish encourages the State to judge

land building and land protecting on equal ground in the master plan. We also recommend that the State view the local coastal plans in Calcasieu, Cameron, and Vermilion, as viable products that are consistent with the master plan with the understanding that the projects are not fully modeled or yet vetted and Calcasieu Parish is working on a coastal plan of their own and it should be ready at any time. So, we'll get that to you as soon as we have it.

The Oyster Bayou CS-59 is scheduled to be completed in January of 2017. So, the State and Federal government will have spent about \$20 million in a 500-acre marsh creation project. The parish recommends what Bren called barrier shorelines -- I heard it twice. I almost fell out of chair, but at least the words are being used even though they're not being protected yet -- for the project as well as projects already finished by placing shoreline protection across all of Calcasieu Parish and Vermilion Parish or, as Scooter said, the most vital needed places.

One of the coast's 2050 strategy to

Region 4 was to restore, protect, and maintain all shorelines. Calcasieu Parish request the shoreline protection be placed as a multiple line of defense strategy for projects already in place as land-protecting projects.

Projects -- protection of these investments is vital to keeping all the restoration projects that have already been in place in the last several years. By sustaining the shoreline in Southwest Louisiana, you're helping to protect Lake Charles to the 500-year level as deemed necessary in the coastal master plan 2012.

What was said here in 2012 was rocket, rocket, rocket. I say that to you guys all the time. This is what the people want. This is what we feel we need. It's about maintaining the projects we already have put in place.

The parish -- we also ask you to consider protection of the Chenier ridges. The parish commends the staff. I know how hard you work, and for the extensive and public engagement as the plan was being drafted. We also thank you for your continued effort for the protection of Southwest Louisiana, for the coast, for its

citizens, and for its culture.

MR. MYER: Thank you, Lori.

Ms. Tina, you're next.

And then Ralph Libersat.

Real quick, Tina. I would like to recognize two Lake Charles City council members that just arrived, Ms. Tina Jackson and Mr. Stuart Weatherford. Certainly, I appreciate you being here with us this afternoon.

MS. HORN: Hi. I'm Katrina Horn. I'm a retired landowner in Cameron Parish and since I've been retired, I've been able to enjoy my home life a lot more and that is great.

One of the things Bren asked us to do was to say the things we liked about the plans.

Well, I'm going to start off by saying that I love the barrier protection on the eastern end of the state. I think those Barrier Islands are exactly what the Cameron Parish coastline is going to look like if we don't have shoreline protection in Cameron Parish. We will revert to what the eastern side of the state looks like. So, we need shoreline protection and it's really, really, really

common sense. It doesn't take a rocket scientist to figure out if you're going to spend \$500 million on a marsh restoration project, and also south of that, just pumping sand, I don't remember how much that project was, but if you're going to spend money pumping sand, then you need to protect that. I mean, who does that, you know?

I feel like I'm missing something. I feel like I don't understand something. I understand it's always about the money. I don't understand why you have to divide the 50 billion in half and use some for this and some for the other, why you can't use it on what's detrimentally needed.

Okay. I'm going to go on. Another thing I like about the plan is the marsh creation which we need for our seafood, fisheries. We also need those little marshes for the waterfowl and all our wildlife that lives in those marshes but again, if the shoreline is not protected, that marsh is going to be quick to go.

Also, the salinity controlled along the Calcasieu Ship Channel has been a problem

forever and we do need to take some control over it. Last I would like to say, that I do appreciate all your meetings and for allowing local input, because without this local input, you're just going by what you've seen in the past and, yeah, you've got some scientific data, but in Cameron Parish, we don't need the scientific data. We know what we need. So, come on out if you-all want to do some field trips, whatever but we've got to get on the same page here. Thank you.

MR. MYER: Thank you, Tina.

Ralph Libersat.

And Nedra Davis, you're on deck.

MR. LIBERSAT: Good evening. My name is Ralph Libersat. I'm with Vermilion Coastal Committee in Vermilion Parish, and that's who I'm representing today. I want to give special thanks to the CPRA in their efforts to come out here and really inform us of what's going on, again, to give us an opportunity to comment. I want to thank you all again for taking a special effort in getting some additional meetings through CRCO in Vermilion Parish and the coastal parish. I know this is

going to give us another opportunity to talk that away.

I think you-all heard our complaints, that I love Lake Charles, but -- I went to school in Lake Charles. Lake Charles is not in a coastal zone. Vermilion and Cameron is, and I appreciate you-all coming down here to hear other concerns. I appreciate the turnout tonight so we can hear everything.

The plan has a large number of effective projects both in restoration and protection.

I want to be upfront about that and say that they do have some excellent things in the plan and we don't need to throw out the baby with the bathwater but it definitely has some room for improvement.

One restoration feature that I'm sure you've heard from all the previous speakers in the Chenier plain that is obviously missing is shoreline protection, in particular, along Vermilion plain. I'm representing Vermilion Parish. We have a lack of shoreline protection on Vermilion Bay. It was there in 2012 and it was very vital and needed to be -- the parish is doing some efforts on its own to

get shoreline protection there.

The points that I want the CPRA to consider is that restoration should be our first line of defense, protecting what we have. Second line should be restoring some modifications from hydrological restorations. I agree with Scooter, that it's in the text, but we need an icon in there to show that it is a programmatic function of the master plan that needs to be recognized somehow.

And last should be our creation. You're creating it because it's already gone. In Southwest Louisiana, in south Chenier plain, we have opportunity that we have a very vigorous growth of vegetation marsh. We need to project it, so that in 20 years, we won't have this conversation that I need more marsh creation because I didn't protect it 20 years ago. That's what I feel we need to do.

Last but not least is that the funding opportunity. We're finally getting some restored dollars and dollars that have been long awaiting, but if this feature, shoreline protection is not in the master plan, we cannot cause share for all of those upcoming

projects we would like to stretch our local dollars further. So, an excellent shoreline protection project that have worked in Vermilion Parish, TV9, or coastal canal project, we would like to monopolize on the one or two areas in the state -- one of the two areas in the state that's actually building land.

We have the Atchafalaya basin putting sediments into the Vermilion Bay. We would like to put some more shoreline protection, and then have the marsh creation behind it. It's been proven with Cote Blanche area, it's been proven with the TV9 project. So, we would like that to do and continue. So, I made it to three minutes too. I appreciate it.

MR. SPERYER: Thanks, Ralph.

Nedra Davis.

Nick Dixon, you're on deck.

MR. DAVIS: Good evening. Nedra Davis.

I'm the executive director of the Chenier

Plain Coastal Restoration & Protection

Authority. I represent Cameron, Calcasieu,

and Vermilion Parishes. Excuse me, my voice

was cracking there. Some of the -- well, all of the issues that everyone that preceded me covered, basically, the Chenier plain authority met today and we're drafting a resolution from the Chenier authority board and essentially, I'm going to cover six points out of that resolution that will be forthcoming and will be sent to CPRA, as well as the parishes.

So, the first item, as the Chenier plain Authority recommends, that the CPRA add shoreline protection to the master plan. The second item is the -- we recommend that the CPRA add reference to the Southwest Coastal Study being consistent with the master plan. We need clarity within the document. The third point is we would like the master plan to acknowledge local parish master plans in an appendix as viable projects that could be viewed on a case-by-case basis in the future for funding, very similar to the 2012 process.

The fourth point is we'd like the -- even though hydrological restoration is a programmatic component of the master plan, we would like to recognize those components in

the mapping process, potentially the parish fact sheets so that people can understand on an easier basis what exactly is written, especially since Leanne Sharp just gave a presentation about the elevations in the Chenier plain being the lowest in the state and also it's obvious to residents of our parishes that, you know, with all the severe flooding invasion, that we would -- hydrological restoration is one of our top concerns with shoreline protection being the first.

Fifth point is we would like land building and land protection. We would like -- we recommend them to be on equal footing in the master plan. We understand that marsh creation is very important, but as everyone said before, protecting what we have is our primary goal.

My sixth point is we would like to protect our investment. As was mentioned, CS-59, Oyster Bayou, \$20 million has been invested so far; CS-66, Cameron Meadows; ME-20, CS-59, the TV9 and there's many other projects that can be referenced. We've spent

a lot of money, and we would like those investments to be protected.

On a personal note, I really appreciate all the hard work that's been put into the plan. We understand that the public process is very important and we know that you listen. I realize in the 2012 master plan, there was like 22 changes and several programmatic clarifications and we know that you listened to us and we're very glad that there's been more outreach and more public involvement in this plan. I want to commend you on the hard work and good job that you're doing.

MR. SPERYER: Thank you, Nedra. Nick Dixon.

Charles Atherton, you'll be next. Nick gets to go first. Let's go. Thank you.

MR. DIXON: Hello. Nick Dixon, and I'm representing the coalition to restore coastal Louisiana. CRCL is a statewide organization concerned with coastal land loss. I'd like to start off by saying that we commend the State for their continued efforts to incorporate the latest science and modeling into this effort of fighting coastal land loss but since we're

16 17

14

15

19

18

20

21 22

23

24 25

here in Lake Charles, we want to point out that we strongly support the prioritization of salinity control structures within the Calcasieu Ship Channel to address saltwater intrusion as a priority project, and that we also support the implementation of the Southwest Coastal study to reduce flood risk for the residents of the Chenier plain. recognize that we must balance the various interests to protect the people and economies of Cameron and Calcasieu.

That being said, we recognize that the underlying causes of land loss in the Chenier plain are different than those in the Delta plain, including saltwater intrusion and marsh. (inaudible)

So, we believe that it's critical that we invest in projects that restore the coast by restoring natural processes such as hydraulic restoration and living shorelines.

I want to kind of end this on a note, which was already mentioned, that we're going to be hosting something called a restoration road show where we're going to be talking with anybody who felt like they didn't understand

what was being discussed at this meeting and to maybe get some clarification, to continue that conversation with ourselves and other Federal, State, and local agencies. So, we'll be back in this region to continue this dialogue and in Abbeville, February 9th, and Cameron, March 2nd. I encourage all of you-all to invite your friends, family, and colleagues to come have that discussion with us. You can get more on that at CRCL.org. Thank you.

MR. SPERYER: Thanks, Nick. Charles.

Ray Freeman. You'll be next, Ray.

MR. ATHERTON: Charlie Atherton. I guess I'm representing the people that are no longer here, because when we started this process with these meetings many, many years ago that combined and wound up being what we have here today, those meetings, they started off with people telling you to rock everything. The people that are no longer here because they're gone, their dying breath was "rock the coast."

So, we really can't understand that maybe we're using the words for rock. Your

technical -- whatever word for rock the coast they used on the east end of the state, scratch out whatever and put that word in because we need our entire coastline rocked and protected. We support everything you got in the plan right after you rocked the coast so we don't lose what you're going to spend money to develop.

I know in the past when they opened up the floodgates, I think it was Atchafalaya floodgates, the satellite photos tracked the big plume of mud that plugged up the entrance to the ship channel.

So, Rodney Guilbeaux showed you years ago how to put the rocks to protect the coast and just do the whole coast like that. We would of blocked most of that mud that came when it was released. The most immediate pressing problem that we're having in this area in Calcasieu Parish is flooding. The only way rainwater or floodwater can leave is down the channel. Somewhere we're asking you guys to brainstorm and figure out an alternative route, if there's nothing but -- you just figure out how you're going to move floodwater

west of the river and east of the river into the freshwater marshes on the other side of the intracoastal.

When I was a kid, the rainwater here could just go around through the marshes to the Gulf. That's no longer the case. It has to go down the channel. Ideally, what we do is block out off the channel and put pumps because most of our drainage is tied up but here in recent years, it's critical. We're getting -- we're slowly -- because of the subsidence, sea level rise and all those other things, we're fast becoming like New Orleans.

So, right now we're still going to -- if you plan today, we're still going to miss the boat, because at same point, you're going to wind up having to put in pumps in a canal system or some mechanism to move the floodwater out of Calcasieu south and I would suggest dump it into the freshwater marshes where it would be of some benefit and also to be recycled or reused at some point.

Again, when I started this, I had brown hair and it was rock, rock, rock. I get the book and I look on the Internet and I'm not

seeing the rock. You need to understand we want the coast rocked from one end to the other to protect whatever it is that you're going to add. Thank you for your time.

MR. SPERYER: Thank you.

Ray.

was in 2012.

Jeanette Dubinin, you'll be next.

MR. FREEMAN: My name is Ray Freeman.

I'm the executive director of the Iberia

Parish Levee, Hurricane, and Conservation

District. First, I want to thank you-all for all of you-all's outreach and for all of the work that you've done on the 2017 master plan.

I want to thank you that at least our flood protection system is still in the plan as it

Now, the thing that I'm dissatisfied with and the common theme that seems to be running through tonight is shoreline protection or the absence of it and, you know, it's -- we should be protecting what is there first and then build out something else, you know. So, land building and shoreline protection absolutely needs to have an equal footing. You know, I just don't understand why we first have to

lose it so that we can put it back. Why don't we just stop it from being lost in the first place, you know? So, that's to me, a much better approach.

In our case in Iberia Parish, we have some situations where we are losing our coastline and we can't use -- unfortunately, we can't use rock for other different obstacles that exist. However, there are other shoreline protection methods that can be used and, in fact, you know, CBRA's participation you know that the demo projects that were placed on Shark Island, four of them were placed to compare their abilities to create land and two of them are still verifiable but if you look at Shark Island on Google Earth, you'll see they've reached their plan. Now if you see it from the satellite, it's there. Okay?

And that was just a shoreline protection demo project. So, these demo projects -- or rather these shoreline protection projects can help us to prevent the loss and to create some land. So, you know, it's real important that we have shoreline protection that works and we

think that we are on the cusp of some of those that may be able to be used like in our condition where we don't -- where we can't use rock. So, we hope that you consider putting it on an equal basis. Thank you.

MR. SPERYER: Thank you, Ray. Jeanette.

Stacy Ortego, you're next.

MS. DUBININ: Good evening. My name is Jeanette Dubinin. I'm with the Center for Planning Excellence which is a statewide organization that assists parish and municipalities with planning and implementation in their community and such falls under the nonstructural activities.

First off, I would like to commend CPRA on the development of a robust flood risk that provides a framework to implement nonstructural projects that have the potential to significantly reduce flood risks from storm surge. The detailed plan and actions and outlines and responsibilities for implementing nonstructural activities in Louisiana was urgently needed, and the draft 2017 coastal master plan addresses this need.

According to the 2017 draft master plan, the implementation of nonstructural efforts is the parish responsibility with the State provided assistance where needed for an application process. CPRA's research and experience working with parish and municipalities, however, has greatly informed a recommendation to CPRA that the flood risk and resilience programs application process be opened and available to the municipalities to implement nonstructural projects.

Many municipalities too may have the capacity and resources to implement nonstructural projects and with the CPRA's assistance could expedite these projects to fully reduce flood risk in their communities in a timely manner. Thank you.

MR. MYER: Thank you, Jeanette. Stacy.

John Foret, you're next.

MS. ORTEGO: Good evening. My name is
Stacy Ortego. I'm a representative of
Louisiana Wildlife Federation. First of all,
I'll commend the State on the hard work.

MR. SPERYER: Can you speak into the mic?

MS. ORTEGO: I look forward to listening to everybody's comments. Short people problems. I look forward to listening to everyone's comments as they continue and I'll also be at the following hearings in New Orleans, Houma, and Mandeville. I will be keeping our leadership updated on this progress, as well.

LWF has been concerned about our coast since the Eighties. We'll be following the progress of this plan and State's continued restoration efforts in addition to closely monitoring a legislature. LWF also works closely with the Mississippi River Delta Coalition as well as other partners and groups that have an interest in coastal protection and restoration. LWF has been supportive of the Calcasieu Ship Channel project and we're pleased to see that remained a priority in the master plan. The project is important for combating marsh loss due to saltwater intrusion from the channel and its completion is critical.

It's imperative that the State prioritizes projects with the greatest impact

considering our limited source of funding and we must develop additional revenue streams in order to implement as many projects as possible. LWF supports the master plan and the changes for 2017. We have a lot at stake. It's important that we have strong leadership and bold actions in order to protect our coast and the people, wildlife, and businesses that depend on it. This isn't just a plan. It's a source of hope for Louisiana.

Should we have any additional comments or suggestions, we'll be sure to have them submitted by March 26th. Thank you for your efforts and the opportunity to speak.

MR. MYER: Thank you, Stacy. John.

Rene Escuriex, you'll be next.

MR. FORET: Good evening. John Foret.

I'm a wetland ecologist currently employed by (inaudible) and Associates and thank you for this opportunity to speak. I want to let you know that as part of my job over the last 20 years has been to understand the previous plan, that I have to read and digest them and implement them as best I could. I wanted to

note and commend you guys for the continued work to improve the plan each time. Notice, and I'm guilty, this plan, I was so anxious to jump to Southwest Louisiana, I skipped all the first part and was totally lost. I'm scratching my head, backed up, read it, and I really appreciate the level of effort that's gone into it thus far.

This plan, above all the other two plans, has been involved more dynamic and across the board, look at coastal restoration and types of projects. Great job. As you've heard already, and I'm going to echo again, there's been a few spots that were missed, but overall, it's hitting the mark. It continues, I think, in the future will be even better on the next plan. I'm particularly impressed with marsh creation areas. As a habitat guy, I know that the need for the bugs and the bunnies of the coastal zone, and we don't get it without habitat. So, any way we can create and/or protect should be high priority.

I'm also of the opinion that the saltwater protection plan along the Calcasieu Ship Channel is of high importance. Why?

Page | 85

Because then we can relax or begin to relax, potentially, the perimeter plan which allows, what, more bugs and bunnies into the habitat and that increases yield. That's kudos.

That's good.

I do have one concern, and that concern has to do with shoreline protection. I had the honor to spend 12 years working on a shoreline protection project shoulder to shoulder with the State of Louisiana to look at Rockefeller Refuge. Historic erosion rates were 50 feet a year, as evidenced by Mr. Trosclair's presentation, that's a bit dated. Even during the 12 years of implementation of Rockefeller, we noted shoreline erosion rates an excess of 150 feet. So, it's accelerated. What use is it to build interior marshes if we're going to allow the exterior perimeter to be eroded and affected?

The Rockefeller Refuge project is funding 2.5 linear miles. It's just a small fraction of what's needed in this part of the coast, and I encourage you to please look at those plans, please look at these recommendations and see if you can't put shoreline protection

1 back. Thank you. 2 MR. SPERYER: Thank you, John. 3 Rene. 4 Johnny Desormeaux, you're next. MR. ESCURIEX: Good afternoon. This is 5 not a criticism. This is just an observation. 6 The other public meeting has live loud music. 7 8 MR. SPERYER: They're having a lot more 9 fun than we are. 10 MR. ESCURIEX: I think this is very 11 important, and my name is Rene Escuriex. 12 with C.H. Fenstermaker, also on the Chambers 13 Southwest Environmental Affairs Committee. 14 Although I do not have an official resolution 15 from them, I think I share the same sentiment 16 as everybody on that e committee that we're 17 deeply concerned about our coast, not only 18 from an environmental standpoint, but from an 19 industry standpoint because it does protect 20 our coast on our viable and vital 21 infrastructure there. 22 I would like to echo the sentiment of all 23 the previous speaker with the exception of 24 this gentleman going from brown hair to gray.

I haven't quited reached that stage.

25

Nonetheless, I want to congratulate CPRA and the progress that you made from the 2012 to the 2017 plan. It is very well developed, and we are well pleased with the incorporation of the advances in science and technology. I'm taking meetings like this into account and some of our comments.

We are pleased with the diversity of the plan restoration approaches and the projects. Again, I want to express my concern about the lack of shoreline protection in Southwest Louisiana and ask that this be included in the 2017 plan, as this is first line of defense without which, any marsh creation measures could be compromised or short-lived. As one of your core principles in the original presentation that was given by Mr. Haas, building and maintaining land and shoreline protection achieves that.

Thank you for the great work that you're doing.

MR. SPEAKER: Thank you, Rene.

Johnny?

Bobby Aguillard, you're next.

MR. DESORMEAUX: Thanks for this

opportunity to speak. I am Johnny Desormeaux, just a private citizen, a lifelong resident of the area. I'm retired. I worked at the Conoco docks. I was an operations supervisor in Conoco docks. So, I'm very familiar with the economic impact of the ship channel.

Being an outdoorsman, I'm also very aware of the damage caused by the ship channel.

Since ship channel had been built, it's actually destroyed thousands of acres of freshwater marsh in Cameron Parish. I guess in the Sixties, they decided to build locks --- Calcasieu locks on the intercoastal canal and saltwater barrier because they were seeing damage 25 miles up at the Calcasieu River killing trees or whatever. So, that's two structures that they built early on to try to mitigate some of the damage that was already occurring in the Sixties.

You know, back at that time, I called Bass, just north of Hackberry right now it's just a saltwater mud flat, pretty much all it's good for.

In the plan -- I got here late. I didn't see all the plans, but it looks like there is

a lot of barriers that would be up and down on the Calcasieu ship channel. So, once all of those are built, then you're going to have to maintain the saltwater barrier, maintain the Calcasieu locks, (inaudible) Cuts, East pass, West pass. We have all of these structures to maintain.

So, when the hurricane comes through, I just, you know, think about the money that's going to be required to hold -- to rebuild all of these structures. There would be a lot of maintenance involved.

I agree with some folks who said that the -- you know, protect the cheniers because we're kind of unique here. We're different than the east part of the state where all marshes are open to the Gulf. So, we have cheniers.

In the 2012 plan, they showed a structure across Cameron, across the ship channels to put a barrier there across the ship channel.

In this plan, I guess, for some reason, that's not there. So, I really would like to understand the thought process on why we got rid of that structure.

Recently on TV, I saw where, you know, ship channels divides East and West Cameron Parish, and some businesses in Cameron were having trouble getting to the western part of the parish because the ferry is out. There's always -- you know, it's a rinky-dink ferry and it's always broken.

So, if we build that barrier across the ship channel and incorporate a bridge into it, then you will be killing two birds in one stone. You would be eliminating the need for all the structures all over the parish, and then you will be providing transportation from East/West Cameron so that with all this economic impact happening in the area, Cameron Parish could flourish a place to cross right there. Anyway, that's all I have.

Thank you.

MR. SPERYER: Thank you.

Bobby.

Up next is Callie Profit.

MR. AGUILLARD: Hello. My name is Bobby Aguillard, and I'm a third generation of commercial fisherman, as well as I enjoyed fishing with rod and reel and going to

different areas of Cameron. My son is going to be a fourth generation fisherman, and this is what I'm here, to pass it down to him, and from him, pass it down to his kids later.

I grew up in Cameron Parish all of my life. When we noticed the rock structures going out in the Holly Beach, we thought, "Wow, what an awesome idea."

But they didn't finish it. So, with that, I myself has seen over the years the beach get closer and closer to the road and the road at some point when you were driving over it, the land had just fell away from the road. Parts of the road was just asphalt at some places.

So, I would like to thank you all for letting us to voice our opinions, and if you could put more rocks there to where we could save that area, because that's what we need to saved. Holly Beach to Cameron Parish residents, it's our riviera and hopefully is that the rest of Louisiana. We would love to save that.

We would like also to thank Chenier for their project they have in the lower Calcasieu

1 Lake. My dad and I were able to oyster with 2 other oystermen by there, and we did notice 3 that that is working. There's a lot of things 4 working there, and it's a good thing for us 5 and it's a good thing for our families and our 6 kids. So, thank you-all for that. 7 But I please ask you to change and put 8 the shoreline protection into the Cameron 9 Parish area. It is where we need it, but 10 also, as far as we can, down the whole coast of Louisiana, do what we can to get that but 11 12 Cameron Parish, we surely need it and would appreciate it if you-all would put that into 13 14 your 2017 plan and thank you-all. 15 MR. SPERYER: Thank you, Bobby. 16 Callie Profit? I might be messing that 17 one up. 18 Mark Shirley, you'll be next. 19 How bad did I mess it up? 20 MR. PROFIT: You got it right. Hello. 21 My name is Callie. I am here with Citizen and 22 Conservation. 23 My statement is that hydraulic 24 restoration is a necessity in our age of

environmental design with the help of the

25

land, the animals, the plants, the water, and 1 2 the people. 3 I was born and raised as a Missouri farm 4 girl. I have lived, loved, and worked in 5 midwest streams, rivers my whole life. From my experience in the field and the evidence of 6 the pollution indicate that it must be 7 8 accepted, addressed with passion, grace, and firm consideration of real change. 9 10 An example of common frustration, cattle 11 farms are a way of life and a way of 12 pollutants in our water system along with the 13 pesticides. Action must be taken. More than 14 Louisiana is at stake. 15 I want to thank you for your time and for your efforts. 16 17 MR. SPERYER: Thank you. 18 Mark Shirley? 19 And then up next, Guthrie Percy. 20 MR. SHIRLEY: I'm Mark Shirley. I'm an 21 extension agent with the LSU AgCenter in 22 Vermilion Parish, also a resident in Vermilion. 23 I want to just commend some of the other 24

comments that were made earlier about

25

shoreline protection that David and Scooter and the rest of them made, and I got a couple of things I would like to point out.

One is the fact sheet idea is really good to have some for each parish to give out. I did notice in the Vermilion Parish, as far as economic progress, the agricultural economic is not listed here. Just fishery, seafood industry and service oil and gas. So, be sure to put agriculture in there.

And if ag is not considered in some of the analyses to justify different projects, then maybe you need to look back and make sure that all the projects are necessary, such as shoreline protection are in there to protect agriculture community, so, shoreline protection Vermilion Bay, as well as along the Gulf Coast.

Mermentau Basin was set up many years ago as a freshwater system. You have locks on both sides, the east and west, as well as on the south side of Rockefeller to protect the freshwater basin. So, shoreline protection, again, is going to protect that basin, but also maintain the shorelines of those

channels, the freshwater bayou channel that needs to be maintained and protected so that all freshwater system is protected which impacts agriculture in Vermilion, Acadia, Jeff Davis, Calcasieu, on up.

In the flood risk slides that you showed, it had the possible storm surge getting inland pretty far. Did that include -- in the 30-year event, did that include the possibility of also rainfall? If that's just storm surge, if you add in rainfall, then the impacted area needs to be extended all the way up beyond I-10. So, it's not just the lower portions of Vermilion Parish, Iberia Parish, If they get a foot or two of rain, that's -- the water is not going to be able to flow down. So, you can actually add in another color to say that in a 100-year event, that possibility of flooding is going to extend all the way up to I-10 and beyond.

And just one last thing, a lot of time and effort, a lot of people here in Southwest Louisiana went into that Southwest study, and I would like to see the master plan consistent with the Southwest Study Plan to kind of turn

around and say that all the projects in the master plan are going to be consistent with the Southwest Study.

Thank you.

MR. SPERYER: Thank you.

Mr. Perry?

MR. PERRY: Hello. My name is Guthrie Perry, and I was with Louisiana Wildlife and Fisheries for a number of years, and had the a pleasure working with a lot of these people that are here today.

When I first went down -- I was program manager with Wildlife and Fisheries down in Rockafeller. When I first went down there, Ted (inaudible), Bob (inaudible), Oscar Sturlese, and went out near the beach put a pilon down. They move another 100 foot in put another pilon.

Several years later, Ted, Larry McNeese were working this up and said you're losing 30-foot a year to this thing, and we didn't have fancy equipment to what they have now. And, in fact, what we do is some land logs we have a map, and we cut out, balance it, way to compare it over here, you know. It worked

1 that out. I'm certain we didn't have a GPS.

Later on, we did get some things going, and in about 1993, '94, the recreation center in Grand Chenier, we brought up -- Larry McNeese and I brought up shoreline erosion. "We need some rocks down here. We're losing this 30-foot a year, 100 acres," and we wanted in rocks.

And what was said, "No. We're going to have a study, Phase 1 and 2, study.

Development and all that."

And they said, "Waste of time. Look how good it is over at Holly Beach."

Well, fortunately, when Shannon Mosley came in and do their study, they were the boring samples which were very identical to what Mr. Louis Nichols did in the Fifties with a hand auger. It's similar. Take two hundred rocks needed, 200 psi, to stay up. That beach out there was about 30 to 50 psi. So, now the stuff they're doing in Oyster Creek and all these other things is working.

I'm glad John Foret mentioned the fact of the work he's done down there and I'm surprised too to see that shoreline protection

wasn't included right now at Rockefeller.

Another thing that David mentioned, the lack of projects in Calcasieu Parish, that is very important. We need it up here too. So, I just want to close that while I was at Rockefeller, we lost 4,500 acres of Rockefeller refuge to the Gulf of Mexico.

Thank you.

MR. SPERYER: Thank you, Mr. Perry.

I don't have any more cards for someone who has requested to speak on the record tonight. So, let's see if anyone raises their hand.

What we will now do is go into the second portion of today's public hearing. You just heard a lot about the master plan, 50-year outlook on that. I'll ask Michael Ellis, executive director of CPRA, to come up and present the 2018 annual plan.

Same sort of process, Folks, if you want to speak and provide an official comment on that document, we ask you to Bren in the back and folks around the room and complete one of these yellow sheets, fill it out, hand it in, and then we will call on you at the conclusion

of this presentation. Mike has promised it's going to be short.

MR. ELLIS: Thank you. Am I on a three-minute time as well here. Yeah. Hopefully the annual plan will provide some information that's pretty beneficial to you, guys.

First off, my name is Michael Ellis. I'm the executive director for CPRA implementation group, and I appreciate this opportunity to be up here. This is my first round of actually annual plan and master plan meetings, and I think it's important for me to be here because I get to hear. I get to hear from the folks closest to the situation. I think that's going to help me going forward in important informed decision. So, I appreciate you-all's input. I appreciate you-all coming out and taking the time. I can definitely tell how important all of this is to you, guys.

MR. ATHERTON: Is this the part where the rock is?

MR. ELLIS: Is that what's important to you? I think we got to that earlier.

But I do -- I'm almost a year at CPRA.

One thing I like to call out is the folks that actually run the organization with me. It's a tremendous group of people. A lot of them are here today. If you-all don't mind standing up so we can see how many people we have from CPRA to support this and they not only consider it as a job, they're very passionate about what they do. They spend a lot of time talking about it. They want to talk about it. They want to understand it. They want to get better with what they do. So, I appreciate their efforts.

So, I'm going to go into a little bit about the master plan, and kind of the difference is, if you will, sometimes it gets confused, and I know I was also confused when I was on the outside, the difference between the master plan and the annual plan.

The best way I consider looking at it is that the master plan is really a science-based plan. It's built on great science, and you-all heard a lot about it.

The annual plan is really about the numbers in the schedule, how we're going to do it. So, we're mandated every year to put out

an annual plan. This is the ninth one since 2010, and what I'm going to be discussing is the fiscal year '18 plan.

A couple of things that the plan requires us to do. It requires us to set a three-year budget or expenditure plan. It really -- it nails down the projects that we anticipate having funds for and building -- or planning and building, as well as schedules associated with that. That's the implementation projection.

And we take a look at the annual plan as best we can and assess the projects that we've done in the past. So, that's really what the annual plan does, but for me, more importantly, it allows me the opportunity to look at the next three years, how do we plan to plan, design, construct, and operate and maintain and learn from these projects that we're building.

Some of the milestones I won't go in to too much detail. I think Bren discussed it in a little bit more detail, but what's important up here is, obviously, on the third. The drafting of the plan was released to the public. We're here tonight, and we have a series of projects -- I mean, of hearings over the next couple of weeks. The important day to me is the 03/26/17. That's when we -- you know, we want to hear from your comments tonight but also, that's when we're going to close the comment period on the F.Y. '18 plan.

So, in summary, you know, Bren did a good job, and obviously, everyone's aware of the '17 master plan. So, we're working side by side with the plan to develop the '18 annual plan but more important than this is from the F.Y. '17 annual plan to F.Y. '18 annual plan, we've had som uncertainties. You know the settlement of the oil spill was last April. So, we know we're going to start receiving a substantial amount of money starting in April of '17.

So, that's allowing us to provide a little bit more certainty as to how we plan our work. So, I'm going to a little bit of detail of that over the next couple of slides, but what I'd like everyone to do -- I know the master plan is very important, but it take some time to look at the annual plan, make

some comments because that's really, really -if you say the rubber meets the road, that's
really where the rubber meets the road,
implementing these projects. So, I can't do a
justice. It's a lot of information. So,
please take some time to look at it.

What else is different? We're building bigger projects, more complex projects. So, you know, out east you hear about the diversion but out west, we talked a little bit about the Calcasieu project. That's a very complex, very important project to us. We're happy that we have funding to move forward for that.

We always talk about adaptive management, and what is adaptive management? It's more than lessons learned. People say it's lessons learned. We -- and you're going to see a ramp-up in adaptive management in the coming years. What that means to me simply is we want to understand how to get better. We want to understand how to input things that we see out in the field or the things we see during construction or design and put that back into the process to get better with what we're

doing. So, as we move forward to '18 and outer years, we're going to do -- we're going to do more robust adaptive management. I think that's very important.

Another thing you'll see in '18 is we're going to be completing some of the older programs, the CF program, the sunset in the August of 2016, a couple of the prime programs. I'm going to show you some charts that you're going to see that those are kind of winding down, but we also -- we have some good news. We have some funds that will be ramping up over the next couple of years as well.

A little bit about our funding sources, and I won't go in too much detail other than we do have money coming in, but we have -- we have a lot of opportunities, if you will. So, we do have limited resources. We do have to make tough decisions at many times. In many cases, some of these funding sources have restrictions that we can spend the dollars on. So, I'm not going to go into a whole lot of detail other than in the annual plan, there's some really good explanations of where we can

spend the money, how we can spend the money.

So, one thing I do want to point out is that from the state revenues -- and that primarily operates the implementation business, and we also do some -- basically, we forward some money for grants and, the matching program. It's usually, we anticipate -- it's based on oil prices, and we usually around 25 to \$30 million a year. This year, the next couple of years, we're in the estimating around 14 million. So, we have a lot of work to do and, in many cases, a lot less funds to operate.

Some accomplishments of these in the '17 -- in '17 plan as well. I won't go into too much detail, but we had -- we already -- we have 11 -- in 2016, we completed 11 projects worth about \$330 million, and it benefited around 3500 acres.

Ongoing in construction, we have
29 projects currently going on, and we're
moving forward to a -- and I think that we -we're looking at benefit in around
20,000 acres in March, and it's around
\$5.5 billion. So, we have a lot -- a lot of

work we've done in the past, but there's a lot of work going on right now. As you'll see in a minute, we have a lot of work being planned as we move forward.

So, this is the table -- you can think this is Section 4 of the annual plan, as well as the executive summary. This is our projected revenues. There's a lot of information on this table and one thing I want to point out, and if you can see right here, the trust fund, that's what we talked about earlier. This is primarily how we operate our business, and we've -- historically, I got around 25 to \$30 million. So, you can see that's a tremendous impact from us. At the same time, you can see that some of the oil spill dollars are starting to come in, and so, we expect those revenues over the next three years.

Then also, I told you a little bit earlier some of the programs, like CDG is going away as well. What this revenue represents is \$2.5 billion over the next three years that we anticipate moving forward.

So, if you have any accountants in the

room for -- if you have a revenue, you must have expenditures. These are the expenditures. I won't, like I said, go into a whole lot of detail, but it -- this represents quite a bit of work over the next three years. So, I encourage everyone to spend some time and look at that and comment on that. We'd love to hear what your thoughts are.

This slide just depicts the previous expenditure graph. What's important here is, obviously, we spend quite a bit of the money on the construction sites. At the end of the day, you know, that's what we want to get at and -- but in previous years, you may not have seen as much engineering design, which is encouraging to me, is this engineering designs were able to kick off because some of the oil spill dollars will turn into construction in subsequent years. So, that's just a way of kind of us to look at and weigh at how we are looking at the projects moving forward.

This is the schedule. We scheduled out all of the projects for the next three years. This is how we schedule them. There's planning, there's design, there's

construction, there's -- so, one thing to point out to these folks out here, which is a very important project to us, is the Calcasieu Ship Channel project. So, as you can see, it's currently under design, and, you know, we -- it's funded by RESTORE. This is how we manage our work. So, we schedule. This is how we know if we're getting behind, how we track ourselves. So, this is part of our implementation plan.

We also track our programmatic expenditures over the next three years. These aren't necessarily projects. These are overarching programs, if you will, that support our project. For example, the Beneficial Use Program. You know, we obviously tend to continue to fund that but what's important to note right here on this, this fiscal year '18, is some assistantship to levees, as well as restoration partnerships.

We're not anticipating '18 with new programs. There's some existing programs that we're going to continue to fund in the '18.

However, because of what I spoke about earlier, our reduction in oil spill -- I mean,

in our mineral trust dollars, were unable to fund some of those programs. However, we're looking at possibly funding the GOMESA, and GOMESA comes in in 2018, '19 time frame to pick up some of these programs and obviously looking at restoring other opportunities. So, they're very important to us. However, because of some of the shortfalls that we've experienced, we're behind. We had to look at ways to reduce.

This very complicated expenditure graph is for adaptive management. What I wanted to put it up there for when there's quite a bit of work, that's going to be going into adaptive management over the next three years. It's very important to us, and that's where you can see a tremendous ramp-up as far as the dollar spent in support of our programs and projects.

Lastly, this is basically how we operate.

This is our operating expenditures. As you can see in the first -- last CPRA, that encompasses the implementation staff of around 165 people including our field offices.

That's salaries. That's vehicles. That's

overhead. That's, you know, keeping our building lights on and et cetera.

23

24

25

As you can see, that stays pretty steady, and what I spoke about before, about our, you know, operating cost from mineral trust going down, you know, we, obviously, still maintaining a certain level of staff and -but what -- another thing that's important about that number, \$23 million, roughly, I think it represents about 4 percent of our overall budget. So, we're a very lean organization. We pride ourselves with that. As you can see, a lot of these folks here, they're going to be traveling around the whole state. They're spending their evenings -they're -- we don't have a lot of people. So, please take that into consideration when you say that we're not out here enough. We're trying to get out here as much as we can, and we'll never turn anything down. That's one thing that we're very proud of.

So, one other thing that I want to point out is this number here, \$23 million, if you look at -- when I spoke earlier about how we operate the funds that we're getting is being

reduced -- has been reduced because of the oil price, we're able to offset this number by basically program -- I mean, our staff is working on the project, working on the program that's funded through different source, whether it's -- they're able to charge their time back. So, that's -- so, we're trying to be -- we're as efficient as we can about charging time back to the projects, reducing our overhead costs.

Really, that's pretty much it. I hope I didn't keep you-all too long. I appreciate it. Same thing, I guess. Nick, you're going to come up here and let me know if you have any comments. I hope you have some, but if not, I hope to see some of you soon. Thank you-all very much.

MR. SPERYER: Thank you, Michael.

Again, we're happy to take these comments. At this point in time, I have not received any forms to provide official public comment here on the annual plan. So, we're not going to keep you.

Ralph?

MR. LIBERSAT: Yeah. I would like to

comment.

MR. SPERYER: Yeah. Come on, Ralph. State your name and who you represent.

MR. EDWARD: Ralph Libersat, Vermilion Coastal Committee.

Mike, I want to commend you on presenting something on budget numbers, you know, after a long meeting. So, you did make it interesting. I caught a couple of things. So, I hope you don't feel too bad.

Basically, on the revenues versus expenses, one of the big things I saw different from last year to this year was the payment. You put it in the revenue column, and I understand why, and explained it to me, basically, how we going to do that. it's a little bit of a voodoo economics, and I would like you to just call it what it is. It's going to be an expenditure.

Jim, I want to commend you for your great efforts. I know we're going on a lot of stuff here with the congressional district to try to get that waived. I would encourage you to do that but let's call it what it is. It's going to be an expense. It's going to be in a tune

of \$98 billion per year that we're going to 1 have to pay for this hurricane protection in 2 3 New Orleans. 4 Now, our GOMESA funding is probably about in the tune of about 143 million per year on a 5 good estimate. So, we're going to be left 6 with \$40 million to do restoration efforts. 7 8 We need to take that care of, and we need to 9 call it what it is. It's an expense. Let's 10 go ahead and put it there and let's not just hide it. 11 The only other thing with the funding for 12 the levee districts, I saw that a million 13 dollars a year, I believe, is what it is. I 14 15 don't remember exactly but I wanted to ask a 16 question: Is the Chenier Plain Levee District 17 and the Iberia Levee District included in that 18 figure? MR. ELLIS: We were digesting your first 19 20 part. 21 MR. LIBERSAT: I must slow down. I got 22 three minutes. 23 MR. SPEAKER: MR. SPERYER: Ralph, we can certainly 24 25 chat off-line to answer your questions.

this for your official comment, and then we can follow up with questions and clarifications.

MR. LIBERSAT: Okay. If it's not -- and I don't think it is. My point, I was going to make this that Chenier Plain and the Iberia Levee District are operating at handicap because they don't have the mileage that the other districts do to do the basic services. It costs them an arm and leg, as you know, just to get a ballot -- you know, to get something on the ballots so they can't get funding to do this. If they don't have the funding to do -- to advertise that, we're operating always in a hole and playing catch up, and we're begging and robbing Peter to pay Paul. So, it's very difficult for the Chenier Plain District to do that.

MR. ELLIS: Yeah, I apologize to you,
Ralph, on missing your second question. We
were flipping through the tables, and I think
we might need a little bit more clarification
on where you're seeing the GOMESA, the
100-year payback -- or the 30-year payback, -excuse me, is listed as a revenue and not as

an expenditure. I'm looking at the chart 1 2 here. 3 MR. LIBERSAT: It's in the revenue chart 4 or did I misread that? MR. ELLIS: According -- in the draft 5 plan that we have in front of us, it's listed 6 in the expenditure chart. So, I don't know if 7 8 it's in the -- on the PowerPoint. 9 MR. LIBERSAT: Can you flip back a couple 10 of slides on that? 11 MR. ELLIS: Yeah. We can --12 MR. LIBERSAT: Okay. All right. is -- and I apologize for that comment, but I 13 14 thought it was in the revenue column. 15 MR. ELLIS: Oh, okay. I see what you're 16 talking about. We can chat off-line. I 17 understand. 18 MR. SPERYER: Okay. Thank you, Ralph. Any official public comments on the 19 20 annual plan? 21 Look, we have mentioned it a few times, 22 you've got until March 26th. Your comment online or in writing, it's just as good as the 23 24 comments that we heard here today. 25 you've also seen our commitment to really work

with you. We heard a lot of comments today.

The good news to all of you is when you look at the appendices in the final plan that gets produced and submitted in April, the conversation that we have tonight will clearly be documented. So, be patient with us as we work through this public comments here.

I would also like to say, doing a Facebook Live, we had over 800 people join at some point in time to watch some portion of the presentation. It's amazing what we're able to do with technology to try to reach more people than was just here with us today here in Lake Charles.

So, with that, we'll let you go, and drive home safe. Thank you for taking time this afternoon. We'll see you soon. (Whereupon the proceedings were concluded)

MR. SPEYRER:

We are here for the hearing for the draft for the 2017 Coastal Master Plan. I will sort of walk you through the agenda for this afternoon. First, I am going to ask Chairman Johnny Bradberry with the CPRA, the Coastal Protection and Restoration Authority here in Louisiana to say a few remarks. After those remarks, Bren Haase will then come up and provide about a twenty-five minute overview presentation of the draft 2017 Coastal Master Plan. At that point in time we are going to stop the presentation and we are going to allow the public to provide public comments on that document.

At the conclusion of those public comments we will then ask Michael Ellis to come up and give a presentation on the fiscal year 2018

Annual Plan for CPRA. And then we will take public comments on that plan. So we are here as long as we need to be and look forward to the presentation as well as the public comments we are going to hear.

So with that I would like to introduce and welcome Mr. Johnny Bradberry, chairman of the

1 Coastal Restoration Authority.

MR. BRADBERRY:

2

Welcome and it is good to see everybody 3 It is good to be here. And you know 4 5 this is the second meeting that we have, the public meeting that we have regarding the draft 6 7 plan for 2017. And we welcome your comments. 8 I mean, you know, we are mandated by law to 9 have three public meetings. We are going to have four and then we're going to tag along 10 with other meetings to try and make sure we get 11 a good cross section of what you think about 12 13 the Master Plan. So tonight I would really like for you to be engaged. We welcome these 14 15 comments. We have incorporated comments already from the public, but this is just 16 17 another avenue for you to voice your opinion, 18 and your thoughts, and your desires, and your 19 wants. Whatever you want to call it as it 20 relates to the Master Plan. So, again, I encourage you to do that. This is a great 21 forum to do that in. Good and bad in terms of 22 23 what you like and dislike about the plan. 24 hey, if we can't take the heat then we will get 25 out of the kitchen, so to speak.

- I would like, before we go any further, I 1 would like to recognize some public officials 2 Representative Chris Leopold is here. 3 here. Chris, good to have you here. Thank you. 4 5 have several officials from the FICUS Council. Amos Cormier, President of Plaquemines Parish. 6 7 Charlie Burt, Councilman. Charlie, there he 8 is. And we have Audrey Trufant-Salavant, 9 Council Member. And we have Matt Ram from the Port of New Orleans, and thank you Matt for the 10
- 12 that I might have missed? Now you can beat up

second meeting. Any other public officials

14 MR. TEMPLET:

11

13

18

19

20

21

22

23

24

Council Member Ricky Templet from
Jefferson Parish.

on the Council Member. Yes, sir?

- 17 MR. BRADBERRY:
 - Ricky Templet. Anyone else? Now you can beat up on the councilmen and the representatives if you want to, as opposed to CPRA. Just kidding. Again, I would encourage you to be engaged tonight. I have every indication that you will. This is, you know, we provided your public comments. I just
- 25 wanted to make you aware make it known to

1 you that this is not a debate, you know, we are going to hear your comments, we are going to 2 take those in, we are going to acknowledge 3 them. We are going to take them back with all 4 5 the other comments that we have from our meetings and we are going to rationalize what 6 7 should change in the plan. But tonight we are 8 giving you the opportunity to speak. We won't 9 sit up here and debate with you. Of course if we did there is a lot of white cards and we 10 would probably be here all night. 11 So the 12 format here is listening to you, we are going 13 to actively listen. We will take those comments back again and will work them. 14 15 again I welcome you, thank you for being here 16 and let's have a good show. 17

MR. SPEYRER:

18

19

20

21

22

23

24

25

Thank you Chairman Bradberry. I would like to ask everybody in the aisles, you've got to go on and sit down. No one is allowed in the aisles for fire code purposes. There is plenty of seats down here in the front. We ask folks to please scoot in and accommodate and we are going to get everybody into the seats.

Next up will be Bren Haase, Chief of

Planing for CPRA to give a presentation on the 1 Coastal Master Plan. I would like to welcome 2 3 the two hundred plus here today, but I would also like to welcome the audience we have on 4 5 Facebook. This is the second meeting in a row that we have decided to live broadcast these 6 public hearings, really in an attempt to 7 8 provide more access to the citizens across this 9 coast that care so much about the place they call home and care so much about this master 10 plan. Last night we had a little over 1,500 11 12 views, so we will see how the New Orleans 13 meeting does in comparison to that. Without any further ado, Bren Haase with the Master 14 15 Plan.

MR. HAASE:

16

17

18

19

20

21

22

23

24

25

All right. Thanks, Nick. Thanks Chairman Bradberry. I appreciate the introduction. And man, what a turn out. This is fantastic. It really goes to the first point I would like to make as we move into this presentation, you know, and that's that, you know, we are all here for one purpose, I think. And that's a, that's a good thing, that's a beautiful thing for the coast of Louisiana. We all want to do

the most good for most people that we can across our coast. And I think the turnout here tonight is certainly evidence of that. Ι and again, this is just a tremendous, and a strong forum, and a good showing of this part of the region in terms of, in terms of that. So I want to thank you all for being here, I appreciate your time. And without further ado we are going to get right into things.

We work for the Coastal Protection and Restoration Authority. Excuse me. We are roughly a new State agency formed after the hurricane season of 2005. We have a pretty strict core mandate. That mandate is to develop, implement, and enforce a comprehensive Master Plan for coastal restoration and hurricane protection in the State of Louisiana. We want to restore our coastal ecosystem and we want to protect our citizens from the risks associated with hurricanes and tropical storm surges. That is relatively straight forward.

We know we are doing this in the face of an ongoing crisis, we are certainly facing a crisis here in coastal Louisiana. You can see that depicted here on this map. This is a map of historical land loss dating back to 1932.

2 The red on this map represents loss and the

3 green on the map represents gain. But you can

4 see on the map we lost about 1,900 square miles

of our coastal wetlands, again, dating back to

6 1932 time frame. That is an astonishing

7 amount. And looking forward - the predictions

8 don't, you know, are trending in the same way

9 if we don't do anything about that land loss.

10 So we've got a fundamental problem facing the

11 coast of Louisiana from the land loss and

12 that's something I think we are all aware that,

that needs to be addressed because it affects

all of us and our communities, and how we make

15 our living, and so forth.

14

16

17

18

19

20

21

22

24

So along those lines, and certainly we think Louisiana is worth saving. We are a national treasure if not an international treasure. And you can see under the stats listed here. But of course too many people live in coastal Louisiana and I'm not going to go through in terms of trades and ports.

23 Certainly we're looking at the Port of New

Orleans. It is immensely important, not just

25 to Louisiana and New Orleans but to the nation,

and internationally as well. In terms of our ecosystems services, our water fowl production, and fisheries production, and so forth we are second to none and certainly worth saving.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And we are making investments in our coastal economy. And just a few of those I'm pointing out here, starting out in the west, over \$100 million dollars has been invested in the southwest part of the state over the last several years or so. You can see the impact that has as it relates to jobs and revenue. Port Fourchon, I think we are all very familiar with, and certainly in terms of its support of energy production for the United States. immensely important, and you can also see the five new jobs established for every job that's developed as in - at Port Fourchon. And of course, again, as we were talking about the Port of New Orleans and the transportation system that is associated with the Mississippi River. You can see what the impact of the potential deepening of that river might have on this region, and certainly in the country. And we believe we are worth fighting for. We need to save these areas. We need to do what we can to, again, restore our coast and protect our
citizens for these reasons here.

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And this gets into some of the economic drivers. Certainly energy production and the dollar figures associated with that are immense. And, again, being in the transportation. And some of the intrinsic value of just our natural ecosystem are estimated to be into the trillions of dollars. So that is not certainly something to sneeze at. An so in recognition of all of this, again, CPRA was formed. We have been doing an awful lot of work over the last decade or so. About \$20 billion has been secured for doing the kind of work I am going to talk about tonight in coastal Louisiana. Many of those dollars are on the ground in terms of restoration and protection projects. hundred twenty million cubic yards of dredge material has been moved to do things like rebuild our marshes, our barrier islands, rebuild bridges, and so forth. We have been able to benefit over 36,000 acres of coastal wetlands in that time frame. We have

constructed 282, or improved 282 miles of

levees during that time frame, and were able to do work on about sixty miles of our barrier islands and barrier shorelines on the same time period. So, this is just a representation of sort of what that looks like across the state.

Obviously we have done a lot of work in this area in terms of risk reduction and also restoration of - much more work is going on along the coast. And much is going on as we speak. So on the North Shore the Bayou (inaudible) project is turning dirt right now. Moving around to the west recently completed a project that is being worked on the western part of the state. These projects are going on as we speak, so we are turning dirt right now and certainly there is more in the pipe line that will be upcoming. We are going to hear more about that as part of the Annual Plan presentation that will follow this one.

So, what's the coastal Master Plan, what is it at its most basic? It is really a method for us to make difficult decisions. We know we can't do everything that we want to do for all of our citizens. It is just a reality of this business. We can't restore our coast to a

level of, historical level, you know, 1930's, for example, or even the 1990's for that matter. We can't provide all the protection that we would like, or risk reduction we would like, for all of our citizens. But we can do a lot of good with what we have over the next fifty years or so. And so the Master Plan provides a framework for us to make those very tough decisions. And at the end of the day that methodology results in a list of projects and at its most basic the Master Plan does, of course, result in that list of projects for us to hopefully to that most good for the most

people.

Why do another plan? First of all it's required by law. We are required to update it every five years, and I think for good reason. You all are keenly aware, I think, of the dynamic nature of our coast. It changes minute by minute, hour by hour, certainly week by week, and year by year. And so updating to the plan allows us to react to the changing landscape and allows us to be able to modify the plan to adjust to those changes that we see. We also learn things as we go. As we

1 implement projects we get better at them, we

2 learn from implementing those projects. And

3 that mileage and that, you know, those

4 innovations will be incorporated into the

5 Master Plan updates. So we are doing this kind

6 of thing right now. And technology, again, and

7 science, and engineering, and so forth

8 certainly improves as time marches on and

allows up to develop a plan that helps us to

10 integrate those system restorations and risk

11 reduction aspect of things.

9

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So, what are some of the things that are different? I mentioned some of the lessons learned, including advancements in technology and the things that we know about. So we have improved our science and our technical analysis for the 2017 plan. Really, the ink wasn't dry on the 2012 plan when we began to think to ourselves, "Well, what are those things that we need to do differently? What would we have done if we actually had the time, or the data, or the ability to do some things differently to try to do a better job by putting this plan together?"

So those things were, many of those things

were incorporated into the 2017 analysis. 1 have incorporated new ideas and information 2 into this plan, so we put calls out for two new 3 projects. We certainly don't believe that we 4 5 don't have all the answers. And so there are public calls made for new ideas, new projects 6 7 to be evaluated as part of the 2017 Master 8 Plan. Excuse me. And, you know, many of those 9 projects were part of the overall evaluation 10 process in developing this plan. There is a new increased focus on flood risk reduction and 11 resilience. And I think you'll see that 12 13 reflected in the development of the nonstructural program as part of the 2017 draft 14 15 plan.

There is an increased emphasis on our communities. Certainly we recognize, the reason we are doing all this in the first place is for our people, for our communities. We all need a place to live, and a place to be able to recreate, and a place to make a living. And that is a significant driving force behind trying to accomplish what we hope to accomplish in the draft Master Plan. I think you will see that reflected in our people in the landscape

16

17

18

19

20

21

22

23

24

document that was available. Hopefully you got

- 2 a chance to pick one of those up today,
- 3 tonight, and take a look at that. But it
- 4 discusses issues like how does land loss affect
- 5 our ability to insure ourselves, how does it
- 6 affect the people that live along the coast,
- 7 and our ability to have viable communities and
- 8 so forth.

We've expanded our outreach and engagement for this, this go around. And we have been able to, with a little bit of clarity on our funding situation associated with the Deepwater Horizon oil spill settlement, we have been able to get a sense of, or a recognition of the urgency of the need to put projects on the ground now rather than later. Being able to put some of the funding that we otherwise would have had to support some of those projects earlier in the process. Again, projects on the ground sooner rather than later.

So the objectives of the Master Plan, you see those listed here. Again, we want to protect our citizens from flooding associated with hurricanes and storm surges. We want to harness the natural resources that are built in

south Louisiana in the first place. 1 certainly makes sense to tap into those things 2 that builds the land that we are standing on 3 right now to begin with. We want to provide 4 5 coastal habitats to support commercial and recreational activities, they are important to 6 7 all of us. Certainly our coastal heritage is 8 something that is extremely important to us, 9 that's why so many of us live in this region. It is something that we hold near and dear and 10 something that we want to be able to preserve 11 in the future. And that culture and heritage 12 is something that is intricately intertwined 13 with our coastal, coastal landscape. 14 15 want to be able to provide a working coast. 16 Again, all this is about, you know, our communities and the people that live on the 17 18 coast and we want to be able to provide a landscape and a place where we can work and 19 make a living. 20 21

So in terms of developing a coastal Master Plan, this is sort of the, the schematic that identifies that. We start off with a number of projects. I mentioned the call for new projects earlier that we evaluate through a

22

23

24

series of analytical tools, predictive models. 1 We are then able to organize and help fund or 2 understand the outcome of those predictive 3 models through a planning tool that indicates 4 5 or helps us understand how to put projects together. So in many cases projects, you know, 6 7 one plus one is actually greater that two when 8 you're talking about projects. Perhaps the 9 diversions or marsh creation project, the two 10 can work beneficially. For many instances projects work, you know, against each other 11 12 essentially, and so the planning tool helps us 13 identify where there is synergy and where there is potential conflicts, and how we might put 14 15 projects together in terms of alternatives that 16 need to be evaluated through those predicative models and ultimately be viewed again in the 17 18 planning tool to develop a draft plan as you will see today. 19

So let's start with the coastal projects.

There were 135 restoration projects that were evaluated as part of this, part of this process. Fifty-four non-structural protection projects. And when I say non-structural we are talking about voluntary flood-proofing of

20

21

22

23

24

1 commercial structures, home elevations, and acquisitions. Again, voluntary acquisitions 2 3 where those may be deemed necessary. And then twenty structural restoration projects. And by 4 that, those are the things that we are 5 certainly most familiar with; flood gates, 6 7 levees, things of that nature is what we are 8 talking about there.

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Just to give you an idea of how they are associated. So that represents 209 projects that were evaluated to be incorporated, to potentially be included in this part of the Master Plan. So the dollar figure associated with those 209 projects is roughly \$150 billion dollars. So as I, you know, I mentioned earlier, really what we are talking about in a nice way is a way to make some tough decisions. Well, it's, it's pretty tough to try to pare down \$150 billion worth of projects within a \$50 million constraint which is what we are working with here. And I will get into a little more detail on that in just a moment. The demand for this kind of work greatly outpaces our ability to supply the work.

So we are getting into the predictive

models a bit. And the real thing to, to take 1 home from this is if you look at kind of the 2 top, right-hand side of this as we are talking 3 about these models. This is where we are able 4 5 to evaluate how projects affect things in our environment. How does it affect the way water 6 7 moves? How does it affect the salinity of the 8 water? How might a project affect vegetation 9 or the way sediment is either deposited or 10 removed from an area? What happens to our barrier islands if we build a project? 11 12 those kind of things. But we also look at 13 things like surge waves, storm surges and waves, and how projects affect those and how 14 15 those storm surges and waves, of course, are translated to risk. And we do that over a 16 range of environmental scenarios. And you can 17 18 see the factors associated with those over on the right-hand side of that slide. 19

So let me begin to talk about the planning tool here. There are really two factors that are, or two drivers that affect whether or not a project is selected or not selected as part as the master plan analysis. And that's, it's those that you see here. How well does a

20

21

22

23

24

project reduce the flood risk to our 1 communities and how well does the project build 2 or maintain the land? So those are our primary 3 decision drivers and you see those again here 4 on this slide. But I mentioned constraints 5 earlier in a \$50 billion plan. We know we 6 7 don't have all the money in the world to do, 8 again, all the projects that we would like. 9 don't have that \$150 billion, and so we are 10 constrained by those dollars. And so funding you see is listed there as a constraint. 11 also have some natural resource constraints as 12 well in terms of sediment, fresh water, 13 nutrients, and so forth that are available to 14 15 do all the things that, that we would like to 16 do.

We also have these, these other things, these metrics, or things that we measure are listed on the right-hand side of this, of this slide here. And these are, again, things that we know are important to us. It is not just as simple has how much land we are building or maintaining or how much risk we reduce, there are also other things that are very important to us. So we you use these metrics, both

17

18

19

20

21

22

23

24

1 community and environmental metrics, to inform how projects - how they may affect things like 2 traditional fishing communities for example, or 3 how that might affect alligators, or oysters, 4 5 or water fowl for example. And so these are some other ways with which we can look at the, 6 7 look at the plan and the projects that are part 8 of the plan.

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So that is kind of the technical, science part of this thing. But we also know that we've got to be responsive to the needs of our communities. And we think we are doing that, and hopefully we will continue to do that. mentioned outreach earlier and really I think that this has been an unprecedented amount of outreach in the, in the recent past. This, and I'm not going to go through each of these, but this represents 150 opportunities for folks to either talk to us about the Master Plan process, and for us to, to hear from folks just like you about how this plan has been developed. And this dates back, you know, three years or so now. And it gets the gamut from everything from very, very technical specific models, you know, presentations and

discussions to, to more broad meetings very similar to this.

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Something I want to point out and something I think we are very proud of, and we worked with some of our partners to do this go around, are some of these community conversations that we've had. So it wasn't mentioned really earlier, but I have to, I have to say, we recognize this isn't the best format to, to interact with the public. And so we held these community conversations. And these were opportunities for us to have dinner, sit around a dinner table and speak with our stakeholders, speak with the people that are interested in the things that we are doing, and speak with - and have them speak with each other about these issues that are so important to us. And so it's been a really good model, I think we have gotten some really good feedback and really good interaction associated with those. And I think that is something that we will continue to do - and continue to do in the past.

I have said that perhaps this is not the best venue for, for that interaction. I will

say that we also think that it is very important to give the public an opportunity to go on the record and give us official public comments, which is also why we are also having a venue such as this.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So some of the key decision points associated with developing the plan. I mentioned earlier our overall funding amount is that \$50 billion dollars. That's not, as I said, an aspirational amount. That is not what we hope to, hope to, you know, achieve. is a constraint. So that is a constraint that we put on ourselves in terms of the number and types of projects that we can select. And the reason we picked the \$50 billion, or that was selected, was because, you know, we think that is a plausible amount of money that might come into the state over the next fifty years. it wasn't just pulled out of the air, it was something that we looked at and, you know, estimated in terms of potential money into the future.

Another piece of that funding equation is the split. So how much of that \$50 billion did we assign to the restoration projects versus

1 risk reduction - restoration and risk reduction projects? It is roughly a 50/50 2 split. Again, that is not an arbitrary number, 3 that is not an arbitrary split. There was some 4 5 analysis that went into selecting that number and it turns out, you know, that is essentially 6 7 the sweet spot for selecting the most best 8 projects in the restoration category and the 9 risk reduction category as well.

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

In terms of paying, we mentioned the future environments and here it is. We can't be sure what our future holds, we know that. We know, you know, predicting the weather is kind of a good analogy here. We know that we don't know exactly what the weather is going to be tomorrow but we are more sure what it is going to be tomorrow than it is fifty years out, or ten days out. And so as we are developing a fifty year plan, predicting that future at year fifty becomes more and more challenging. But it's what we have to do to develop the plan. And so, again, in developing this plan what we've done is predicted what we think might be the worse case in terms of land loss scenarios into the future, but certainly

we are hoping for the best. And that's a conservative approach, we recognize that. But the, you know, the fact of the matter is that we are planning for that, sort of, worst. If we achieve something that is less than that we are sure to be in much better shape than if we do, if we do the opposite.

And then there is, you know, a need for those near-term benefits and long-term benefits. So we need restoration now, we need protection now. And we know we need those things on the ground now. But we also want to make sure that we are making wise investments that will pay off for our children and grandchildren down the road. And so there is people emphasis in this plan placed on near-term benefits and long-term benefits.

So this is the plan, this is the draft plan. This is a map of what the projects and plan look like. You can see how they are distributed across the coast. There are roughly, there roughly are 120 projects going on now in the plan. They provide about 802 square miles of land that would not be there otherwise without the plan at fifty years. And

they reduce flood damages by about \$150 billion over that fifty year period.

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And so taking a closer look out west you can see what the projects look like. A lot of marsh creation projects, ridge restoration projects, shoreline protection projects, hydrologic restoration projects, and structural and non-structural restoration projects. And we'll get into that in a little bit more detail. Moving further the west, of course, we are getting into where some of the rivers are. The Atchafalaya primarily here in the central part of the coast, and so we are getting into using those as tools to help restore our coastal sediment diversions. see some of the barrier islands come into play as we move, again, further east into that central part of the coast. And then moving further east in the southeastern part of the state, again, making the same types of projects. Of course we've got the Mississippi River right outside our door here. It is a valuable tool that we believe, you know, we need to use to help restore and preserve our, preserve our coast. Many similar projects than we show on the western map as well.

so a closer look at the non-structural projects. Each of these colored polygons represents a non-structural project or an area. We sort of use that term interchangeably. You can see the number of structures that are estimated to be potentially mitigated as part of the non-structural program. Again, what I am talking about there is voluntary home elevations, voluntary flood proofing of non-residential properties, and potential acquisitions where that may be necessary.

- that is the estimate for what might be needed coast-wide and at a cost of about \$6.1 billion. I will say this, and I hope that I can be very clear about this, there is not a list of structures, and addresses, and so forth that we think, that we think need to be elevated at this point in time. What we have is a very high level estimate of the number of structures that may be out there that may need to be mitigated, but much more detailed work needs to be done before anything were to occur on the ground. And certainly, our first call

- if we were to get funding to do any sort of these mitigation type projects would be to local parishes and local municipalities. They certainly have much more experience in dealing with these and this type of projects, and have that local knowledge in determining what is really needed on the ground.

22

23

24

25

In terms of funding by project type you can see it broken down here. There is, again, this a 50/50 split, twenty-five and twenty-five billion. Risk reduction projects you see about almost \$19 billion expended for structural protection, and \$6.1 for non-structural. I am not going through the individual dollar figures on the restoration side of the house. You see barrier island, hydrologic restoration, marsh restoration, ridge restoration, sediment diversion, shoreline protection. Now, I would want to point out again, if you add up the dollar figure associated with the projects that would require dredging, or actually dredging, you know, sediment and placing that sediment to do restoration projects across our coast, this, is, again, the single largest expenditure in the Master Plan, the draft for this, this go

around.

25

So I want to go through some of the, the outcomes, the maps that show the outcomes of the plan. Our draft plan - this is something that we weren't able to do in 2012, and hopefully it will be informative and good. I will say that if you look at the top right-hand corner of these slides there is a little icon there with the cover of the plan. If there is a red X, that means that I am showing you a map without the plan in place. If there is a green check there I am showing you a map of the, of that outcome with the plan in place. So this is sort of the median scenario at year thirty. This is future without action, so with no plan in place. And you can see, of course, the red is land loss. The green on these maps, again, will be land gain. So this is what it might look like at year thirty on our coast without any additional action over and above what we are doing right now. And then year thirty with the plan you can see some of these green polygons coming on line. They represent the work that, that we are planing as part of the draft of this plan. We will look at it again

at year fifty. This is a future without action or without the plan in place, and then year fifty with the plan in place. So you can see again some of the land gain and some of the land sustained over the fifty year period covered in there.

So what does this mean in terms of absolute numbers. Well, what it means is at the end of the fifty years that'll have we about 802 square miles of land that we didn't have otherwise. So that is a net land gain over that fifty-year period, or at the end of that fifty years.

so this all translates to flood depths, right. We know as our coastal landscape deteriorates and changes it has an impact on the depth of flooding along our coast and for our communities. And so I will go through another series of maps of a future without action and a future with action. Take note of that icon at the top right-hand. So this is a twenty-five year - excuse me, the medium scenario for year twenty-five with a 100-year event. You can see what the flood depths are - let me back up actually and say that these

range, these colors range from that blue which is about one to three feet, if you are not able to read that from the back of the room. The greens are roughly four to six feet, yellow is seven to nine feet, that orange color is about ten to twelve feet, red color is thirteen to fifteen feet, and the purple color is over fifteen feet of potential flooding. So year twenty-five with the plan, and you can see what those flood depths look like across our coast.

1

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And I will show you a difference map. this is the difference between that first map and second map that I just showed you, and it shows the reduced flood depths in areas that are in these blues and greens. So blues and greens, again, are reductions in flooding from about nine feet up to, you know, minus three or minus four in terms of reduced flood depths. And so we'll look at year fifty. Again, this is without the plan in place for year fifty for that 100-year event. This is with the plan in place and then I will show you that difference map again. So, again, the blues and greens are essentially good colors. Those are the reduced flood depths across our coast as a result of

having the plan in place.

You know, I point out that there are a number of projects - and I should have pointed this out properly earlier - that are either on the ground already or are under construction right now. Many of those are in this region frankly. There is quite a lot of work going on in this region. So some of that is not reflected in what you are seeing here. This is a prospective look at new projects out in the future, so I just want to highlight that as we look at these things.

And so again, so in terms of absolute numbers, what does that mean? Well, it's about \$8.3 billion in reduced expected annual damages out at year fifty. It is really important to note that this is an annual number. So it's that 8.3 billion at year fifty. If you do sort of a cumulative tally of what those reductions might be over the fifty year period of analysis you are looking at roughly \$150 billion in savings. So we are just, you know, just on the risk reduction side of things at about a 3:1 return on investment for a \$50 billion plan.

So what does the plan deliver? What does

all of this mean? Well, you know, a number of 1 things I think. First of all it gives us some 2 3 time to adapt and prepare for that future that we have shown here. We know we can do a lot of 4 5 good for a lot of people for a long time, quite frankly. And again, I mentioned some of the 6 7 things, we can build and sustain land to the 8 tune of 800 to almost 1,200 square miles. Moving into the future, we know we can reduce 9 10 risk to the, you know, again, to the tune of roughly \$8.3 billion looking out to the future. 11 We provide a diversify of good projects that 12 13 can be put on the ground; seventy-six restoration projects, or twelve structural 14 15 projects identified as part of the plan, and thirty-two structural projects identified as 16 17 part of the plan.

We have ecosystem benefits, and that is something that I didn't really touch on just now. But in terms of what happens to our fish and wildlife and so forth, generally speaking, we are better with the plan in place than we are, you know, without that plan. And I think if you look at the deteriorating ecosystem in the future without any action you can

18

19

20

21

22

23

24

25

understand why that may be the case.

18

19

20

21

22

23

24

25

We are providing, you know, economic development opportunities for you all, for us, for our citizens. I think for a couple of reasons. One, a more sustainable coastal Louisiana always encourages investment, encourages development, and encourages us to be here and to develop those business and economy that need to be developed.

But also, you know, we're, Louisiana is really at the tip of the spear when dealing with these kinds of issues. Adaptation planing, dealing with sea level rise issues, subsidence issues, and so forth. So other parts of the country and other parts of the world are going to be dealing with these things, and in the very near future, if these predictions hold true. And we are already head and shoulders above most other places in terms of dealing with these kinds of issues. this really is an exportable commodity and something that we think that is a real benefit for Louisiana because we can assist these other parts of the country and the world in dealing with very similar issues that we are dealing

1 with right now.

22

23

24

25

So how do you get more information on all 2 this? Well, I hope you got your fill of 3 information before you came in here this 4 5 afternoon. And certainly there is a lot of other venues for getting good information 6 7 related to the Master Plan. Our website, 8 obviously, is key, is key there. It's Coastal. 9 LA.gov. You can download the plan there, you can look at our brochures, I mentioned the 10 people in the landscape. And then you can 11 12 also, if you have trouble sleeping at night, 13 dig into any one of our appendices as you might want to. There are roughly over 6,000 pages of 14 15 documentation associated with this. I am not 16 asking you to read all of those, don't worry. But if you are interested in how we modeled the 17 18 affect of a project on the juvenile white shrimp, the information is there. And you can, 19 20 and you can go look, okay? And there is a tremendous amount of 21

And there is a tremendous amount of information that is available now, it has actually been available in many cases for over a year. So if you haven't had a chance to look at things now, or until now, I certainly

encourage you to go to our website and take a look at those things.

We have something new this year for this iteration of the Master Plan, parish fact sheets. If you are interested in what is going on in Orleans Parish, or St. Bernard Parish, Plaquemines Parish, there is a fact sheet specific to your parish. You can look at some vital stats associated with what's happening there, see what predictions hold for the future for that parish, and look at the projects that are proposed in the Master Plan and what impact those projects have in terms of land area. Also risk reduction for your parish.

We have a project fact sheet. So if you are interested in an individual project you can go to the website, again, and download the information specific to that individual project. And, again, get some of those live stats and information associated with that individual project. We have our Master Plan data viewer that's available. Hopefully some of you are aware of the flood risk and resiliency viewer. This is an outgrowth of that or an expansion, really, of that to

1 include not just the flood depth information

- 2 but to also include other Master Plan
- 3 information on how projects may affect flood
- 4 depths in an area or the landscape in an area.
- 5 You can go in and actually type in your address
- 6 and look at your flood risk now, and what your
- 7 flood risk might be in the future, and what it
- 8 might be in the future with and without
- 9 projects in place. So that can be accessed,
- 10 again, at our website. And you can see the
- 11 data viewer specific address there at the
- 12 bottom of this, but it is, again, accessible
- 13 from CPRA's website.
- And then, in terms of our process, where
- 15 we are headed. So the draft plan was released
- 16 just the week before last, January third. Here
- we are January eighteenth. Of course, we had a
- 18 meeting last night in Lake Charles, we'll have
- 19 two more next week. These are our official
- 20 public hearings that we are having. The
- 21 official public comment period does not close
- 22 until March twenty-sixth, so that's an
- 23 important date to note. If you want to make
- 24 comments you have until March twenty-sixth to
- 25 do so. At April nineteenth, the April

- 1 nineteenth meeting of the board of CPRA we will
- 2 be presenting a final plan that will
- 3 incorporate much of your, your comments. Much
- 4 of the comments that we will hear, you know,
- 5 that we will hear and have heard across the
- 6 state. Ultimately to submit a final plan to
- 7 the legislature on April twenty-fifth of this
- 8 year.
- 9 So, just hopefully you saw this and of
- 10 course you are here today but in terms of where
- 11 we will be next week. Houma on the twenty-
- 12 fourth, Mandeville on the twenty-fifth. You
- 13 can see the agenda is the same, the same
- 14 information that we have here tonight. So, I
- 15 know that is a lot of information, and I
- 16 appreciate you sticking with me. And I
- 17 certainly look forward to hearing your comments
- 18 and your feedback on the plan. Thanks.
- 19 MR. SPEYRER:
- Thank you, Bren. I would like to ask our
- 21 officials from CPRA to come and join me here in
- 22 the front of the table. A couple of folks I
- 23 would like to recognize that have showed up
- 24 here since we got started. We've got a few of
- 25 our state representatives, Representative Polly

Thomas showed up, where is she? Okay. There
you are, thank you for coming. And we have
Representative Robert Guilliot, he is here as
well. Representative? We have Mayor Kerner
from the town of Lafitte joined us as well.

Okay. So now it is our turn to sit back and certainly hear your official public comments as it relates to the draft 2017 coastal Master Plan. We have a stack of comment forms that have already been submitted and I will start working through that list. If you were late joining us and would like to provide a public comment raise your hand, we'll pass out forms. You are able to do that, really, at any part during the presentation. We'll get it to you, we'll get you called up before we wrap up this portion of the presentation.

Sort of how we are going to handle this, we've got two wireless mics. I'm going to call the first person. Doug Daigle, get ready, you're first on the docket. And then number two will be Captain George Ricks. So I will sort of let you know who is first and who is going to be second. I ask you that when you

start providing your public comments, please
state your name and if you represent an
organization, please do that as well. All
these public comments that you provide tonight
are being recorded by a court reporter and will
be housed forever in an Appendix for the 2017
Master Plan, so use your words wisely.

In addition, really just out of respect for you and all of your time, we are going to put a three minute limit on this. We are not going to pull the mic from you at three minutes, but we ask that you please be respectful. As part of that Zach Rosen is sitting here in the front, to your right, will provide you a two minute warning, a one minute warning, and we will let you know when your time is up. And we ask that you please be respectful of the process so that we can work through this stack. And, again, I appreciate your patience. So that's, that's how this portion will work.

Lastly, in addition to the Port for allowing their facilities which we jam-packed here tonight, we would also like to recognize the Mississippi River Delta Coalition for

- 1 providing refreshments and drinks. So with
- 2 that, Doug, we are going to get you a
- 3 microphone and if Ann, Chuck, if y'all could
- 4 please help me out here. All right. You stand
- 5 up and we will bring you the mic. And then
- 6 Captain George Ricks, put your hand up and we
- 7 will get you the mic, you are number two. And
- 8 after this you'll be able to sort of stay in
- 9 your seats as well and we can get the mics to
- 10 them.
- 11 MR. DAIGLE:
- Hi. I am Doug Daigle, coordinator for the
- 13 Louisiana Hypoxia Working Group and the Lower
- 14 Mississippi River Sub Basin Committee, which is
- 15 part of the National Gulf Hypoxia Task Force.
- 16 Just wanted to make a couple of points. In
- 17 terms of the Gulf hypoxia issue, what's
- 18 commonly known as the dead zone, has a
- 19 reference in the plan. Louisiana has been part
- 20 of a national task force to deal with that
- 21 problem since 1998. It is moving on a separate
- 22 track, but it is obviously, you know, an issue
- 23 that has intersections.
- 24 The National Hypoxia Action Plan calls for
- 25 reducing the average annual size of that

hypoxic zone by about 5,000 square kilometers 1 by 2035. But before that the states on this 2 task force, one of which is Louisiana, have 3 agreed to work together to reach a cumulative 4 5 reduction of nutrient loading of the Gulf of twenty percent by the year 2025. Every state 6 7 adopted a nutrient strategy. Louisiana's 8 strategy focused on diversions. But I think it 9 is worth noting that in the plan the next diversion doesn't come online until some time 10 after 2022. You know, it is somewhat uncertain 11 12 but the construction is slated to begin, 2022, 13 something like that. So it's really on a different timeline and we need to help the 14 15 other states, however we can, reach that interim target of 2025. You know, that's the 16 commitment we've made. Those states are all 17 18 very interested in what happens down here. 19 They all recognize that we are working - using the river together, and the river is a shared 20 resource. And I think we have a lot of 21 22 potential support upstream. We have been 23 working with them cooperatively since 1998. 24 The other key players, of course, are the 25 federal agencies. And with a new

- administration coming in we need to make sure that we keep the lines of communication open on that issue with those folks as well.
- 4 MR. SPEYRER:
- Thank you, Doug. Captain George Ricks
 will be next. David Muth, you are on the
 docket. If you want to let us know where you
 are we will get the mic to you.
- 9 MR. RICKS:

10

24

25

I am Captain George Ricks speaking on behalf as president of the State of Louisiana Coalition, and upwards of a thousand members that I represent of land owners, business owners, and members of the commercial hydration and fishing communities. First, I would like to commend chairman Bradberry and CPRA staff for the work that they have done on the Master Plan. I would also like to commend, Mr. Bradberry, since you came on board you have been a welcome change. You have listened to our concerns with numerous outreach meeting, and it's obvious that you are listening because of changes in the 2017 plan. There have been some diversions eliminated, and we appreciate that fact. Ans some of the concerns we raised

y'all started to pay attention to.

Bren showed in his slides the importance of our commercial fishing industries. Twenty-six percent of commercial fishes come from Louisiana, sixty-four percent of the state's oysters comes from St. Bernard's waters. I am a consultant with St. Bernard Parish and we are very concerned about the issues because our commercial and recreational fishing industries are very important to our economy. Not just to St. Bernard's economy, but the whole state's economy. So this diversion issue, it is very important to us.

We talk about a sense of urgency in the Master Plan, and there is one more reason that I think we have to revisit the diversion issue. The concept. We are looking at five years permitting possibly for the Barataria Bay and then five years construction time, so we are looking at ten years down the line. We're looking at \$1.3 billion. You want to talk about wise investments. \$1.3 billion, and that doesn't include land acquisition costs, maintenance of construction over runs, or the mitigation. So only make wise decisions with

1 our investments.

Last year the coalition partnered with Corps engineers to build 2,000 acres. This is something that can be done. (Inaudible). And I think the diversion issue, though, it could be an important tool. I don't think it's the silver bullet, but we're putting all of our bets in line on diversions. And I think we need to turn them around now. Thank you.

10 MR. SPEYRER:

Thank you, Captain Ricks. David Muth will be next. On dock after David will be Mr.

Harvey Stern.

14 MR. MUTH:

My name is David Muth, I am with the
Federal Wildlife Federation working on the
Mississippi River Delta Restoration Campaign.
I am a Louisiana native, grew up in the New
Orleans area. I deeply appreciate the efforts
of CPRA and the State of Louisiana, the
leadership that they are showing on dealing
with our future risk and our existing risk.
And I also have to say that the idea that we
can restore our system without using the one

tool that built it in the first place, which is

- 1 the Mississippi River and the vast amount of
- 2 sediment that is now passing by here at the
- 3 dock in the City of New Orleans and being
- 4 wasted, much of it lost into the Gulf of
- 5 Mexico, is simply not the way to seed our
- 6 future.
- 7 We are proposing this plan to spend over
- 8 \$20 billion dredging and moving material from
- 9 the Mississippi River, from offshore shoals,
- 10 from the deep bays, and that's in the final
- 11 part of the plan. But in order to sustain
- 12 that, in order to get the system going again,
- 13 it has to pass the Mississippi River, the
- 14 Atchafalaya River, and the sediment that it
- 15 carries. And I appreciate the state's efforts
- 16 in moving those projects. Thank you.
- 17 MR. SPEYRER:
- 18 Thank you, David. Mr. Harvey Stern, there
- 19 you are. Okay. And up next will be Charles
- 20 Mestzyer.
- 21 MR. STERN:
- 22 All right. Harvey Stern with the Delta
- 23 Chapter of Louisiana Sierra Club, and I
- 24 appreciate the opportunity to speak tonight.
- 25 Three minutes is going to be tough. I'd like

to first focus specifically on a project that 1 was mentioned in the, in the Times Picayune 2 recently that is talking about the high 3 profile, one of the most high profile projects 4 5 in the Pontchartrain basin, and that is the proposed gates across the Rigolets. And for 6 7 any of the gray hairs in the audience, you know 8 this project goes back to the seventies, which it was aborted for many reasons. Among the 9 10 most important is that it was felt by the judge hearing the litigation - was the case that was 11 being looked at. Well, here it is again 2017, 12 13 and it is in the plan and we simply suggest that a project of this magnitude, which is 14 15 going to very likely cause induced development, 16 which is a key phrase that is used in the Appendix H. Appendix - I believe it is in 17 18 Appendix H of the comprehensive plan of the state coastal plan. That this project be given 19 a full comprehensive environmental statement, 20 environmental assessment before it is formally 21 put into the plan. There is just too much on 22 the line with this project to include it in the 23 24 plan prior to a full-scale environmental impact 25 statement being included.

Again, induced development is a great 1 example of what is likely to occur if this 2 project goes forward. Just the fact that it is 3 included in the plan, that induced development, 4 5 which just has (inaudible). The fact that it is encouraged development in the vulnerable 6 7 areas of St. Tammany Parish, which are 8 questionable for development to begin with. We 9 don't need - just the very mention of this 10 gate across the Rigolets in the plan until there is a full-scale environmental impact 11 12 statement. Prohibit development in wetlands is 13 in the appendix of this plan. I hope that the appendices are given as much value and as much 14 15 validity as the plan itself, the appendices 16 should be part of the plan. I am talking about 17 the appendix that talks specifically about 18 wetlands land use planning and has mitigation planning. 19

We know that mother nature causes a lot of our problems, but we know that in coastal Louisiana that man-made development is aggravating that problem. I was on the coastal management website and on the Corps website today. There are major projects causing

20

21

22

23

24

25

- 1 serious jurisdictional wetland destruction.
- 2 There is a pipe a transmission line going
- 3 across Terrebonne and Lafourche Parish that
- 4 would, that would destroy several hundred acres
- of wetlands that is currently on the books. We
- 6 have got to look at the impact these wetlands
- 7 we have to bring our land use plans into a
- 8 place where they are going to be implemented
- 9 and that the coastal Master Plan reflects that,
- 10 what you are saying in the plan. Prohibit
- 11 wetland developments. Mitigation should be a
- 12 secondary approach, not developing new
- wetlands.
- 14 MR. SPEYRER:
- Thank you, Mr. Stern. UP Next, Mr.
- 16 Charles Mestzyer. Charles, please stand up and
- 17 raise your hand for us. And then Benny
- 18 Roussell will be next. Mr. Roussell, will you
- 19 raise your hand for us? Okay. There we are.
- 20 MR. MESTZYER:
- 21 Happy New Year 2017. I retired in 2009
- 22 from the Corps of Engineers after thirty-five
- 23 years. This wetland plan, structural plan, I
- 24 don't know when it will ever be built and if it
- 25 will be built soon enough. There is no way

- 1 they can possibly do it. All I have to say is
- 2 that we are part of the problem. We are the
- 3 cause of most of this destruction of our
- 4 wetlands. What we need to do is look back at
- 5 what we caused and what we can do to change it.
- 6 And what we can do to change it is try to not
- 7 destroy it. These I would say stewardship.
- 8 In our time, I guess, we have lost track of
- 9 other things in life. So I think we are
- 10 messing up and I don't think there is a
- 11 possibility of pulling our way out quick
- 12 enough. Backing up from the surge of the
- 13 wetlands, or the lack of wetlands, to protect
- 14 us as we back up the state quick enough. Hold
- 15 back fresh water, moving the people back
- 16 inland. We cannot win this battle and barrier
- 17 reefs will not protect us. Thank you.
- 18 MR. SPEYRER:
- 19 Thank you, Charles. Benny Roussell is
- 20 next, followed by Mayor Tim Kerner.
- 21 MR. ROUSSELL:
- Thank you. Mr. Chairman and member of the
- 23 committee, my comments will be very brief. The
- 24 reflection of the plan that is being presented
- 25 today a former member of the CPRA, that

- 1 first plan we had in 2007 looked at Plaquemines
- 2 Parish and gave us 100 year protection in the
- 3 plan as a possibility. The next plan came out
- 4 and eliminated that. And as we look at it
- 5 today there are no levee projects in here to
- 6 protect us as well. So I guess my assessment
- 7 of the evolving CPRA Master Plan, which this
- 8 third iteration is, is that we are getting away
- 9 from protection. And while the focus is on
- 10 diversion, and Plaquemines Parish is now
- 11 benefitting greatly from a lot of the
- 12 restoration projects and has been used as a
- 13 poster child, we cannot forget the levees and
- 14 structural protection to help us survive. And
- 15 I hope that you will go back and review the
- 16 plan for those projects. Thank you.
- 17 MR. SPEYRER:
- 18 Thank you, Councilman Roussell. Mayor
- 19 Kerner, are you ready? Up next will be Scott
- 20 Eustis.
- 21 MR. KERNER:
- Let me just say that I want to thank
- 23 CPRA, Mr. Johnny Bradberry, and his staff for
- 24 what I think is a wonderful job and a lot of
- 25 hard work. And there was some confusion at

- 1 first and it almost gave me a heart attack. I
- 2 thought that we were out of the protection.
- 3 There have been a few times and now in
- 4 (inaudible) the levee protection plan. And I
- 5 just want to thank y'all from the bottom of my
- 6 heart for all the hard work you are doing, and
- 7 realizing that my residents have suffered
- 8 enough. Thank you so much.
- 9 MR. SPEYRER:
- 10 Thank you, Mayor Kerner. Scott, before we
- 11 get to you I, I do also would like to make sure
- 12 that everyone here knows, before anyone starts
- 13 leaving as well. Thanks to a generous grant
- 14 from the New Greater Orleans Foundation, today
- 15 we have available translated documents of the
- 16 executive summary of the Master Plan in both
- 17 Vietnamese and Spanish, French is going to soon
- 18 be available. You can contact any of us on the
- 19 team to get you multiple copies of this if you
- 20 would like to do outreach to, to non-English
- 21 speaking or non-native-English speaking
- 22 communities. Scott.
- 23 MR. EUSTIS:
- 24 Thank you. My name is Scott Eustis, New
- 25 Orleans, Louisiana, seven generations. I work

1 for the Gulf Restoration Network, a twenty-two year old environmental advocacy group across 2 all five Gulf states. And I want to thank you 3 for CPRA's leadership, we don't see this across 4 5 any other Gulf states, we don't see this kind of leadership. You are getting a lot of heat 6 7 because you are the head of the pack. always have people pushing on you but 8 9 thank you again for this tremendous planning effort. 10

But you wouldn't be surprised if I said it didn't need, need more. The state has been a leader in holding oil and gas to account for their damages, but it won't, it won't surprise you, though, that there is huge deficiencies in the permitting program. I don't know how many letters of no objection CPRA has to send everyday to projects like pipelines that destroy hundreds of acres of coastal forest and coastal wetlands that then CPRA, it is upon CPRA to rebuild. There are so many things CPRA could do to require of these companies before they displace our wetlands. There are requests for information that CPRA could make so that we have more science going in so we know how to

fix the damages on the other end.

carbon impact questions.

And one of the biggest things is that, you know, the Gulf of Mexico, which is hotter than ever, you got more rain than ever, and it floods us from the sky now. In 2016 hundreds of thousands of people were put out of their homes from unprecedented rains due to climate change. One of the ways CPRA could get more of a handle on this issue is by requesting a full carbon life-cycle analysis for any of these very large oil and gas impacts to our wetlands. Those impacts from putting a pipeline like Bayou Bridge through our wetlands has a carbon impact by pressing the soil that, if not handled through the Corps and the NORCM mitigation process, but ultimately these products are for export, which only makes the Gulf hotter. It is going to give us more rain, only rises the sea more. And that is really what, more than anything else, the rising sea is what determines how much land we have left in Louisiana by 2040 and at the end of this fifty-year plan. So we request that CPRA start asking for

So we got a lot of

other things we need; we need oyster reefs, we need dolphins in Barataria Bay, we need coastal communities, anchored communities. We need those communities are part of Louisiana, we need them as part of our heritage. Orleans and the state is diminished if those are left out of the plan. But we ask you to push on industry and push on other agencies who aren't asking for this information, who aren't taking care of the Gulf, because otherwise the costs are going to fall on your backs and that means it is going to fall on our backs. you.

14 MR. SPEYRER:

Thank you, Scott. Next up will be
Johanna, I think I saw Johanna sitting next to
Scott. Let me make a quick comment again. We
want to be respectful of everyone's time here
tonight. We appreciate you doing the same. In
addition to today's opportunity to provide your
official public comment, look up on the screen,
there is other ways to do it following tonight,
as well, if you want to provide a comment.
Comments we get through the website or through
mail are as every bit as important and have an

- 1 impact as the ones we receive tonight.
- 2 Johanna.

15

16

17

18

19

20

21

22

23

24

25

- 3 MS. DE GRAFFENREID:
- My name is Johanna de Graffenried, I 4 5 work with the Gulf Restoration Network. going to specifically talk about the non-6 7 structural aspect of the program. Over the 8 last couple of months CPRA has seen me several 9 times at meetings, or with phone calls, and I 10 again really appreciate the opportunity to continue to comment on this plan. And the 11 12 input that you all are receiving, I hope that 13 you take it seriously and that you move forward with our recommendations. 14

So what we want to really emphasize right now is that non-structural needs to prioritize communities most at risk. CPRA should flip the prioritization in the non-structural programs to focus on those who are most at risk and low income residents. Furthermore, it should prioritize incentives for community-level approaches to elevation, flood-proofing, and relocation. The state should leverage its financial resources for developing community-wide approaches, encouraging neighbors to take

action together to preserve the character and function of a coastal neighborhood as they take steps to improve collective resiliency. In particular, low income residents living in areas of fourteen feet below flood elevation or above, and those who make their livelihood in the Gulf are the most at risk for coastal land loss. They need to know their options as well as what the state is planning to do to help them beyond marking their communities as voluntary acquisition or as resettlement zones.

Our communities deserve to be valued for their resources and for what they provide in cultural heritage to the state. We should not be devalued simply because we live in a rural area or an area is depopulating. We need to make sure that the economic value of a residential community of assets over time should not be based on population growth.

Attachment C3-25, the storm surge and risk assessments of the 2017 draft coastal Master Plan assumes that a home is more valuable over time as the surrounding population is growing faster. This assumption about value is unsupported.

CPRA also specifically looks at population 1 2 change between 1950 and 2000. However, according to the U.S. geological survey, 3 scientific investigation about land area change 4 5 and coastal Louisiana form 1932 to 2010, low lying coastal areas have been facing the impact 6 of land loss since before 1950. The land loss 7 8 is why people are moving away. This assumption 9 about value over time based on population growth diminishes the prioritization and value 10 11 of Louisiana's low lying residential communities that have been historically 12 threatened by coastal erosion. We would ask 13 that the CPRA, in its flood risk and resilience 14 15 initiatives and in its non-structural program 16 prioritizes those most at risk and prioritizes low income community members in its analysis 17 18 versus the current cost benefit analysis approach. Thank you so much. 19 MR. SPEYRER: 20 Thank you. Eric Zollinger. John Lopez, 21 22 you're on deck. Raise your hand, John. 23 there, got you. Eric, please state your name.

My name is Eric Zollinger, I represent

24

25

MR. ZOLLINGER:

61

1 Biloxi Marsh Lands Corporation and Lakeview

- 2 Land Development, Inc. We are owners of over
- 3 150,000 acres on the Biloxi Marsh Complex
- 4 located in St. Bernard Parish, and part of the
- 5 local lines of defense for protecting the
- 6 Greater New Orleans Metropolitan area from
- 7 storm surges. As the largest land owner in St.
- 8 Bernard Parish, we currently do not support the
- 9 CPRA's 2017 Master Plan as currently drafted.
- 10 Specifically, we are very concerned that the
- 11 restoration projects that were included in the
- 12 2012 plan have been excluded from the 2017
- draft plan. More importantly, restoration
- 14 projects which are part of the US Army Corps of
- 15 Engineers MRGO Ecosystem Restoration Plan have
- 16 been excluded from the 2017 draft plan.
- 17 One restoration project of particular
- 18 importance that has been excluded from the 2017
- 19 plan is protection of the Lake Borgne shoreline
- 20 at the Port (inaudible) area. By not including
- 21 the MRGO Ecosystem Restoration Plan in the 2017
- 22 plan the multiple lines of defense against
- 23 storm surge will greatly hinder in the
- 24 protection of Orleans Parish as well as St.
- 25 Bernard. And Biloxi Marsh Land, we plan to

- 1 submit written comments with more specific
- 2 details that is supported by scientific data.
- 3 Thank you.
- 4 MR. SPEYRER:
- 5 Thank you, Eric. John Lopez. Simi Kang
- 6 | will be next. John will be next.
- 7 BY MR. LOPEZ:
- 8 John Lopez with the Lake Pontchartrain
- 9 Basin Foundation. Bren's presentation showed,
- 10 on the infamous red maps, show the fifty year
- 11 projection and I know that a lot of people in
- 12 the room are kind of veterans of the whole
- 13 discussion. But any of you who had just seen
- 14 that map. What we are seeing here in that
- 15 projection is different than we were seeing
- 16 before. This is the one the coast being
- 17 eaten away and we are seeing is potential
- 18 landscape scale change by the year 2050. This
- 19 is different, this is a different situation.
- 20 We are in a crisis. This is another order of
- 21 magnitude that we are seeing. LPBF has
- 22 advocated for all lines of defense to generate
- 23 restoration and flood protection. And the
- 24 state is doing that but this is getting to be a
- 25 greater challenge. You know, next year is the

- 1 300 year anniversary of New Orleans and, you
- 2 know, just a short distance from where we are
- 3 sitting right now. You know, right now it's
- 4 not clear if there will be a 400 year
- 5 anniversary of New Orleans. The flooding that
- 6 we saw in Ivan is even threatening the Greater
- 7 Baton Rouge area around Maurepas.
- 8 There are projects that we specifically
- 9 are interested in like the Pontchartrain
- 10 (inaudible) and we will be commenting on that.
- 11 Everyone has something that they would like to
- 12 see in or out. My request is this, not with
- 13 the state but with the audience, is that once
- 14 this plan is approved, and we all want it to be
- 15 approved, is we all have to get to agreeing.
- 16 Some of the ways that I talked about are not
- 17 caused by the state or feds, it's by us not
- 18 always agreeing. Disagreement is okay but we
- 19 have to start to put those differences behind
- 20 and get behind this plan, and build projects
- 21 even faster than what the state has been doing.
- 22 Thank you.
- 23 MR. SPEYRER:
- 24 Thank you, John. Simi, where are you?
- 25 MS. KANG:

Hi, y'all, my name is Simi Kang, I represent Coastal Communities Consulting, an organization based in Gretna that serves folks from Plaquemines, Terrebonne, St. Charles, Lafourche, St. Bernard, Jefferson, and Orleans Parishes. We work with over 1,000 fishing families and as the draft plan points to, they are the number one producer of oysters, shrimp, blue crab, and crawfish in the United States.

We have heard several concerns from our families and other coastal residents regarding the Master Plan. The draft plan highlights the coastal stakeholder and community needs in the planning process because the communities are connected to coastal ecology and are part of the solution. We would like to see a community engagement to elicit feedback from communities well before the draft stage. Community members are experts in their field and this expertise should be reflected in the Master Plan.

Fishing and other coastal communities are concerned that some projects could have a negative impact on them and their industries.

At the CPRA board meeting on October 21, 2015, it was announced that CPRA was moving forward

with the Mid-Barataria and Mid-(inaudible) sediment diversion project. During this presentation one slide showed that brown shrimp population would decline fifteen percent in the ten years following the beginnings of these programs. It has been over a year since this meeting and it is still not clear how CPRA will address the loss of brown shrimp in the commercial fishing industry. I did a quick search in the appendix for brown shrimp and the

terms of (inaudible).

We understand the value of diversions, however, and the potential benefits they will have to the coast. We also know that the commercial fishing industry is the third largest in the state after oil and gas, and transportation. While the draft focuses on the concerns of the other two industries, commercial fishermen's concerns are not addressed, clearly. It is important that CPRA clearly identifies the impact of diversions and other projects could have on coastal communities. Communities want to know what these impacts are, how they will be measured and accounted for, and most importantly want to

- 1 know how the state will mitigate the impact
- 2 with their industries. Thank you all so much.
- 3 MR. SPEYRER:
- Thank you, Simi. Amanda Moore, you're
- 5 next followed by Steve Cochran. Amanda, Steve,
- 6 where are you?
- 7 MS. MOORE:
- 8 Hi. Amanda Moore with National Wildlife
- 9 Federation and (inaudible) of behalf of
- 10 (inaudible) Coalition. We represent seventeen
- 11 environmental organizations. And we want to
- 12 thank you for all the work that has gone into
- 13 the plan and for also the restoration and
- 14 protection projects in the draft 2017 coastal
- 15 Master Plan that address MRGO impact. We are
- 16 also concerned with some of the projects that
- 17 are not included, but we are also in the
- 18 process of reviewing the plan further and we
- 19 are going to submit comments before the end of
- 20 the comment period that are more detailed.
- But for now I want to say, you know, we've
- 22 been advocating for projects for a long time,
- 23 the New Orleans East land bridge, the Golden
- 24 Triangle, central wetlands, Bayou Ridge. These
- 25 | have long been priorities for our coalition and

we are pleased to see they are of importance and recognized in the plan. However, the omission of oyster reef and marsh restoration projects in Biloxi Marsh appear to leave a gap in the storm buffering for communities in St. Bernard, and New Orleans, and other communities in coastal Mississippi and around Lake Pontchartrain. And this would also diminish

the estuary habitats vital to (inaudible).

Additionally, we are looking into the sediment storage for the MRGO area marsh creation. In the draft plan, despite the omission in the 2017 plan of the Mississippi River sediment delivery pipeline piece.

Finally, we ask that an overview of the Army Corps of Engineers and State of Louisiana's work on the Mississippi River Gulf Outlet's feasability study be included in the plan.

Since the passage of the 2017 coastal Master Plan the assistant secretary of the Army recommended \$1.325 billion of projects to Congress for appropriations and a problematic (inaudible) of nearly \$3 billion projects is complete or either locked down for coastal

Louisiana restoration that should be

- 1 recognized.
- 2 MR. SPEYRER:
- 3 Thank you, Amanda. Steve Cochran.
- 4 Following that will be Greg Gasperecz.
- 5 MR. COCHRAN:

21

22

23

24

25

Thank you. And thank you very much for 6 7 being here, CPRA. I've been trying to tally 8 and see how you can right-side all the requests 9 you have, so good luck to you. I will have to say, I mean, I've been to a lot of public 10 meetings over my career. This may be as good 11 12 as I've ever seen in terms of the quality of 13 the comments, the thoughtfulness of the detail, the analysis that has already gone into it, so 14 15 I think that's, that's testament to the value 16 of the commitment that you guys have made to do 17 this. I think people are beginning to take you 18 seriously, that's critical. And I, I am not really kidding when I say best of luck in 19 20 trying to reconcile all that.

John Lopez's comments about how much we, how much more we face than we used to are really worth us all understanding, clearly.

The shorthand for saying that is the worst cast scenario that the state had to plan against in

- 1 the last Master Plan, I guess, really close to
- 2 the best case scenario in this particular plan.
- 3 And that's only the case of a five year
- 4 difference. So the line is moving quickly and
- 5 the ability to manage against that is something
- 6 that Louisiana has developed well. Really, it
- 7 rivals anything that goes on in the world. And
- 8 so I, I'm really proud to be a part of that and
- 9 to, to see you guys leading this effort.
- I do think that, in particular, my job
- 11 here is to represent five other organizations,
- 12 the Environmental Defense Fund, National
- 13 Wildlife Federation, The National Audubon
- 14 Society, the Coalition to Restore Coastal
- 15 Louisiana, and the Lake Pontchartrain Basin
- 16 Foundation. And among us we have a great deal
- 17 of craft and opportunity to understand the
- 18 details of this. One of the things that is
- 19 clear is the scientific basis for this. When
- 20 projects fall out, they fall out because the
- 21 science is taking us in that direction. And
- 22 that doesn't mean the science is always
- 23 perfect, it certainly is not. It means that
- 24 there is solid science basis, not just purely
- 25 | political basis. And that's critical, being

able to do this the right way to be able to
maintain the credibility in the decision-making
that you guys have to. So we love to see that.
That coupled with this public process is how we
will get the best plan. So it is very
encouraging moving in this direction.

The other thing that we've seen the science do is continuously lead us to the river. The river that flows by here is so, is such a critical element. Not only because it can help build land again as it once did, but also because it can sustain the land that we build through marsh creation or any other means. Without those things working together we can't be successful. But with them, based on the modeling that we can see looking forward, we've got a shot at this, we've got a chance. So that's great to see and that, that leads us in the right direction.

And the last comment - we will, of course, submit these comments in detail. But the last comment I will make is about the non-structural. CPRA has taken on something that hasn't occurred before which is the actual defining of the areas that are most at risk.

- 1 My guess is the first cut won't be accurate
- 2 entirely, but what it begins to do is inform
- 3 the communities of the risk that they in fact
- 4 face. Because, as John Lopez said, if we can't
- figure out how to do this together we're not
- 6 going to be able to get it done. And in order
- 7 to do that we have to have the information.
- 8 CPRA has really made a good step forward in the
- 9 non-structural, providing that information to
- 10 communities so we can attempt to do that.
- 11 Thank you very much.
- 12 MR. SPEYRER:
- State your name and organization for the
- 14 records, please.
- 15 MR. COCHRAN:
- 16 Steve Cochran, Environmental Defense Fund.
- 17 MR. SPEYRER:
- 18 Thank you, Steve. Greg. Following Greg
- 19 will be Khai Nguyen. Khai, where are you?
- 20 MR. GASPERECZ:
- 21 Thank you. Good evening. This is Greg
- 22 Gasperecz. I'm an environmental engineer here
- 23 in New Orleans. Born, and raised, and residing
- 24 in New Orleans. My comments are not about
- 25 specific projects but about the process. But

before I get to that I want to thank and
congratulate CPRA on really a fine job in
putting this plan together. It is wellwritten, well-organized, comprehensive, and I
think you've done yourselves and Louisiana a

great service. So thank you very much.

The process part of creating the plan that my comments address - and by the way, I have submitted this via e-mail already. Part of the - in estimating sea level rise, and I know that that, the sea level rise estimates really, as people have noted, have gone from sort of what's worst case in last is now best case. And yet, because of the time delay in establishing the baselines that you all use, and having to create the plans on top of that - as noted in Appendix C there's no information, no scientific information from 2014, 2015, or 2016 that informed the decisions and the baselines that you're assuming, the low, medium, and high.

Two critical papers have come out in that time. In November of 2015, Strauss and Kolp and the proceedings of the National Academy of Science indicate that current levels of CO2 in

the atmosphere will ultimately result in 4.2
feet of additional sea level rise. This will
- much of this will occur in this century,
probably about three feet of that in this
century, just from current levels.

Secondly, Decanto and Pallor, in March of 2016 in Nature, another peer review article, had a more troubling outlook regarding the stability of ice shelves in the Antarctic and the ability, and the long-term ability to sustain those. And ultimately they suggest three to six feet of additional sea level rise.

I understand that there's a need to set the time frame before you make a baseline and then build projects around it. My request is, is that you try to impress - or, or give yourselves more of the later information available. And my request to the audience is to look into this issue, start a dialogue with your state representatives. If your state representatives are here, ask them, having an honest dialogue about this issue. It is time to put the partisanship on this issue aside. And that we need to get to a, a consensus that if we are going to base our approach on

- 1 science, that we should in fact have an honest
- 2 discussion about what that means for us as a
- 3 community of all of us, including myself, who
- 4 work in the oil and gas industry and the
- 5 impacts that are associated there.
- I thank you very much for your, again, the
- 7 great job done. And I appreciate the
- 8 opportunity to make these comments.
- 9 MR. SPEYRER:
- 10 Thank you, Greg. I apologize for the
- 11 mispronouncing. My last name is Speyrer, S-P-
- 12 E-Y-R-E-R, and no one ever gets it right. So
- 13 I, I hope that he will take it the way that I
- 14 will. Following Khai will be Renate Heurich.
- 15 Okay.
- 16 MR. NGUYEN:
- 17 My name is Khai Nguyen. And we serve a
- 18 lot of community members that are involved in
- 19 the fishing industry.
- 20 MR. SPEYRER:
- 21 Can to talk louder and closer to the mic?
- 22 MR. NGUYEN:
- I will. Sorry. So we have a lot of
- 24 competitive (inaudible) in the fishing industry
- 25 and I have, pretty recently, asked them if they

- 1 were aware of the Master Plan. Some of them
- 2 said no, they weren't aware of it at all. So I
- 3 feel like it is important to kind of work with
- 4 community organizations to help sending the
- 5 information about the projects and how it
- 6 affects community members and also to provide
- 7 community organizations to provide services to
- 8 help people kind of like find out how they
- 9 qualify for non-structural, and how structural
- 10 projects will affect their community.
- 11 MR. SPEYRER:
- 12 Thank you. Next up will be Ms. Rosa
- 13 Herrin.
- 14 MS. HEURICH:
- Okay. I'm Renate Heurich. I with, I am a
- 16 volunteer with 350 Louisiana, which is a
- 17 climate justice organization. I want to speak
- 18 out against projects that outright destroy
- 19 wetlands. So, I mean, here we are spending a
- 20 large amount of money trying to restore
- 21 wetlands when, on the other side, we have
- 22 organizations that are destroying them all for
- 23 private gain.
- One good project well, there is a NASA
- 25 study recently that links ground water

extraction directly to plant science for miles 1 around. And here in the city the point that 2 was sinking the fastest was right there where 3 Entergy at the Michoud plant, the Michoud power 4 5 plant extracted ground water for cooling purposes to the, at the rate of 12 million 6 7 gallons per day for sixty years. So that 8 contributes to land loss according to NASA. 9 Those plants are shut down right now but 10 Entergy New Orleans wants to build another power plant in the same area. They - it's 11 12 more modern and they say it will extract far 13 less ground water, but they still want to extract ground water. And in their application 14 15 to the Army Corps of Engineers they didn't even 16 mention that they are going to extract ground 17 water again. So I am saying that the levee, 18 the levee board should require a new application from Entergy New Orleans for this 19 20 plant, including all the factors that play a 21 role in this. The other project is the Bayou Bridge 22 23 pipeline that, well, that is scheduled to run 24 from Lake Charles to St. James, across

Louisiana, right north of designated wetlands.

25

- 1 One hundred sixty-two miles long across the
- 2 Atchafalaya Basis, crossing 700 waterways,
- 3 destroying outright destroying seventy acres
- 4 of wetlands and impacting 500 more acres.
- 5 There is a recent report that last year we had
- 6 144 documented pipeline spills in Louisiana.
- 7 So pipelines do spill, and we saw in BP what
- 8 oil spills do to wetlands. What how we are
- 9 losing land when vegetation is destroyed by
- 10 oil. So that's another project that is really
- 11 too directly contradictory to our efforts here
- 12 to restore our wetlands.
- 13 My last point is Okay.
- 14 MR. SPEYRER:
- 15 Real fast.
- 16 MS. HEURICH:
- 17 I want to say I am grateful to Governor
- 18 Edwards trying to go after the oil companies to
- 19 help us pay to, to pay the pricing because they
- 20 all also have a large responsibility in the
- 21 destruction of our wetlands.
- 22 MR. SPEYRER:
- Thank you. We've got Rosa back here. And
- 24 then following Rosa will be Jeff Bordelon.
- 25 Jeff, where are you?

MS. HERRIN:

22

23

24

25

My name is Rosa Herrin. I represent Hi. the (inaudible). We are concerned about the non-structural section of the plan. We see that in the 2017 draft plan the state (inaudible) \$8.6 billion, or 17.2 percent of the building budget. This is a 3.2 percent decrease from the 2012 Master Plan. So we would like to ask for CPRA to maintain the 20 percent threshold, and that for every eighty cents allocated or spent on the structural projects, twenty cents must be allocated or spent on a non-structural project.

We have also heard the CPRA say that they are planning to use funding from the Gulf Of Mexico Energy and Security Act on nonstructural projects. To be sure this happens we would like for CPRA to pass a resolution maintaining a portion of annual offshore energy revenue coming to Louisiana under GOMESA for funding of non-structural protection that benefits our community. Thank you.

MR. SPEYRER:

Thank you, Rosa. Before we get to Jeff, real fast. People standing up and even sitting

- 1 in the aisles, there's plenty of seats that
- 2 have now opened up here in front. Let's take a
- 3 second if you would like to come grab a seat,
- 4 feel free to come do so. Jeff, you'll be here
- 5 in a second. And then Reverend Tyrone, you'll,
- 6 you'll follow Jeff. Okay. Y'all feel free to
- 7 come on in and fill those seats, please.
- 8 MR. BORDELON:
- 9 Good evening. My name is Jeff Bordelon.
- 10 I am here on behalf of EMR Southern Recycling.
- 11 One of our core competencies is the recycling
- 12 of obsolete ships, and boats, and such. The
- 13 2017 Master Plan in its current draft will
- 14 negatively impact Southern Recycling,
- 15 particularly our facility in Amelia. We won't,
- 16 excuse me, the sediment issues that will arise
- 17 as the direction channel is implemented will be
- 18 an adverse effect to us and we would like the
- 19 opportunity and appreciate the opportunity to
- 20 speak with your leadership about that
- 21 specifically. Thank you.
- 22 MR. SPEYRER:
- Thank you, Jeff. Reverend Tyrone Edwards.
- 24 And then following that will be Shawn Anglim.
- 25 REVEREND EDWARDS:

I won't talk that long. I'm just amazed at the Master Plan and I get more confused because what I can't understand - and even though we've shown all these scientific drawings about what it's going to look like twenty years from now. But there has been so many projects on the board that we should have completed before now. And what frightened me about the whole Master Plan - it's like we're being trumped because here you look for new projects when all the projects that was on the board before 2012 you started. Seems like we should have some of those projects ongoing.

We spend all the time talking about science but I'm, I'm concerned about the science that we're using because you can pay for the science that you want. What I'm saying is that we should be beyond talking about getting new projects. There's some plans that have been on the board since 1940. Maybe it might not be like some of these young scholars we have now but it's to help us protect our land.

What's frightening me about the plan when

I look at - some of these projects are not

going to take place until twelve years from 1 now, but the amount of money being spent for 2 project design. Seems like to me, people 3 connecting with Washington and people who are 4 5 all connected want to stay in the process where they could get money. And so if you're in with 6 7 somebody then you can sell for a company, and 8 you know for the next ten years that you've got 9 millions of dollars while people are dying.

22

23

24

25

I just think that we're being trumped by the Master Plan. I think the Master Plan, as I've always said, is the Master Plan. And that is a plan where those who are rich and influenced can make money. Because I can't see in America, all the scientific minds we have, why we're having projects starting fifteen years from now. And then you're taking projects out. As Benny Roussell said, the prospects - I'm looking for more projects, but you're taking them out. So I'm just concerned. I'm just - and I just hope at some point it will be changed, or really look at that, and compassion come in, you know, and truth come in and fix the power. Because to me, you know, we being trumped.

MR. SPEYRER:

25

Thank you, Reverend Edwards. Shawn, where are you? Shawn is back here. And then following that will, will be Lauren Averill with Jefferson Parish.

MR. ANGLIM:

My name is Shawn Anglim, I'm a pastor at First Grace New Orleans in Midcity. And I'm pretty certain that I'm the most uneducated environmental person in the room but I have been to four conferences in the last six months, including the mayor's conference. I just want to sort of repeat the things that have gotten my attention. One by one of our very respected New Orleans people who has been working on this forever. I won't say his name because what he said was so dramatic I need to allow him to say it for himself, but no one disputed this. He basically said south of New Orleans is not sustainable and we all know that. He said, "If you live in Miami we all know that it's over with. You can't get your yacht under the bridge anymore and there's nothing that's going to change that." And, "that every port has a significant issue like

we do." The one thing that's makes a 1 difference for Louisiana is we have thousands 2 of tons of dirt coming down the Mississippi 3 River. And thanks to Helen Rose Patterson who 4 took a group of pastors down to the diversion, 5 which in my understanding, is an accidental 6 7 diversion. And then we, we went out there on the air boat and she stopped and all this land 8 9 was there. Not a little bit of land but a lot of land was there. 10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And then the last thing that got my attention - my feeling is sort of like someone said earlier, how do you get people's attention? As Mr. Lopez said, we're talking the dramatic loss of land. And what Helen Rose Patterson did for this tour was she took your maps, and then she took communities, and she took the churches in those communities. And she said, "Based on sea level rise, based on the loss of land, this is what your church looks like." And I think it was in ten years. And you could see whether or not your church was under water. Now that get a lot of attention. And it might be helpful if, in the plan, if you took communities based on your

- 1 maps and based on your plan, and you showed
- 2 Main Street in those communities and whether or
- 3 not they were covered with water or whether,
- 4 with the Master Plan in twenty-five years they
- 5 were still there. And you show those pictures.
- 6 And I think that might really help get people's
- 7 attention. As Tony Lopez said, what we are
- 8 dealing with, which is a massive loss of land.
- 9 Thank you very much.
- 10 MR. SPEYRER:
- 11 Thank you. Lauren. And then on deck will
- 12 be Nicolas Bell.
- 13 MS. AVERILL:
- 14 Hi. My name is Lauren Averill. I'm the
- 15 Coastal Zone Coordinator for Jefferson Parish.
- 16 I wanted to just talk about a couple of
- 17 concerns that we have. Initially when we took
- 18 a look at the plan, there were two of our
- 19 crucial projects that were not listed in the
- 20 project list. But since then we have been able
- 21 to speak with you guys and are very happy to
- 22 know that there are details in levees, in all
- ten of those segments as well as phase two of
- 24 the long distance pipeline that shows from the
- 25 Barataria waterway, west. Both of those

projects are extremely crucial for coastal restoration in Louisiana, and Jefferson Parish also. And we are very grateful and happy that that's, that they have committed that to us.

Also, we have four other projects that made it in on the draft, but not the draft that was released in January. And also these projects, we would just like to see - it's not clear exactly on why those were not included. And that includes the shoreline protection on Lake Salvador, Barataria Bay grand marsh creation, more Barataria Bay marsh creation, and wetland shoreline protection. We just would like a statement that is consistent with the plan. And we understand that there is cost constraints, but those are still very important projects, and a better understanding of why those were not included.

And once again I know this is a daunting project that is due and to get something like this in place across the coast. And I thank you for working with us.

MR. SPEYRER:

Thank you, Lauren. Nicolas Bell, where are you? Is Nicolas still here? Let's go on

1 to Major Tracy Riley.

MAJOR RILEY:

Good evening. I am the host of the Watchtower Hour on WBOK, 1230 AM. And one of the purposes of the show is to get information out of this nature. I am also a resident of Plaquemines Parish and my home is just two miles north of a sediment diversion project that's on the plan at some point in the near future.

My question is, in terms of the funds required for these projects, is any of this money part of the BP oil spill settlement funds? And if so, at least for that portion of the funds, assuming this is a part of that, are those funds subject to federal procurement requirements or standards? Particularly for DPE contractors, meaning your small, your local, and your disadvantaged, and your contractors of color. Thank you.

MR. SPEYRER:

Thank you, Major Riley. Just for the record, we're not going to answer now but we will be happy to chat with you about that specific question. I've got one more sheet.

- 1 Mr. Ken Ragas, you're next. If anybody else
- 2 would like to provide a public comment -
- 3 MR. JOHNSON:
- I did submit a form out front, Arthur
- 5 Johnson.
- 6 MR. SPEYRER:
- We'll get to next, Mr. Johnson.
- 8 Absolutely. Ken.
- 9 MR. RAGAS:
- 10 Hi. My name is Ken Ragas. I'm from
- 11 Buras, Louisiana. I've been involved in this
- 12 | for twenty-five years. (Inaudible) And there
- 13 are some thing which are not factual. It's
- 14 been difficult to deal with this. You know,
- 15 I've lived through the destruction of the
- 16 marshes in the Buras/Empire area and I know
- 17 what caused them. And I know what's not going
- 18 to fix them. And I know the people in
- 19 Plaquemines Parish deserve better than we are
- 20 getting as far as protection from storm surge.
- I've been through it. And I'm not in
- 22 favor of sediment diversion. I lived at the
- 23 pass in Venice for twenty years. I had a boat
- 24 and I watched the Grand Pass just erode. Grand
- 25 Pass is 600 foot wide and 75 foot deep at the

- river. (Inaudible). And I'm just afraid it's
 not going to work. We deserve something better
 than that.
- There's a lot of misunderstanding. seen areas that claimed to have land built from diversions, and they don't take into account the land that was eroded and was (inaudible) out in the mud flats and stuff like that, you know? There is a lot of not factual information that's being presented. Thank you. MR. SPEYRER:
 - Thank you, Mr. Ragas. Mr. Johnson, I apologize for that. If anybody else would like to speak we are going to certainly give you a chance.
- 16 MR. JOHNSON:

Thank you. My name is Arthur Johnson. I am from Kenner, Louisiana. I am a, an independent geologist and a member and actually an officer in a number of local and national scientific organizations. What I want to say is, the nice thing that's kind of interesting in Louisiana. We have the most dynamic geology in the U.S. In fact, when I go into the schools I'm asking where we are right now when

the pyramids were being built in Egypt the coast line was somewhere around Covington.

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

With the Master Plan, there's a lot to like in that and I am very pleased with the work that has been done on that, but I notice the focus is on what's happening at the surface. And yet the subsurface is absolutely critical on this because of the dynamics of what is underlying us here. Active faulting that we see, in fact, if you drive the Rigolets and see the railroad. The railroad has to relevel the tracks every eight - twelve to eighteen months or the trains would jump off because of a fault that goes through there. you come down the Causeway and at about four miles south on the south bound lanes you hit a dip. You are crossing a fault. These faults lace our area. And on the down slope side of those faults, that's where a lot of our lakes are being created. What was open fields in the past, the river used to bring sediment in, just keep covering it over. Because we don't let the sediment in we now are - our coast line isn't so much eroding, it's subsiding. It's a natural process and what my concern is, if we

- 1 are not aware of where the faulting is, the
- 2 underlying geology, and you put some of these
- 3 structural protection in, crossing an active
- 4 fault. Over the longer term it will not be
- 5 successful.
- 6 There's a lot of ongoing work right now
- 7 with University of New Orleans, Tulane
- 8 University, LSU. As we are mapping these out
- 9 those resources are becoming available or are
- 10 available. I see Dr. Nancy Dare from Tulane is
- 11 here, it's a bunch of her students who are
- 12 doing this. We have resources at those
- 13 universities, Southeastern Geophysical Society,
- 14 New Orleans Geological Society. We have
- 15 information that needs to be brought into all
- 16 of these projects to make sure that they in
- 17 fact are successful over the long term. Thank
- 18 you.
- 19 MR. SPEYRER:
- Thank you, Mr. Johnson. Would anyone else
- 21 like to provide public comment tonight. Got
- 22 one more here. Robert. Okay. Thank you,
- 23 Robert. Please state your name for us.
- 24 MR. DESMARAIS:
- 25 My name is Robert Desmarais. And the name

Desmarais, I admit is hard to pronounce. 1 speaking on behalf of Francois Desmarais who 2 came here in 1720. As I was looking at the 3 plan I noticed that there was nothing 4 addressing the causes of the loss of the coast. 5 There has been some talk of sedimentation and 6 7 reintroducing sedimentation. That certainly is 8 one way to go, and needs to be considered much 9 more. But one that is noticeable by it's absence is the affect of the exploration for 10 oil and gas in south Louisiana. I have seen it 11 come and I have seen what it has done. 12 appreciate the wealth that it has brought. 13 But the time has come for us to recognize that 14 15 removal of the petroleum and gas from underneath our land causes it to subside. 16 the introduction of canals through all of the 17 18 marshes allows the land to be eroded by the 19 Gulf. These are factors that have to be addressed in the plan. 20 21 In my discussions with the Bureau of Ocean 22 Energy Management I was shown a map of the 23 Gulf. In the map the Gulf is divided into

three parts. The eastern part near Florida

there is no drilling at all.

24

25

In the western

- part near Texas there is very little. But the
 part off of Louisiana, Alabama, and Mississippi
 is a network of miles and miles of pipelines
 and ridges. I asked the man why was that the
 case. He said because the people of Florida
 object to it. Three times he said that to me.
 I finally said, "Are you trying to tell me
- I finally said, "Are you trying to tell me something?" He said, "Yes. I am." So I am passing that on to you.
 - John Berry who was here today, I don't know if you are in this room at this time,
 John. He is now one of my heroes. He brought suit to try to make the petroleum industry pay to rebuild the canals. So far it has gone nowhere. But I think in the plan we have to address the causes as well as what we can do to repair the land. Thank you.

18 MR. SPEYRER:

- 19 Thank you. Please state your name.
- 20 MR. JOHNSON:
 - My name is Happy Johnson, I am a resident of the lower 9th Ward. I would like to make a comment about the logistics of the meeting.

 5:30 downtown New Orleans is pretty difficult, as well as the fifteen dollar cost to park, is

a little prohibitive for many people. I think
if we are having a public meeting for public
comments we should be having public parking.

My other comment is about the plan. want to commend you all for the progress that has been made in terms of outreach and engagement, but I would ask that you take it a step further before the next plan is released in four years so that the process - that the process for engagement for, you know, communities matches the time invested that is mentioned in regards to the technicalities and the science for restoring the coast. I think it should - you should have that same emphasis on how we engage community members that are going to be affected by this plan. This year there are about two pages talking about engaging the community. I would like to see a chapter on how we systemically and intentionally engage communities of color that are often disproportionately affected by land Thank you. loss.

23 MR. SPEYRER:

4

Without any other hand raises I would like to reiterate the point that I mentioned

There is still multiple opportunities 1 earlier. for you to provide your official public 2 As you see here on the screen, we're 3 comment. going to accept official public comment through 4 5 March twenty-sixth. You are able to do that by going online at coastal.la.gov, there is a form 6 7 that you can fill out and submit. You can also 8 send us an e-mail at masterplan@la.gov. 9 you can also mail in your comments. And as Bren referenced earlier, if there is a meeting 10 you would like to have us attend or you would 11 like to chat with us again send us an email at 12 13 masterplan@la.gov., and we will do everything that we can to accommodate such request. 14 15 we appreciate you being here. What we are 16 going to now do is transition into the next portion of our meeting which is focused on the 17 18 fiscal year 2018 draft Annual Plan. Let's have a seat everybody. We are ready to get started. 19 20 With that, everyone, we ask you to please go ahead and get quiet. I would like to 21 22 introduce to those who are still here, Michael 23 Ellis, Executive Director of the Coastal

Restoration Authority. Let's have a seat

everybody. We're ready to start.

24

25

MR. ELLIS:

Well, I appreciate everyone coming out to hear the FY 18 draft annual Plan. I really appreciate you all coming out and participating in the Master Plan. It is very important to us and coincides with the FY 18 Annual Plan.

So what I'm going to do is going to be pretty brief. We will give you an oversight of what's the Annual Plan, a little bit about what to expect, and why we do the annual plan. And a little bit about some of the accomplishments that we have had in the past year.

So why do we do the annual plan? Well, first and foremost we are mandated to. And which, which is a good thing because it makes up plan for the, and budget for the next three years. This is how CPRA, you know, as Bren discussed earlier we not only plan the work, we implement the work, we oversee the work, and we monitor and maintain the projects. So this sets our plan in my mind on how we are going to deliver the work over the next three years some of the projects that you saw in the Master Plan.

So it requires us, like I said, to have a

three year budget. We have to find out how we are going to implement the projects. And also we have to give an update of where we are on the previous projects. This, real quick I will go though this, basically we are going to follow the same path as the Master Plan. And one thing I want to call out is the public comment period, it closes on March twenty-sixth 17. And I know that when y'all get through reading the Master Plan you are going to grab the Annual Plan and read that. Because for the numbers people it is actually pretty good reading.

In summary, what you are going to see in the 18 draft plan is a little bit about the two - of course what we did was - we accomplished the 2017 Master Plan which is very important, it's every five years. So in 18 we are going to see that kind of come to a close. But what you are going to see starting to ramp up are some, some newly funded projects. It's a pretty exciting time because we get some clarity on our dollars now. We know since the settlement occurred last year, we are going to start to receive in earnest in April the first

payments from the BP Oil Spill. So it's our job to figure out how to spend that money, how to project that money, when it comes in, and obviously when we expect to spend it and build the projects that we so dearly need.

Also you will see that in 18 we are going to be implementing larger projects and more complex projects. Like I said, we have spoken about those in the past, we have the money now to move forward with those. The diversions we spoke about earlier, the Calcasieu Salinity Project out west. It's a very large civil works project. These are very, very large projects that we feel that are necessary to repair our coast and protect our people. And because of that we are going to stand up a very robust adaptive management program in the coming years. We think that is critical to learn, to improve, to become better as an agency, and build better projects.

One thing to note as we start to ramp up some project programs, you are going to see some of the older programs like the SEAPP program start to decline in revenues. So as those go down they will be replaced by new

- funding sources, and I am going to touch on
- 2 those. Real quick, we, our major funding
- 3 sources of course we receive state mineral
- 4 revenues. In the past I would like to point
- out that we received around \$25 to \$30 million.
- 6 Primarily that's how we operate as an agency.
- 7 The next three years we project that to be down
- 8 to around \$14 million. So we as an agency have
- 9 to become even more efficient in how we do
- 10 business. The Gulf of Mexico Energy Security
- 11 Act, we anticipate that kicking in the
- 12 beginning of federal fiscal year 2018. That is
- 13 upwards of around \$140 million a year that will
- 14 go to CPRA, I think it is a total of \$176 to
- 15 the state, the remaining balance goes to
- 16 individual parishes impacted or coastal
- 17 parishes.
- 18 Other sources of funding, the NFWF, or
- 19 National Fish and Wildlife Foundation, Natural
- 20 resources, damage assessment, and the restore
- 21 dollars. Those are all related to the oil
- 22 spill. And what is important to know about
- 23 those yes, we are going to receive those
- 24 dollars over the next eighteen years but there
- 25 are restricted in many cases on how we can use

those. So if you can imagine all of the projects that we have to do, we have to match all the funding sources when they come in, and what we can spend them on.

So that's what the Annual Plan does. That is why I encourage looking at the Annual Plan. And lastly, we still anticipate to receive GPRO dollars. That's a program that has been around I think since 1990, but it is a very beneficial program for us and it will continue to be.

Notable accomplishments. I just want to touch on these real high level. These are six projects, I think you can go to section two, I believe, of the Annual Plan it will give you a summary of all the projects that are complete, we completed in 16, but look for the dollar value real quick. In 2017, or FY 2017, which was mainly in last year's Annual Plan we completed eleven projects. These are six that represent some of the eleven. They total around \$330 million, so we are very happy about that. It benefitted over 3,500 acres of wetlands.

Currently moving into 18, FY 18, there will be twenty-nine projects that are in

continued construction. This has a contract 1 value of \$5.5 billion, and we anticipate 2 benefitting 300 miles of wetlands and over 3 20,000 acres of wetlands. What I would like to 4 5 stress here is we have been doing a lot of work in the past, a lot of work ongoing. 6 7 agency - I'm new, I am very fortunate to be 8 here because it has a tremendous track record 9 of successfully building projects. As we move 10 forward, we have a tremendous, tremendous amount of work to do. We understand that and 11 12 we are very excited about that. But the Annual 13 Plan, like I said, lays that foundation and provides the framework for how we are going to 14 15 deliver those projects. One of the tables - you'll see many 16

One of the tables - you'll see many tables, many graphs, many charts, but this represents our FY 18 expected expenditures.

A couple of things, his represents around \$663 million for next, for FY 18. A couple of things I want to point out. You see the graph, the very large green section represent fifty-six percent is in construction. So we are talking about all these projects we are about to start. There is a tremendous amount of

17

18

19

20

21

22

23

24

25

- construction, ,once again, going on right now.

 Eighteen percent in design, eighteen percent of
 the \$660 million is going toward design, which
 is important for me because I, as we plan and
 design these projects we know that in the back
- end we are going to have a tremendous amount of
- 7 construction. So you are going to see that
- 8 eighteen percent start to shift more towards
- 9 construction in FY 19 and FY 20.
- This is one example of a schedule in the
- 11 Annual plan. And one thing I would like to
- 12 note is we divide the phases of the program
- is planning, design, construction, and them OM.
- 14 So that's, that's how we track our progress.
- 15 That is one of the schedules that you will see
- 16 if you look at the Annual Plan.
- 17 And really that's it. I went through it
- 18 very fast because I want to get home for
- 19 dinner. But we are, we are also available for
- 20 comments. And it looks like we got some so
- 21 great.
- 22 MR. SPEYRER:
- 23 At this point we don't have any forms for
- 24 public comment on the fiscal year 18 draft
- 25 Annual Plan. We do have someone who would like

- 1 to speak. Come on up here.
- 2 MS. KENNA:
- 3 Hello. My name is Kenna. I am a resident
- 4 of Plaquemines Parish. I just have a question
- about the slide with the major funding sources.
- 6 You mentioned something about the remaining
- 7 balance going to coastal parishes. Remaining
- 8 balance of what and how does it go to the
- 9 parishes. Does that go through the government
- 10 or, you know, where is it going?
- 11 MR. SPEYRER:
- I will say that we are not going to answer
- 13 questions here. But we are able to wrap up and
- 14 walk out and we will certainly catch up with
- 15 you in a second.
- 16 MAJOR RILEY:
- 17 Again, I am Major Tracy Riley, Retired,
- 18 U.S. Army, host of the Watchtower Hour. A
- 19 previous question, or comment was made about
- 20 the community engagement for the poorest
- 21 communities who are also impacted by these
- 22 projects. I see an opportunity for those
- 23 communities to be to participate, really, in
- 24 the contract opportunities from those two
- 25 slides, into the schedule for this upcoming

year. So this is more of a comment and request 1 that all efforts, as reasonable as possible, be 2 made to give opportunities through job 3 placement or contracts. Opportunities, in 4 5 particular, for those communities. Thank you. MR. SPEYRER: 6 7 Thank you. Any other comments? Thank you 8 very much. We appreciate you sitting with us 9 all night, (inaudible) to the big crowd. We'll be walking out and we're certainly happy to 10 11 interact and answer any questions that, that we can. As a sort of reminder, just like the 12 13 Master Plan, comments on the Annual Plan can be made until March twenty-sixth. Here's how you 14 do it. Write it in, different e-mail 15 16 addresses, or you can also submit your comments 17 online. Thank you very much and we appreciate 18 your being here. 19 (The public hearing concluded at 7:30 p.m.) 20 21 22 23 24 25

1 REPORTER S PAGE

I, Tricia Gregory, Certified Court
Reporter, in and for the State of Louisiana,
the Officer, as defined in Rule 28 of the
Federal Rules of Civil Procedure, before whom
this sworn testimony was taken, do hereby state
on the record:

That due to the interaction in the spontaneous discourse of this proceeding, dashes (--) have been used to indicate pauses, changes in thought and/or talk overs; that same is the proper method for a Court Reporter's transcription of proceeding, and that the dashes (--) do not indicate that words or phrases have been left out of this transcript.

Also, any words and/or names which could not be verified through reference material have been denoted with the phrase "(inaudible)."

Tricia Gregory, C.C.R. #2015008

1 CERTIFICATION

I, the undersigned reporter, do hereby certify that the above and foregoing is a true and correct transcription of the stenomask tape of the proceedings had herein, taken down by me and transcribed under my supervision, to the best of my ability and understanding, at the time and place hereinbefore noted, in the above-entitled cause.

I further certify that the witnesses were duly sworn in by me in my capacity as a Certified Court Reporter pursuant to the provision of R. S. 37:2551 et seq. in and for the State of Louisiana; that I am not of counsel nor related to any of the counsel of any of the parties, nor in the employ of any of the parties, and that I have no interest in the outcome of this action.

I further certify that my license is in good standing as a Court Reporter in and for the State of Louisiana.

24 Tricia Gregory (#2015008)

MR. SPEYRER:

Good afternoon, everybody. My name is Nick Speyrer. It is certainly a pleasure to be here in Houma for what is clearly an important meeting not just for us, but certainly for all of you from this region and elsewhere. thank you for taking time out of your busy schedules to participate in certainly this important meeting. We'll go ahead and we'll get some more chairs in here, and there are some in the front as you come on in. Just a quick run to show what to expect from here on out in the evening. We'll be happy to stick around as long as we need to. In a second Johnny Bradberry, the chairman of CPRA will provide some opening remarks and will recognize a few special guests. Then we'll turn the program over to Brent Haase, who will give about a twenty-five, thirty minute presentation on the draft of 2017 Coastal Master Plan. He will talk about the work we did in development, he will talk about the work to come as we work through this public comment period.

At that point in time we will then open up the floor to hear from you, which is really why we are here, to hear from you to provide your public comments. We'll talk about this a little bit more as we get into the day. We will ask everyone to please be respectful in the audience in keeping their comments to three minutes. And you will have needed to complete a form of the white sheets that were in the back, and we'll be passing more of those around this evening. You'll certainly have an opportunity to put your name on it and get called up to the mic and provide your official public comment.

Once that concludes we will then turn the presentation over to Michael Ellis, Executive Director of CPRA. And he's going to do a presentation on the draft fiscal year 2018 Annual Plan for CPRA. At that point in time we will them open the comments back up to the floor for official public comments on that document. So, sort of, how long we stick around depends on how many comments we hear. As long as you need us to be here as we work through those portions of the presentation.

Certainly a lot of media coverage here. I do want to recognize as well, we've got, we've got a live Facebook feed. It's a, it's a tactic we started using at our public meetings last week. We had several thousand people watch these presentations both live and in recording as well. So just more ways we are trying to provide information to more people about the work that we are doing. So that's our plan for tonight, we appreciate you, your being here with us. And with that I'd like to introduce to you Chairman Johnny Bradberry with the Coast Protection and Restoration Authority.

MR. BRADBERRY:

well, good evening. Can you hear me back there? It's really good to be here tonight. It's a great turnout. You know, we've had two of these meetings already. We are required by state law to have three of these across the coast and we have had two, one in New Orleans and one in Lake Charles. We had really good turnouts, but I think tonight we may have more people than we did at the other two.

Before I say any more comments I want to introduce some people in the audience, some

- 1 elected officials. President Gordy Dove, there
- 2 he is. Senator Chabert. Who else have we got
- 3 there? Representative Zeringue, thank you for
- 4 being here. Representative Beryl Amedee.
- 5 There are several council members here from
- 6 Terrebonne Parish that I'll let Gordy Dove talk
- 7 about when he gets up here in just a second.
- 8 We have Windell Curole, not an elected official
- 9 but a member of the CPRA Board here tonight.
- 10 Thank you for coming, Windell, where are you?
- 11 And then we have a couple of former politicians
- 12 and legislators, Senator Reggie Dupre. I'm
- 13 sure you've heard by now, you can't not live in
- 14 Terrebonne Parish and not know that Reggie had
- 15 a hand in putting this together. And then
- 16 Parish President Charlotte Randolph, where are
- 17 you? And then we have David Carrell with
- 18 Congressman Garrett Grave's office.
- We're going to let a couple of, a couple
- 20 of our elected officials come up and talk in a
- 21 minute but I want to say a little bit about
- 22 what we're trying to do here tonight and why.
- 23 As you know the master this is the third
- 24 iteration of the Master Plan and it's critical
- 25 to what we do and how we address, what we do to

our coast and how we address our coastal 1 We - this is the third iteration of 2 issues. that plan. We started back in 07 with the 3 first plan, and Reggie was critical to that 4 5 plan. Remember that, Reg? And I - and so was I as the Secretary of the Department of 6 7 Transportation and the Secretary of DNR we 8 combined our forces and our efforts and we put 9 together the first plan. This plan, and the 10 plan in 2012, are step-change, step-change plans in changes from the original plan. 11 what you're going to see here tonight is, is a 12 lot of good science, you're going to see a 13 reflection of projects that hopefully reflect 14 15 what you think. We spent a lot of time in the public trying to get public comments. We spent 16 a lot of time with scientists trying to get 17 18 their comments. We tried to apply the best 19 approach and practices that we can. But at the end of the day it's about how you feel about 20 what the plan is going to bring to you and what 21 it means to you. And so this is another 22 23 opportunity for you to get up here and for you 24 to make public comment around how you feel 25 about this plan.

Hopefully Brent will do it in twenty-five 1 to thirty minutes. Now, you've got to 2 understand, this is a six thousand page plan. 3 But he's going to try in twenty-five to thirty 4 5 minutes to give you an overview of the quality of the plan, what went in it, what the 6 7 assumptions were, how the projects were 8 selected, and give you hopefully, again, a 9 better appreciation for how the plan came together. And, you know, your public comments, 10 your comments are extremely important to what 11 12 we're trying to do here. This is a draft plan. 13 That means that the plan is subject to change depending upon the quality, and the logic, and 14 15 the sensitivity, and your feelings around what you think you want to do in your particular 16 So it is subject to change, it is not 17 area. 18 set in stone at this point in time.

So I encourage you to come up here and to make those comments. We want to listen to you, we want to hear what you have to say. We're going to take that back and rationalize these comments. I want you to know we're committed to doing that. And I'm sure that you have legislators here that are going to ensure that

19

20

21

22

23

24

25

we do that. They represent you very well,

particularly Senator Chabert and Zeringue, I

guarantee they do. And so they're going to

help us to make sure that this process is

representative of what it is you want to see in

the plan. Not everybody is going to be happy,

okay?

8

9

16

17

18

19

20

21

22

23

24

25

You'll see in a few minutes that there were two hundred nine projects that were submitted for consideration in this plan. Αt the end of the day, if you're going to find fifty billion dollars over fifty years, you can only do so many projects. And so you'll hear that only a hundred and twenty of those projects are going to be selected. All those people, and all those areas and communities associated with those hundred and twenty projects are going to be very happy. The other eighty-nine projects? Well, we're going to have some debate about that and you're not going to see some happy people and happy communities. You know, we've got constraints, and this is a constraining plan. Again, hopefully you'll get a, a good appreciation for what's in it and what it means to you.

again, I encourage you to do that.

Having said all that, Gordy Dove wants a few minutes and I asked him to keep it less than ten. Come up here, he'll hear me, you know, ring a bell, I guess. But he'll come up and say a few words, and then Senator Chabert wants to say a few words about his position on the plan and what - how he views it and what he wants to see addressed. So, President Dove, it's yours, you're on the clock.

PRESIDENT DOVE:

Thank you, Chairman Bradberry. It's always a pleasure to work with the CPRA. And I want to thank the other members of the CPRA.

Terrebonne Parish and the State of Louisiana has built its hurricane storm protection system and multiple lines of defense. You know, you know, we started in Morganza. We decided to build Morganza ten years ago when we saw the federal government wasn't going to, wasn't going to come to our rescue. We, the people of Terrebonne Parish put up a three-quarter cent sales tax, the State of Louisiana put up approximately \$175,000,000.00, with \$350,000,000.00 in total, we, you know, we now

have eleven operations, eleven operations of flood gates and thirty-five miles of levees, with another about fifteen miles to be completed.

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

No one strategy is sufficient to achieve our ultimate goal. Number one, we have the barrier islands, the first line of defense. Which is, right now as we speak there's a dredge out on Whiskey Island that is starting, that is digging a channel to get, to get started to pump 9.3 mor million cubic yards of sand on, on Whiskey Island at a cost of about \$118,000,000.00. This is restoration, this is ongoing, this is an island that we started working on four or five years ago, and I thank the CPRA for keeping that project moving forward. Something I need on the Master Plan, which I will discuss with Chairman Bradbury, is the lake rim on Terrebonne Bay was taken out of the 2017 Master Plan, which we had in 2012 Master Plan. And I cannot stress the importance, of course, and Chairman Bradbury is familiar with what I'm talking about because we - on the east side of Terrebonne is where we're getting, we're getting eaten out the

1 worst on high salinity levels, as you all know.

2 The west side, we have projects going in that

3 area. But unless we put these, I call them the

4 land bridges, or you can call them a rim,

5 around Terrebonne Bay. We will lose the

6 eastern side of, of Terrebonne Parish and the

7 western side of Lafourche. This is critical to

8 us and I ask this board, I've already formally

asked them to put that back in. We vetted that

10 out in 2012, a lot of you in here supported it.

11 And it was, you know, it was taken out and so,

12 you know, we are asking it back. It wasn't

13 2007, it was in 2012, and for some reason it

14 was taken out in 2017.

9

15

16

17

18

19

20

21

22

24

And, you know, on the 2012 plan we also had all our barrier islands to be rebuilt in the plan. In the 2017 the word problematic was used, which we take to use maintenance. We discussed that with CPRA, we're hoping they go back to rebuilding our islands, not just maintaining them. Now, they are, they are getting - this year they should go forward

23 with East Timbalier Island, which is in

Lafourche Parish but that is permitted to

25 Terrebonne Parish. So that they have moved

forward with and I thank them for that. But we

- 2 still have Timbalier Island, we have East
- 3 Island, Trinity Island, and Wine Island. And
- 4 we need these islands to be put back in there
- 5 to be rebuilt, not on a problematic
- 6 maintenance. And what I understand, they are
- 7 looking at the language on that.
- 8 And under the 2010 RCA Eco-restoration
- 9 Terrebonne Barrier shoreline restoration
- 10 completed by the Corps of Engineers and the
- 11 CPRA, the Terrebonne Basin Barrier Islands is a
- 12 unique ecosystem that helps to maintain the
- 13 integrity of the Gulf shore islands, they
- 14 protect the interior coast from further loss.
- 15 Aside from supporting coastal habitat, the
- 16 coast of Louisiana is the first line of defense
- 17 | for protecting wetlands, inland bays, and main
- 18 regions from direct and effects of wind. And
- 19 basically, what the Corps said in the study is
- 20 that all of our islands work in a unique area
- 21 to protect Terrebonne Parish. To do a couple
- 22 of them and maintain the rest with our passes
- 23 so wide, we're defeating the purpose since they
- 24 protect the (inaudible) and Montague area on
- 25 the east side of Terrebonne. So that is

something that we are going to meet with the CPRA, the delegations with me, Reggie and everyone. We've had meetings with them.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So with that, I'm trying to cut it short here. And another thing we are looking at is the sediment pipeline that was just released. We could build a pipeline, a thirty-six inch pipeline. We had a study that, that was put in by Terrebonne Parish and the State where we could put a thirty-six inch pipeline from Atchafalaya into the Lake Barre area, and pump over the years approximately 80,000,000 cubic yards. I think this is a, the future of Terrebonne for building up, using sediment from the Atchafalaya. And with this, Mr. Chairman, you know, I want to thank you and the Board for all your, your hard, continuous work to protect and restore Louisiana. You know, the west side of Terrebonne is, has the influx of Atchafalaya water, as you all know. The east side is where we are getting eaten out and we have to do the land bridge and the rim, and we have to restore our barrier islands. And, of course, you know Morganza is full steam ahead. You know, we're running Morganza, there is no doubt about it.

- 1 We just, today we just transferred \$16.8
- 2 million dollars to Terrebonne Parish for the
- 3 Levee Board and there was an announcement that
- 4 for the final floodgate. We should put out for
- 5 bids in the next month and a half, two months.
- 6 And that's the last floodgate in the southern
- 7 regions.
- 8 So with that I thank each and every one of
- 9 you. We have a great crowd, it's so important
- 10 everyone takes home what's happening here. But
- 11 we are moving forward thanks to a lot of
- 12 people, you know, there's a lot of people that,
- 13 that have gotten Terrebonne Parish to this
- 14 point. And thank y'all, every one for coming.
- 15 And thank you, Mr. Chairman. Was that short
- 16 enough?
- 17 MR. BRADBERRY:
- 18 Congratulations, that was six minutes.
- 19 Holy smokes.
- 20 PRESIDENT DOVE:
- 21 Well, wait. I got four more.
- 22 MR. BRADBERRY:
- 23 As you can see the president has no
- 24 passion for this topic. Senator Chabert. And
- 25 by the way, when you talk to Gordy, and

- ninety-nine percent of the time the word rocks
 in going to come up. If you'll notice, he
- didn't say rocks one time in his presentation.
- 4 PRESIDENT DOVE:
- 5 But I still mean it.
- 6 SENATOR CHABERT:

23

24

25

7 I can't tell you how impressed I am with 8 this crowd. I really appreciate y'all, from 9 the bottom of my heart, showing up and showing 10 your passion. One thing that surprised me when I got to Baton Rouge seven years ago was how 11 12 little my colleagues knew about the challenges 13 that, you know, people from this region, you know, not just Terrebonne, Lafourche, and St. 14 15 Mary, face on a day-to-day basis and how 16 complex it is, how complicated it is. And, and I tell them all the time, all right? Just look 17 18 at Terrebonne Parish. You've got half of the parish that's starving because they don't get 19 20 any silt and they don't get any sediment, and the salt water is just destroying everything 21 there is. All right? On the west side, Lake 22

because that which is being deprived out east

You've got an area that's thriving, lush,

Boudreaux basin is kind of the dividing line.

1 is coming so naturally for the west. so that the people in St. Mary have a problem 2 because they have too much of it. The science, 3 the technology, and most important the funding, 4 5 you know, just quite ain't there yet. enable us to do everything that we want to do 6 7 - I tell you a funny story about how 8 complicated and difficult the issues that we 9 face are. You know, one of the first folks 10 that were able to get an audience with the new governor, Governor Edwards, was, you know, our 11 12 folks from Terrebonne Parish, Reggie, Gordy, 13 myself. And, you know, Gordy and I, I mean, at the Capital, I mean, people saw us coming 14 15 together and they knew it was a coastal issue 16 and how hard we were going to fight for our 17 piece of funding and how desperate our needs 18 are. And we pulled on that rope so many times in the same direction, okay? And then he gets 19 20 elected parish president, and I get elected to my next term, and we've got the new governor, 21 22 and this is going to be his first impression of 23 the camaraderie. The force that is Norby and 24 Gordy, you know, Senator Chabert and President 25 Dove. So we're sitting at the conference room

table on the fourth floor, and he is in the 1 middle, Gordy is to his right and I'm to his 2 left. And, you know, all the technical folks 3 were there, Mark, and everybody, and Reggie, 4 5 and they stared talking about the need for funding for the Falgout Canal floodgate which 6 7 is a lynchpin of a water control structure with 8 marking.

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And I'm happy to say that we did find a little cooperative endeavor between the parishes to, once again, hold up our end of the bargain of not just going to Baton Rouge and saying, "Hey, we've got a \$30,000,000.00 project, will you give us thirty million?" Thanks to the wisdom, and the desperation unfortunately, of the people of our area we taxed ourselves and we go to the Capital and we say, "We need the State to come up with half of that because we can only put up so much." That's one of the main reasons why we've been successful. So it's all kumbaya and everything is getting along, and then we move on to the next phase and, and Gordy starts pushing. one direction he starts talking about rocks and I start pushing from another direction.

1 the governor is in the middle, he's going one way and I'm going that way. But we're both 2 3 fighting for protection and the betterment of Terrebonne Parish. And once we got the mission 4 5 accomplished of getting him to agree to one thing, the governor got a true taste of how 6 7 complex it is. When that force that so many 8 times is going in the same direction, can have 9 a difference of opinion.

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And the Master Plan is representative of that. You look at the letters on the screen, it says Coastal Protection and Restoration Authority. All right? Now, they're going to use a phrase risk reduction, and that's fine. Okay? But at the end of the day that means protection, that's the name of the doggone agency for God's sake. I'm going to keep it simple for y'all, all right? We ain't always going to agree, but everybody in this room, the folks that do this 24/7/365 on not only the people that are here, the people across the coast, the people in our state, but America. Everybody knows how important this is. I saw some folks from Buffalo coming down here from Bayou Gray who helped volunteer and plant

1 vegetation on restoration projects. amazing, all right? That is amazing that 2 people are aware of the challenges we face. 3 But here, where the water meets the rock, or 4 5 lack thereof sometimes, all right? There is, there is concern and there should be. 6 7 everybody in this room is going to hear whoever 8 walks up to the mic and gives their public 9 comment. And not everybody is going to be 10 bobbing their head in agreement. The most important thing is that we're doing something. 11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

I want to publicly applaud CPRA for the very hard work that they've put into this plan. And just to give you a little insight into how the process is going to work, Bren Haas, and incredibly bright man, I enjoyed working with him. They're going to walk you through the process for approval of this plan, and after they include public comment, we've got to tweak this however we've got to tweak it. It's going to go to CPRA Board and then it's going to come to the legislature. And I chair the Senate Natural Resources Committee, and it's going to go through the House Natural Resource Committee, which Gordy used to chair. The

- 1 House Transportation Committee, the House for a
- 2 full vote. It's going to come over to the
- 3 Senate. So I want you to be fully informed
- 4 that by the time you get to the Senate you
- 5 guys are tired of seeing me already. My staff
- 6 and I have met with them for literally
- 7 four-hour sessions and said, "We need to have
- 8 another one." And we've got one, I think it's
- 9 next Monday. Right? So I'm, I'm as involved
- 10 and immersed in this as anybody could be, and
- 11 now they know why. Because this is what I've
- 12 got to come home to and these are the people
- 13 that I've got to face.
- 14 So I appreciate your hard work. Thank
- 15 you, too. Thank you for being here.
- 16 MR. BRADBERRY:
- 17 Thank you, Senator. And, no, we're not
- 18 tired of seeing you, yet. Before I turn it
- 19 over to Brent for the program I need to say
- 20 something about your governor and tell you how
- 21 he feels about coastal activities, and about
- 22 the condition of our coast, and about the
- 23 situation we are in. This governor is indeed a
- 24 coastal governor. Not once has he told me,
- 25 "Johnny, go look at that project over there and

make sure you work with this legislator and 1 make sure you get that in the program." More 2 than once he has helped protect our money, 3 okay? He is totally immersed in this effort, 4 5 he is genuine, he listens, he is a hunter, he is a fisherman, you know, he is appreciative of 6 7 what we are trying to do. And more 8 importantly, he understands the sensitivities 9 around all the issues we have around our coast, 10 the oyster men, and shrimpers, and fishermen, and the oil and gas companies, etc. 11 I mean, 12 I'm telling you, you have a coastal governor. 13 Not once did he tell me to, to go do something specific. He said, "Be fair, be urgent, let's 14 15 get results, let's make sure that we put projects on the ground, let's make sure that we 16 17 keep this money in Louisiana. Let's try to 18 use," - Okay. I want my cake and I want to eat it, too. I want to have the best science, 19 I want to have the best project. 20 Sometimes that means I have to bring in experts from 21 22 somewhere else. But we have a focus on, and he has made it very clear to me, that we want to 23 24 use as much local talent and local input as we 25 can. Keep the money in Louisiana. And Lord

- 1 knows we need it given the condition of the oil and gas business today. So I wanted you to 2 know how he feels. He is a coastal governor, 3 ladies and gentlemen. And if you don't believe 4 5 me just, I mean - when have you heard of a governor sitting in a room dealing with DOTD, 6 7 or hospitals, or coastal activities? We had 8 him in the room for six hours, okay? Listening 9 to all our issues on the coast, educating him on what the issues were, and getting his input 10 on those things. And then we had him another 11 12 four hours, okay? Doing the same thing, 13 bringing him up to speed on the Master Plan. That's sort of unprecedented. I haven't, you 14 15 know, I haven't been in government that long 16 but I haven't seen a bunch of that in the past in the State of Louisiana. 17
 - So, again, I just wanted to give you an appreciation for the fact that you do have a coastal governor. And he is willing, and is, and does listen. And he is very much behind what we're trying to accomplish.
- 23 So having said that if we are ready.
 24 Brent, where are you? You can have it.
- 25 MR. HAASE:

18

19

20

21

22

Thank you, Mr. Bradberry. These are tough acts to follow so I'll do my best. Thank you all for being here tonight. This is, as was already discussed, a fantastic turnout. I think it's really evidence of the fact that, you know, you all are certainly aware of the fact that this is ground zero for the issues we are going to be discussing in terms of land loss and the issues across our coast that that land loss affects. And that's certainly evidenced by the turnout here tonight and by the passion of the folks, and the interest of the folks in this area in what we're doing. So I want to thank you for that.

Before I get started I just want to point out, you know, this tagline here, "Committed to our coast." And it goes to what I just said, I think. But I'd like to echo, perhaps, Senator Chabert's comments in that we are real confident there's a lot of good stuff in this plan. One thing we also know is there's a lot of good stuff that's not in this plan. And so there are some things that folks will be happy about and some things that Chairman Bradberry mentioned that folks, you know, may not be all

that happy about. But at the end of the day I
hope you get an appreciation for the process
that we're going through and an appreciation
for some of the hard decisions that go into
trying to, to figure out, you know, what are
those best things that end up going into the
plan. So -

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So we are the Louisiana Coastal Restoration and Protection Authority. We are the single state entity charged with developing, implementing, and enforcing a Master Plan for coastal Louisiana to, to help protect our citizens from storm surges associated with hurricanes and storms, and to restore our ecosystem across our coast, our coastal ecosystem. So, again, you folks are more aware of this than many. This is a land of historical - a map of historical land loss across coastal Louisiana dating back to about 1932. About two thousand square miles of land have been lost in that time. You can see that noted here in red, that green is land gain on this map. And if we look out into the future, predictions are pretty grim as well, frankly. If we don't do anything about that historic

loss or the loss that we might, you know, we might experience into the future, we anticipate losing more coast than that. This certainly is not a good thing.

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Why is it important? Again, I'm preaching to the choir here. But coastal Louisiana is a national treasure. Over two million people live in coastal Louisiana. And I'm not going to go through each of these stats, but in terms of fishery production, water fowl production, commerce, transportation, and so forth, Louisiana provides tremendous benefit, not just to this region, but to the rest of the nation, and indeed the world. We're investing in our coast. As we speak, just a few examples here, whether it's over in Calcasieu Parish, in Cameron Parish, a hundred million dollars of recent of investments of coastal industry. see the impacts in terms of jobs and the dollars associated with that. For all of America, of course, Port Fourchon is important in terms of jobs creation and support of the oil and gas industry in the, in the Gulf of Mexico. And then you can see the economic benefit associated with the potential deepening of the Mississippi River and the impact it might have on transportation and commerce, again, nationwide.

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And again, we know we're worth fighting for. And preaching to the choir, but in terms of some of the dollar figures associated with the benefit and the worth of coastal Louisiana. You know, we want to put these up and make sure folks are aware of these. These are things that we need to be proud of, these are things that we could use when we go to Washington to talk about getting dollars to come to the state and for some of the projects we want. Or when we have a buddy that might be visiting us from the Midwest that's coming down here for a fishing trip and wants to know, "Why is coastal Louisiana important to me? I live in Minnesota," or wherever it may be. So all this, that information is available in the draft plan.

So a tremendous amount of work has occurred to date over the last decade or so.

These are sort of some of the stats on that.

About twenty billion dollars has been secured for coastal Louisiana. Much of that has been

executed in terms of projects that are on the ground right now, or going on the ground right now. A hundred and twenty million cubic yards of dredge material has been used to build marshes, barrier islands, or ridges. Other wetlands across our coast are benefitting.

Over 36,000 acres of land, about 282 miles of levees have been built or improved, and over sixty miles of barrier island shorelines have been built in the, again, just in the last decade. And just by way of where most of those projects are, this is an exhaustive map, this is where many of those are. You can see the locations of most of those projects.

And there's work going on now. President Dove, you know, mentioned this. But, you know, whether it's the bayou in the east part of the state, Whiskey Island is underway right now in this neck of the woods, or Oyster Bayou out in Cameron Parish. We're turning dirt now, we're doing work as we speak. Soil is being moved to create wetlands. And there's more to come. So you'll hear about a little bit more of the, sort of, the more to come if you stick around for the Annual Plan presentation once we're

- 1 done discussing the Master Plan here today.
- 2 But just to let you know there's roughly
- 3 \$663,000,000.00 worth of expenditures, new
- 4 projects just like this one, identified for FY
- 5 18. And it will be discussed, again, after we
- 6 get through the Master Plan portion of this
- 7 event.

24

25

8 So, so what is the Master Plan overall? 9 What is it? People ask me this all the time. 10 And it's, to me it's really two things. way to make really hard decisions. So, none of 11 12 this is easy. I mentioned earlier, there are 13 lots of new projects out there that are not all in the Master Plan. So how do you decide which 14 15 ones are the best, which ones do we think can do the most good for the most people and the 16 most good for our coast? And the Master Plan 17 18 provides a framework for us to be able to make those hard decisions. And then at the end of 19 20 the day, once those decisions are made through this process it's a list of projects. 21 22 the number of projects that we - that guide the work that we do, that CPRA - that again, 23

is the guiding document for the projects that

we implement, or the projects that we get on

the ground across our coast.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Why are we updating it? Why are we doing another plan? Well, first we are legislatively mandated to update the plan. It's the law, we have to update it every five years. But also there's some real practical reasons to do that. You know, first of all, as you all are aware more that many, many folks across our state, our coast is a dynamic place, it changes minute to minute, hour to hour, certainly year to year. So as that coast is changing, the plan that we have for that, for that coast needs to be updated. We need to be able to adjust to those changes. Predictions for our future change as well. We are going to talk a little bit about some future scenarios, and you may have seen some of them. Sea level rise and some other changes in the, in the 2017 Master Plan. Well, those predictions change as well, so updating the plan around those.

We also, you know, I talked a little bit about much of the work that has gone on over the last decade. We've learned a lot from that work. So we learned how to do things better, we've learned how to spread our dollars more

efficiently so that we stretch those dollars
and are able to build more projects for less
money. And technology improves as well. So
updating the plan allows us to roll all those
lessons learned, all those changing predictions
and our changing environment into the plan as
we, as we move forward.

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So some of the key differences between 2017 - yeah, 2017 and the 2012 plan. First we have improved our science and technical analysis, of course. I always say the ink wasn't dry on the 2012 plan when we began took a step back and said, you know, what are the things that we can do better, what are the things that we need to improve on, how could our tools be better, should we change some things, should we be doing some things differently. And we took a good, hard look at that. And the plan will incorporate many of those changes, improve the tools that we use in developing a plan. We incorporated some new ideas and information that, just now, in terms of lessons learned. But we also, we don't think we know it all, what the right projects are, what all the perfect projects are.

if we want to, if we want to incorporate those new ideas and new information. And so, in fact, in 2014 we made two phone calls for new information for new projects. Had tremendous response to those and we had a number of projects admitted to us by parishes, individuals, anybody could provide new ideas for projects. And many of those were part of the 2017 - part of the evaluation, and many of

those ended up getting included in the 2017

Master Plan.

There's an increased focus on flood risk and resilience and I think you'll see that - hopefully you saw some of that before the meeting here, but also evidenced in the discussion and the more robust development of our non-structural risk reduction, or protection program. There's an increased emphasis on community in terms of how the changes across our coast, either with the plan or without the plan, affect - the whole reason we're doing this is first, for the people, right? It's for our communities. How does all this affect our communities and our people's ability to live on the coast? So it discusses

things like our, our capability of insuring
ourselves and things along those lines. It's a
little bit of a less technical document than
the draft plan itself. So we encourage you to
take a look at that. And we're pretty proud of
it, we think it's a nice, a nice companion
piece to the actual plan.

We also expanded outreach and engagement. And I'll touch on that in a little bit, in just a little bit. And we've also got a little bit of clarity in terms of where our funding situation is. So when BP obviously settled, that litigation settled, and so we got a better idea of what funding might be come into stake over the next ten or fifteen years. And because of that we are able to move some of the funding that we might have expected to expend later in the fifty year project in the Master Plan earlier. And obviously, also recognizing that sense of urgency that Chairman Bradberry and the governor have expressed.

So in terms of objectives of the plan, there are five of them listed here. We want to protect our citizens from flooding. Again, flooding associated with hurricanes and storm

1 surges along the coast. We want to harness the natural processes that built Louisiana in the 2 first place. It just makes sense to, to use 3 those free processes, obviously, that are 4 5 generally cost effective in terms of rebuilding our coast. We want to provide those coastal 6 7 habitats that are important to both the commercial and recreational activities. 8 9 Cultural heritage is something that is really near and dear to all of our hearts. 10 again, it's one of the reasons that we live 11 12 It's why we love Houma, it's why we love 13 New Orleans, it's why we love coastal Louisiana, and we want to be able to preserve 14 15 that as best we can. And that heritage is, you know, intricately intertwined in our coast and 16 17 our Gulf ecosystem. And we want to provide for 18 a working coast. Most of the stats I mentioned 19 earlier in terms of the benefits of coastal Louisiana to the nation relate to that working 20 coast, and that economy, and those benefits 21 22 that we provide the rest of the nation. It's 23 tremendously important. 24 In terms of developing the plan, this is 25 the schematic for that. We mentioned the

coastal - the projects earlier. So we want to 1 identify what those projects are that sort of 2 form our universe of what we evaluate. 3 Those projects are evaluated through these predictive 4 5 models which are then, the output of which the predictive models are run through a planning 6 7 tool, which is really just a way for us to 8 organize those outputs and help us better 9 understand those outputs. Better understand 10 which projects might fit better together or which projects perhaps don't fit so well 11 12 together. And for those projects that do fit 13 well together, we can perform alternatives. We fit those projects together to a group of 14 15 projects together called alternatives that 16 then, again, is reevaluated through these models and ultimately run back through the 17 18 planning tool and results in the plan, which you see before you today. 19

So let's talk about the projects a little bit. There are two hundred nine, as Mr. Bradberry mentioned, that we evaluated. A hundred thirty-five of those are restoration projects, you can see them on the map here.

Fifty-four of those are non-structural

20

21

22

23

24

25

- 1 protection projects, you see those listed here.
- 2 Each of these when I talk about
- 3 non-structural projects, two things. Each of
- 4 these colored polygons represents a
- 5 non-structural protection project or an area,
- 6 so you can sort of use that term
- 7 interchangeably. And also, when I'm talking
- 8 about non-structural protection, what I'm
- 9 talking about is elevating homes,
- 10 flood-proofing of businesses, and acquisition,
- 11 voluntary acquisition of homes should, should
- 12 that be deemed necessary and appropriate in
- 13 some cases. And then twenty structural
- 14 protection projects were evaluated as well.
- 15 And these are things that we are more familiar
- 16 with. This would be like flood gates, levees,
- 17 flood walls, those kind of things.
- 18 So I'll talk a little bit about the
- 19 predictive models. And there's really sort of
- 20 two, two pieces to this. There's this top
- 21 piece here, which is the integrated compartment
- 22 model. But what we're really talking about
- 23 here is, is our ability to evaluate how a
- 24 project or group of projects affects things
- 25 | like how water moves along our coast; what the

1 salinity is of that water along our coast; what the vegetation looks like, does it change from 2 one type to another, does it die, does it 3 sprout; what happens to sediment; and also what 4 5 happens to our fish and wildlife resources as well. And then on the bottom half of this is 6 7 the, sort of, flood risk inside of things where 8 we're looking at how projects affect storm surges and waves and how that's translated to 9 10 this - to risk, to risk assessment, to, again, 11 what's really important to most of us, our 12 homes, our businesses, our communities. 13 all of this is being done over a range of environmental scenarios into the future. 14 15 we, as we try to predict the future and predict what these projects might do into the future, 16 we've got to have an idea of what the future 17 18 might look like without the projects on the So we don't pick just one potential 19 ground. 20 future, we pick several so that hopefully the projects that we end up selecting as part of 21 22 the Master Plan perform well within that range 23 of potential futures because we're not sure 24 which of those futures we're going to get. 25 And then moving into the planning tools,

1 there are really two key factors that affect whether a project is selected. It's how well 2 does it reduce risk and how well does it build 3 remaining land in the future. So those are the 4 5 two, sort of, key decision drivers we call, is what we call them. In terms of project 6 7 selection you see those listed up here in the 8 top, left-hand part of the slide. But we 9 talked about this notion of constraints and that, you know, this plan doesn't do everything 10 for everyone. It doesn't fulfill all the needs 11 that we want to fulfill for our coastal 12 13 citizens and that we think y'all deserve, quite frankly. And the reason is that we don't have 14 15 all the money that we think we need to have over the next fifty years, or we don't think 16 we'll have all the money that we'll need over 17 18 the next fifty years to do all those things. So funding is a key constraint, right? 19 20 the key constraint in most of our lives, and certainly a constraint in terms of how we put 21 22 this plan together and how we select projects. 23 There are also some real constraints related to 24 natural resources. Sediment, we don't have all 25 the sediment everywhere that we need.

1 Certainly Senator Chabert alluded to that in terms of the western part of Terrebonne Parish 2 versus the eastern part of Terrebonne Parish. 3 So it's a blessing and a curse depending on 4 5 where you are. So there's not enough of it in some places to do, again, all the projects that 6 7 we need. Fresh water, nutrients, and other 8 natural resources can be categorized there as 9 well.

10

23

24

25

But we know it's not just as simple as these two main decision drivers. Those are key, and they are very, very important. If you had to boil it down, you know, again, those are the key drivers. But there are these other things we call metrics listed over here. Community metrics and environmental metrics, these are just other things that we can measure in terms of, again, what a project or group of projects might deliver. And so we can ask ourselves, well, what does the plan do in terms of affecting traditional fishing communities, or what does it do for agricultural communities, or how does it affect the sustainability of land, or water fowl, or shrimp. And so these metrics allow us to look

at, again, a project outcome or a group of
projects outcome through the lenses of those
sort of specific, specific measurables, if you
will.

24

25

So that was the technical, science side of things. And, you know, it's good stuff. we also know it's not the end all, be all, it's not perfect, and it's certainly not the only answer to a lot of the questions that we have, or the solution to the problems that we have. We also do need to be responsive to our communities, and that's one of the reasons that we're here today, one of the reasons we have a draft plan ultimately leading to a final plan. So in terms of being responsive, I put this up, I mentioned that we had really an unprecedented, so far, kind of an unprecedented outreach and engagement effort. And I won't go through all these, don't worry. But this represents roughly a hundred and fifty opportunities for folks to talk to us about the plan, or us to talk to other people about the plan, and for folks to talk with each other about the plan. And not just the draft plan, but the process, and the real technical

1 nitty-gritty. We have some modeling webinars and some things along those lines, again, for 2 3 people to be able to plug into the process, plug into the plan development, and provide us 4 5 feedback along the way. This dates back roughly, you know, two and a half years or so. 6 One of the things I want to point out, 7 8 something that we are proud of is this, these community conversations that are listed over 9 10 here. We've had quite a few of those, actually. And these were different from this 11 12 kind of venue, these weren't a situation where 13 I'm standing up and giving a presentation and then we hear, you know, public comment, and 14 15 it's sort of a one-way dialogue. This was an opportunity where we were able to go into 16 communities, one of the ones where we had one 17 18 of the communities where we had one of these meetings was, in fact, in Dulac. Dinner was 19 20 served, we were able to work with some of our partners to help us organize and support the 21 dinner that was served. We were sitting around 22 enjoying dinner at the table and, you know, 23 24 break bread, and have discussions about coastal 25 issues and the plan. So it was a real good

way, I think, for us to interact. A real, much better transfer, I think, of information than some other potential venues. It is something I think you will see more and more of.

23

24

25

So we're going to get into the plan, the specifics of the plan. But before I do that I want to touch on some of the key decision points. So in terms of the overall funding amount, you know, we mentioned that the funding is a constraint. One thing I didn't mention on an earlier slide, and I should have, was the, the two hundred and nine projects that we evaluated as part of - potentially to be included as part of this plan represents roughly \$150 billion in work and projects. don't thing \$150 billion is a realistic amount of money to come to the state, but we do think that \$50 billion might be a reasonable amount, or a plausible amount. And so for that reason that dollar figure was selected. Again, constraints, project selection and constraints in developing the plan. And I mentioned already that we have moved some of those dollar amounts up earlier in the implementation period because we need work now, obviously. There's a

- 1 funding split associated with that \$50 billion.
- 2 It's 50/50 and that's not just an arbitrary
- 3 figure. We did look at spending additional
- 4 dollars over the \$25 billion in different
- 5 areas. It turns out that that 50/50 split, or
- 6 \$25 billion, is roughly the sweet spot in
- 7 getting the most bang for the, for the dollars
- 8 that you spend.

9

14

15

16

17

18

19

20

21

22

23

24

25

I mentioned scenarios and some sort of different futures earlier. And the approach that we've taken in developing this plan is, is really a plan for the worst and then sort of hope for the best situation. So we looked at - probably a better way to put that is looked at, sort of, a no regrets kind of analysis. And if you plan for, for a worst situation in the future, worst situation in the future and you actually experience something better, if you've planned for that worst scenario you're It's a conservative approach. in good shape. If you actually achieve a future that is not as bad as you might have thought it was, then the projects you put on the ground are probably going to perform pretty well. And so our analysis indicated that that was the case. So,

again, if you plan for that sort of worst case scenario and certainly are hoping for the best, in terms of near-term versus long-term benefits, obviously we know we need projects on the ground now, we need benefits now, we need to do good things now. But we also need to make sure that we're being responsible, that we're doing things that will last, you know, that will benefit both our children and our grandchildren into the future.

So let's get into the plan. This is it, this is the draft plan. And I hope you have a chance to look into it in a little more depth across the, the hall there or in the other room there. There are 120 projects in this plan, in the draft plan. They result in a net land change of about 802 square miles, so over and above what you would have if you didn't implement the plan, in fifty years. And we think we've reduced flood damages by about \$150 billion across the coast over that, over that fifty years.

So just a closer look at the projects in the western part of the state. You can see the project types listed here at the bottom. But

it's probably pretty hard for folks to read so, again, I hope you had a chance to look at it over there. These maps obviously are in the draft plan as well, so pick a copy of that up as well, please. But these green areas are marsh creation areas, excuse me, marsh creation areas. There's some non-structural, sort of, shaded areas you see listed here; hydrologic restoration, ridge restoration, some shoreline protection projects, and some structural protection projects are these sort of, these lines that you see on the map, on the map here.

So let's look at the central part of the coast right here. Of course we're getting over into the area of the Atchafalaya and the Mississippi Rivers and Bayou Lafourche. And so we're starting to bring in some of the freshwater and sediment diversion projects as part of the plan. We're also starting to pick up the barrier islands, of course, barrier shore islands in this neck of the woods. And then you see some of the projects out west, marsh creation, ridge restoration, and so forth.

And we'll look a little, again, a closer

look out east. And, again, the Mississippi
River obviously is in this part of the country
and so you're starting to see some of the
sediment diversions continue further on the
eastern side of the state over here.

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

In terms of non-structural projects, these are those that were selected. So, again, each of these polygons represents a project, a non-structural project. There are roughly 26,000 structures that have been identified coast-wide, and the dollar figure associated with the potential mitigations for those structures which, again, are elevations, flood-proofing, or voluntary acquisitions, there's a little over \$6 billion. You know, I said this earlier and I'll say it again, this is a very, very rough estimate, 26,000 acres is a very high level for the planning to attach a dollar figure to this. There's not a list of addresses anywhere associated with that number. Certainly the first call we would make is, you know, if we were going to implement one of these projects would be to President Dove or one of the local, you know, communities here. You folks certainly have been dealing with

these issues in much greater detail and for a
longer period of time than we have. And
frankly we thing you're better at it, and you
know more about it, and we want to certainly
leverage that expertise and that mileage before
we would ever so any of these things. So I
wanted to mention that.

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

In terms of breakdown of projects, in terms of dollar figures. Again, you can see the 50/50 split listed here. Restoration projects are over here on the left-hand side of the screen, structural and non-structural over here. You know, I just mentioned one of the things that we hear sometimes is, you need to spend more money on dredging, you need to spend more money on dredging. That's, you know, for benefits of some of the other projects, sediment diversions and others. And, you know, if you add up the dollar figures associated with dredging in this plan, again, it's the single barge expenditure identified as part of the plan.

So we're going to look through a few series of slides that, that are going to actually put where we are going to predict the

plan will deliver on the landscape. So we've already looked at the red maps in terms of what the future might hold in terms of land loss and this is what you're looking at again here. this is at year thirty, a future without action. An easy way to keep track if we're talking about no action or a map with the plan in action is this, you'll see a green check if it's a plan, a future with action. So this is land loss, again, at year thirty without implementing the plan. And this is what the landscape might look like with the green plan of land sustained on it as a result of implementing the plan at year thirty.

We'll look at it at year fifty. Again, this is without the plan. Then at year fifty with the plan. Again, you start to see some of the green, the two greens that's land gained or land sustained. The take on that is that is land sustained that you otherwise would not have but for implementation of the Master Plan.

So in terms of numbers, what does that deliver? Well, at year fifty we have roughly 802 square miles of coastal land that we wouldn't have otherwise, again, as a result of

implementing the plan.

1

So how does that translate to flood 2 depths? We talked a little bit about that and 3 how it is certainly so important to our 4 5 communities. Again, we'll look at some future without action slides, some future with action 6 7 slides, then I'm going to show you a different slide which will be a difference between those 8 9 two maps. So this is at year twenty-five for a hundred-year event, which is a hurricane that 10 has a one percent chance of occurring in any 11 12 given year. This is without action, these are 13 flood depths of with action. And I should point out that the sort of blue color is one to 14 15 three feet and it ranges up to over fifteen feet, which is this sort of purplish color. 16 let me just go back. This is without action, 17 18 year twenty-five. This is with action, year twenty-five. And then that's the difference. 19 And so in terms of differences, what does that 20 mean? Well, the greens and the blues are 21 22 reduced flood depths as a result of 23 implementing the plan. And so potentially 24 these greens and blues are good numbers, 25 they're good numbers, I mean, the flood depths

are reduced in those areas.

In year fifty we'll look at the same thing. So this is without action for the hundred year event, and then with action for the hundred year event at year fifty. And then I'll show the difference map again.

so in terms of, again, raw numbers, I mentioned that 802 square miles of land. At year fifty we think we can reduce expected annual damages by a little over \$8 billion.

It's important to note that's an annual number so that's that at year fifty number. And I mentioned \$150 billion earlier. So if you sort of add those, reduce the ADs up over the fifty year period of the Master Plan, we believe you could reduce those damages by roughly \$150 billion, roughly a 3:1 return of investment n just economic damages.

So what does the plan deliver, what does all this mean? Well, we do a few things. We provide a lot of projects. There are 120 projects as part of this draft plan, seventy-six of those are restoration. There are twelve structural and thirty-two non-structural protection projects. We do have

benefits to the ecosystem. I didn't mention it 1 in great detail, but generally speaking in 2 terms of fish and wildlife we're better off 3 with the plan at fifty years than we are 4 5 without, without the plan at fifty years. we, we can reduce risks. I mentioned that, in 6 7 terms of \$8.3 billion at year fifty. We're 8 building new land to the tune of 800 or so 9 square miles that I mentioned. If you look at some other future scenarios, 1,200 square miles 10 depending on what future we might have. 11 12 give ourselves times to prepare and adapt to 13 some of these changes. So certainly recognize that, that some of the red maps and even some 14 15 of the maps with the green on it are pretty stark, and their startling to a lot of us. 16

And, you know, the good news is we can do,
I think, a lot of good for a lot of people for
a long time. And again, related to the risk
reductions and land building benefits that we
have. And the other thing is that we've got
some time to adjust to these things, if these
predictions are going to come into fruition.
And we also have time to determine whether or
not they are coming into fruition, right? So

17

18

19

20

21

22

23

24

25

as we update the plan every five years we are
able to look at the predictions that were made
and look at the trends and what's actually
happening on the ground and determine whether
or not we think those predictions were valid or
not. And we're able to adjust to those as we
move forward.

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And lastly, I'll mention briefly, we are providing some economic development opportunities. So certainly a healthy, resilient coast feeds a healthy, resilient economy across our coast, that is certainly important to us. But, you know, another thing that we're doing and you should be really proud of in Louisiana, is we're really at the tip of the spear in terms of dealing with these issues. We're leading the way, we're dealing with these because we've have subsidence and land loss occurring for so long. We've been dealing with these things for a number of years now and we've gotten better at doing it, and we're really leading the charge in terms of developing this sort of planning approach and look at adapting to those changes. You know, if the predictions that are laid out in this

Master Plan, you know, come true, many parts of the country, Miami, New York, San Francisco, and others are going to be dealing with some of these same issues. And we're going to have a leg up on them because we've already started doing it, and that's an exportable commodity that we can, you know, be proud of, and something that can help all of our economies as

well.

so in terms of getting more information about the Master Plan, I hope it was clear from, from the room over there. But in case it's not, you can get more than you ever wanted to know about the Master Plan at coastal.la.gov. Each of these represents a link to either the main document, a flier, and appendix, or a technical report related to every - again, everything you want to know from what happens to juvenile brown shrimp or white shrimp to, again, the overall plan itself. So please take a look at our website if you're interested in getting more in depth information related to any of this.

One of the things we've done for 2017 is develop the parish fact sheets. So if you're

just interested in what's happening in 1 Terrebonne Parish you can go to that fact 2 3 sheet, you can get sort of our stats for Terrebonne Parish, or Lafourche Parish, or any 4 5 other parish for that matter, both in terms of what the future might hold without action and 6 7 then what's in the plan for your parish and 8 what impact those projects that are in the plan for your parish might have on your parish. 9 have similar fact sheets for, for projects. 10 Each project has a fact sheet that is very 11 12 similar to what I just described for the parish 13 fact sheets. We have a Master Plan data viewer that I hope you have an opportunity - had an 14 15 opportunity to take a look at again tonight. 16 But if not, this is a fantastic tool. 17 available, again, at our website. You can go 18 an type in your address and look at how this plan might affect your flood risk for, you 19 20 know, now or in the future, for example. encourage you to go take a look at that, it's 21 22 very informative. 23 In terms of where we're headed, the ground 24 plan was released a few - a couple of weeks

ago on January third. We are in the midst of

25

1 the public hearings here, obviously tonight is the twenty-fourth. March twenty-sixth, the 2 official public comment period will end, so 3 you've got a good bit of time left before that, 4 5 before that ends. And the April nineteenth is, Senator Chabert mentioned, we will be 6 7 presenting a final plan that will be formed by 8 your comments, not only comments that we hear 9 tonight but the written comments that we receive. We have e-mail, and online, and 10 written, and regular mail as well. We'll 11 12 present that to the board on the nineteenth. 13 Hopefully with the final plan being submitted to the legislature on April twenty-fifth of 14 15 this year. 16 Most of these are behind us now that we're 17 a good way through to the twenty-fourth but we 18 will have one more meeting, it will be in Mandeville tomorrow night. It will be the same 19 20 format, same information that you've seen here tonight. But if you know folks who want to 21 22 travel from here to there, they're certainly

welcome. Or if you know folks from that area

that need to be at a meeting like this, please

let them know. We'll be happy to have them.

23

24

25

So I'm going to end it there and we're going to move in to the formal public comment period. I'm going to let Nick handle that. I appreciate your attention and we'll be here this evening for as long as we need to, to answer questions after all this is all over with. Thank you.

MR. SPEYRER:

Thank you, Bren. What we're going to do right now is we're going go ahead and we're going to move the table, and I'll be joined here in the front by not just Chairman Bradberry, but also by Bren Haase, by Chip Klein in the governor's office, and Michael Ellis, Executive Director. And we're working to make sure both microphones are working. If you haven't already completed a form and you would like to speak tonight, please raise your hand. Zach, walking down the middle, can get you a form. You can turn it in and then we'll call your name up.

Here is essentially how it is going to work. We've got, you know, upwards of twenty-five or thirty folks that have already completed cards that would like to speak

tonight, which is fantastic. And we're, we're 1 here all night. But we will ask you to please 2 respect a time limit that we are going to put 3 in, we're going to ask that you speak for three 4 5 minutes. And the way the process is going to work and - if I could have everybody's 6 7 attention, please. A couple things that are 8 important to remember is, you've got multiple 9 ways to provide public comment. You can speak 10 here tonight, for which we've got - can I have your attention, please. There's multiple ways 11 12 to provide public comment and we want you to 13 understand, each of these avenues is equally important and the comments provided will all be 14 15 weighed equally. So you've got the opportunity 16 to come speak at the mic within three minutes, 17 you've got the opportunity to go online and 18 submit through an online form at coastal.la.gov, you can also send us an e-mail, 19 and you can still handwrite us a note as well. 20 All of those forms will be captured and will be 21 22 published in the final Master Plan appendix. 23 So all these public comments we receive through 24 all these avenues will be provided that way. 25 Can y'all hear me pretty good in the back

with this one? Okay. All right. So we've got 1 the quite a few comment forms that have been 2 turned in, I'm going to call them in the order 3 in which it was received. There's a couple 4 5 things that I would like to say - a couple of things that I would like to say. If you have 6 7 your form and it's completed make sure you pass 8 it back in, when we get it we'll put it in our 9 stack. We want to get to everybody that's been 10 here with us all night. We want to start our public comment period now. When you come up to 11 12 the mic please state your name and if you're 13 representing an organization please say the organization. And then we'll be keeping time 14 15 up here and let you know when you're at a 16 two-minute warning, a one-minute warning, and 17 then when your time is up. We're going to 18 start with Representative Jerome Zeringue. 19 Representative Zeringue, come up. And while 20 you're coming up, I would like to recognize 21 Representative Tanner Magee who did show up 22 here a little later on during the presentation. 23 We appreciate your being here, Representative 24 And we would like to thank Simone Maloz Magee. 25 with Restore or Retreat for all the gifts and

- 1 goodies that the organization was able to
- 2 provide all of us here. Following
- 3 Representative Zeringue will be Mr. Donald
- 4 Lirette, he's been here a long time. Mr.
- 5 Donald, you'll be next.
- 6 MR. ZERINGUE:
- 7 Thank you, Nick. And it was Simone's
- 8 birthday on Friday, by the way. Mr. Bradberry
- 9 and members of the CPRA, again, having
- 10 participated in the process I have a deep
- 11 appreciation for the work and the science and
- 12 engineering that was involved. And thank you
- all for putting this together and coming here
- 14 tonight, and thank you public for the
- 15 participation. A couple things I want to touch
- 16 on, I don't want to repeat, I'll be brief and
- 17 I'll provide written comments. But there's a
- 18 few things in the plan, obviously, that are
- 19 important and as Secretary Bradberry indicated,
- 20 it's important that you all get up here and
- 21 make comments because I can assure you when the
- 22 2012 Master Plan was completed, it changed from
- 23 the draft process to when the public comments
- 24 were heard. So I, it just doesn't fall of
- 25 deaf ears, so it's important that you get up

and make comments.

1

A few things, obviously the Houma 2 navigation channel - flood gate, lock complex 3 is important and we encourage you to - we 4 5 would encourage you guys to expedite that as much as possible from the flood protection 6 7 aspect but also the environmental aspect. 8 Considering that Atchafalaya is going to be a 9 critical component in terms of addressing marsh creation and sustain that marsh. 10 In looking at the marsh creation project, and I don't know if 11 it's possible, but it might be helpful if we 12 13 had the region up on the screen. I don't know, but - you don't have to do it now. But, oh, 14 15 it blinds you? That might be good, you won't 16 have to see us. But at least one of the things in terms of the marsh creation when you're 17 18 looking at it, I think important aspects to consider in terms of the earliest marsh 19 creation when - which is in the near-term 20 category is eleven to twelve years off. And 21 part of that creation, I think, is going to be 22 utilizing the Atchafalaya, but the sediment 23 24 source hasn't been identified. And that's why 25 I would encourage you all - and the parish

president indicated the sediment pipeline project. Not only would it be important in terms of providing that capability to build the wetlands, similar to the long distance sediment pipeline, we believe you could do it cheaper, you could do it quicker. And the sediment source is in the plan although they haven't been identified. The good thing about the sediment pipeline project in the Atchafalaya, keeping with the intent of the Master Plan, taking sediment from outside the system and bringing it in.

The pipeline would also be important in trying to get sediment to the eastern portion of the parish. You're going to hear from everyone else how critical it is. And that bay rim function is going to be important. We need to establish and try to reintroduce - I know it was in the 2012 plan, putting in the bay rim function on Lake Barre. Because if you don't have anything, you've seen here the unfortunate reality of a without project.' We are going to do one of two things, either you are going to establish a rim along Lake Barre or just start armoring the Morganza to the gulf system

1 right now. Just, as Gordy would say, put rocks all over it. Because the unfortunate reality 2 is that is going to be the last line in the 3 sand and we don't need it to be. And I think 4 5 there are opportunities if we start now to establish that rim and then use the pipeline to 6 7 provide sediment to restore and maintain those 8 projects. I think it will be critical in 9 establishing that marsh. I have a few more comments, I think, on the Annual Plan and I'll 10 submit some written ones, but I'll keep it 11

within my three minutes. And thank you all for

14 MR. SPEYRER:

coming.

12

13

19

20

21

22

23

24

25

Thank you, Representative Zeringue.

Donald Lirette, you're next. Ms. Suzanne

Carlos, if you're still here, you'll be next.

MR. LIRETTE:

I want to thank y'all for coming to Houma.

I want to take y'all back in time because I've been involved in coastal restoration from the beginning. I'm originally from Dulac and over the years I've, I've had my hands in just about everything from the (inaudible) to the creation of the Coalition to Restore Coastal Louisiana

which I chaired for three terms. We were the catalyst that got the whole coastal restoration movement going. Back in those days we had to look at reality, dollars, what could be done for the few dollars that we had. I understand today we got money burning holes in our pockets. So maybe we should look and rethink what our desires and our wishes were back then.

One of the things that I have experienced back then was an idea from a brilliant scientist, a good friend of mine, Dr. Shay Pinlon from New Orleans, from UNO, about slurring sand from Ship Shoal, which is a sediment source, inside the barrier island which would change the dynamics of coastal restoration. It sounded like a good idea but the other restraint that held us back was money. We were hoping within twenty-five years to have \$1 billion to restore coastal Louisiana.

A lot of the small projects we're doing today wouldn't have to be done if we displaced water volume inside the barrier islands and build land mass. Engineer Bob Jones of Terrebonne Parish made the remark to me when I

was chairing the coalition that if we slowed
the tidal prism we would be most effective.

When the Corps held its meeting here several
years later I got up to the microphone and
said, "Okay. What we can afford and what
Terrebonne Parish wants is barrier islands,

Terrebonne Parish wants is barrier islands,

barrier islands, and barrier islands," because
in practicality that's what we could afford.

Today, now that we got money burning holes in our pocket, I think we should look back at it and say, "Why don't we have the courage to change the dynamics inside the barrier islands and build land mass?" Then we might not have to do all these small projects. So it's something to consider.

The last point that I wanted to make was local employment. You have people on the bayous that's losing their culture because they're having to move away. They're losing jobs because of erosion. I don't see anything in the Master Plan that promotes a percentage of local employment put into the Master Plan.

And then, of course, I'm going to leave a legacy behind. I told my grandchildren that when I go I hope that they don't have to buoy

- off my property to remember where it was. I've
- been flooded six times and it's not a good
- 3 feeling.
- I thank y'all. I'm going to submit this
- 5 in written comments and give y'all some more of
- 6 my ideas. But I wanted to share that with
- 7 everybody tonight that in Terrebonne Parish I
- 8 don't think it's just barrier islands, barrier
- 9 islands, barrier islands anymore. I think it's
- 10 let's get the water out and rebuild some land
- 11 mass. Thank y'all.
- 12 MR. SPEYRER:
- 13 Thank you. Suzanne Carlos, are you here?
- 14 Up next will be Herdis, or Hendis, Neil.
- 15 MS. CARLOS:
- 16 Good evening, thank you. One of our most
- 17 significant and urgent issues facing our state,
- 18 as we all know here, is the loss of our coast.
- 19 Louisiana's land loss crisis requires a
- 20 comprehensive suite of restoration projects
- 21 including barrier islands, marsh creation,
- 22 hydrologic restoration, ridge restoration,
- 23 shoreline protection, and oyster reef
- 24 restoration.
- 25 I ask the State to focus funding on large

scale restoration projects first so there's a greater impact over time and to support investments made in our other restoration and risk reduction projects. I support the continued restoration and maintenance of barrier islands and headland. This is an important component of our coastal restoration and should be prioritized and funded. addition to the revenue coming to the state over the next fifteen years from the BP settlement, the people of Louisiana and its leaders must develop additional and reliable revenue streams to fund the entire Master Plan.

To secure the stable future for coastal Louisiana I support the use of the land building power of the Mississippi and the Atchafalaya Rivers to the greatest extent possible. And finally, I urge the State to take advantage of the incredible economic and job creation opportunities that would be available with the advancement of the Master Plan. Recent analysis has shown the water management sector is the fastest growing job sector in Louisiana's coastal zone with an average salary of almost \$70,000.00. Over the

- 1 next ten years nearly 60,000 jobs could be
- 2 supported by investments in restoration, jobs
- 3 that are sorely needed.
- 4 So I thank you for the past work in the
- 5 Terrebonne and the Barataria Basins and I thank
- 6 you for the expanded outreach for the 2017
- 7 Master Plan.
- 8 MR. SPEYRER:
- 9 Could you state your name and organization
- 10 real fast?
- 11 MS. CARLOS:
- 12 Suzanne Carlos, and I'm a resident of
- 13 Houma, Terrebonne Parish.
- 14 MR. SPEYRER:
- 15 Thank you, Suzanne.
- 16 MS. CARLOS:
- 17 Thank you.
- 18 MR. SPEYRER:
- 19 Herdis Neil. And then up next will be
- 20 Warren Coco.
- 21 MR. NEIL:
- 22 Thank you, guys, for giving us this
- 23 opportunity to speak in regard to our coastal
- 24 restoration problems. I haven't changed my, I
- 25 haven't changed my stand on first line of

I heard it so far three times 1 defense. tonight, the meeting I attended maybe twelve, 2 thirteen years ago, eighty to ninety percent of 3 the public spoke about repairing our barrier 4 5 islands, restoring our barrier islands. look at the maps that we've been looking at 6 7 today you can see where the pass is, one island 8 is completely gone, eight miles wide.

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

You're going to spend \$112, \$113 million on the barrier island and I'm opposed to it. Not that the barrier islands shouldn't be maintained, I see no sense in it. It's like I'm a cattle producer, okay? It's like, I'm going to put this fence right here, brand new, put some steel posts, nothing that an elephant can't go through it, but all the other three sides are wide open. We're going to spend money, we spent money on Raccoon Island, we spent money on Wine Island, I even did one of the plantings there. I'm a wetland plant producer and I'm a cattleman. And the money that we spent - I mean, I make a lot of money planting grass. I wish I would never have to plant another grass in my life, that means we solved our problem. And until we solve the

salt water intrusion we're not going to solve our problem.

We could recreate marsh in the Lake Barre rim, Terrebonne Bay rim - and I spoke about this the last time it was first mentioned to U.S. Marine Fishery, Wildlife and Fisheries, or one of the Fisheries was going to be the owner of this thing. We were going to create, at that time it was 435 acres, based on money I guess we can't - we can only do so much. But we don't solve the problem. We could build these marshes with the plants like I'm doing every year, year in year out, and I do ninety percent of all the districts in the state of Louisiana with plants. Ten years later that's all gone because we haven't solved the problem that made the plants disappear to start with.

And I made the analogy earlier in the day.

It's like changing the carpet in the house but

we don't have a roof and it rains every week.

We're doing the same things with our coastal

protection projects. We're creating more,

newer, and advanced technology to figure out

where we're losing the most land but we're not

solving the problem of why we're losing the

1 most land. We're losing the most land in the Barataria Bay because Wine Island is gone, 2 eight miles wide. You could put all the money 3 you want on the Whiskey Island, Wine Island, 4 Timbalier Island - I mean, excuse me, not Wine 5 Island - all these other islands with an eight 6 7 mile gap in between. It's like, kind of like 8 we did with the (inaudible), it really has 9 nothing to connect to it that say that we 10 actually have started protecting Terrebonne Parish. I don't think our levees are completed 11 12 and we spent a lot of money putting the gate 13 That's like myself in the cattle business, in. it's like, go put a brand new gate, a real nice 14 15 gate, but I have no fence. And that's how I 16 see what we've been doing with what the levee did. 17

I don't mean to be critical of the people in charge. We can only spend so much money but if we save enough money on these island projects, put that money to the barrier island restoration fund that Mr. Gordy Dove created many years ago. And when we got enough money let's go rebuild Wine Island. We put rocks around these other islands and still what's

18

19

20

21

22

23

24

25

happening to those islands now with rocks? 1 don't know what the cost is going to be. I 2 know it's going to cost us a lot to grab sand. 3 But we could do some maintenance projects on 4 5 these barrier islands, creating new marsh which is what the plan calls for, and I might even 6 7 get the job to go plant the grass. I don't 8 really want it, I would rather we save that 9 money and rebuild, rebuild Wine Island and 10 narrow the passes.

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So many engineers in Lafayette tell me, "Herdis, we got so much water here, if we close the passes how are we going to get the water out?" Well, guess what. If you don't open the water in your faucet you ain't going to get none in your bathtub. You know? If we close these passes, narrow these passes with rock, both ends, east and west of all the passes across south Louisiana; and the reason the island is built there is that's a formation 1,500 feet down of rock and shale. I've been in the oil field for twenty-eight years, we need to do some geological work to find out where across the state of Louisiana we can actually build the land that can sustain the

- weight of the top of the levee we need to protect Louisiana.
- All right. That's all I have to say. And our biggest enemy has been the Corps of
 Engineers since they dammed off the river and did not do a comprehensive barrier restoration or maintenance project. This is on the federal government, now we're taxing ourselves to repair it.
- 10 MR. SPEYRER:
- 11 Thank you, Mr. Herdis. Warren Coco 12 followed by Steven Rockweiler.
- 13 MR. COCO:

25

Louisiana.

- My name is Warren Coco, I'm the founder 14 and owner of Godell Manufacturers. 15 16 sixty-two years old and have been an avid water fowl hunter for almost fifty years. All my 17 18 days of duck hunting started up towards 19 Manchac, then moved on to Pass A Loutre, then went on to Hackberry, Louisiana and to the 20 21 Maurepas Swamp. And that played out through the (inaudible) vegetation, I was fortunate 22 23 enough to buy about 1,600 acres of marsh in 24 Cameron Parish, southwest of Hackberry,

I've also been blessed with the opportunity to purchase interest in a 2,200 acre cotton and soy bean farm located on the Red and Black Rivers in Catahoula Parish. I manage both of these properties for water fowl.

I've been hunting and fishing on the coast of Louisiana for forty-four years and I've seen firsthand the loss from the coastal erosion.

One of my best acquisition spots is now 300 yards in the Gulf of Mexico. In my travels across the coast I got to meet a lot of old-timers and heard the stories of hunting and fishing years ago. One comment made after Hurricane Betsy to me by the manager of the Pass A Loutre Wildlife, Pass A Loutre WMA, is that the only way we are going to save this land is to dynamite the passes. This is now being done and they are called diversions.

I can remember when Christmas trees was being collected and placed between fences to try to build settlements. This process has pretty much been abandoned now that terraces were being constructed. Diversion, terraces, and pumping (inaudible) is the only way we are going to save what we have left. Saving the

coast of Louisiana is going to be a very 1 expensive process, I know this firsthand. 2 done wetlands restoration process for my 3 property in Hackberry to restore the high 4 5 (inaudible) as it used to be before the slip channels were dug on the Sabine and Calcasieu. 6 7 I purchased a marsh bug yesterday to do this project. I built two and a half miles of 8 9 terrace and levees, I am in the process of building a protection levee two miles long 10 (inaudible) they planted grass on all of it. 11 12 I have applied - I have not applied for 13 any federal or state funding for this project. I paid the entire bill out of my pocket. 14 15 when they want to donate structures on my 16

when they want to donate structures on my property or when conservation needs to go on my property in Cameron with Ducks Unlimited and the (inaudible) Trust. Ducks Unlimited received for \$480,000.00 (inaudible) for projects. Ducks Unlimited has now applied for (inaudible) for the work I'm currently doing for \$594,000.00 which will be spent on wetland projects. I am proud to be a part of the coast

17

18

19

20

21

22

23

24

25

One thing that really upsets me is the

and also to generate funds to do more.

people who cry about money being spent on the rich man's property. They need to understand most of the wetlands in the state are private ownership and the landowner's pay taxes on it. I'm going to put a few (inaudible) and retire from the Louisiana Department of Wildlife and work for Ducks Unlimited on a landowner project who is now retired. He said, "Show the poor man with some property with a project and we'll be happy to do one on his property."

When I was out this morning I seen different people objecting to these diversions because the fresh water would change the their fishing. These are probably the same people that are fishing where their grandfathers once trapped twenty-five years ago. I made a statement that I could fix the coast of Louisiana, give me the keys to the big monster, the Army Corps of Engineers. I'll make the Mississippi River flow west of Texas but you have to tell all the government interests to go you know where.

The process now proposed in the Master

Plan is going to negatively affect some people.

You can never make anyone happy, they need to

1 look at the whole big picture the greater good

2 of the wetlands. I totally support the Master

Plan as proposed with all its projects, none of

4 these projects will directly affect my property

5 but over the long-term it will protect my

6 property and the properties around me. I feel

7 every sportsman needs to get behind this Master

Plan and also support the organizations such as

9 Ducks Unlimited, (inaudible) Paradise, and

10 other organizations that are dedicated to

11 preserving our wetlands. Thank you for giving

12 me the opportunity to express my thoughts on

13 this plan.

3

8

14 MR. SPEYRER:

15 Thank you, Warren. Next to speak is

16 Steven Rockweiler followed by Reggie Dupre.

17 I'm going to say it again, we don't want to be

18 in the business of shutting the door on

19 anybody, we really want to hear from you today.

20 But we also want to be respectful of everybody

21 that, that's here as well. So keep an eye to

22 my left, your right, and we'll keep you posted

23 with where we are with our time limit.

24 MR. ROCKWEILER:

25

I'll try to be three minutes. Some very

good information from these two gentlemen here 1 on the passes and the changing the prism of the 2 tidal flow problem. I've been fishing since I 3 was a kid in both Barataria and Terrebonne 4 5 systems, and it's very true. My name is Steve Rockweiler and I, I live in Luling, Louisiana 6 7 and I've hunted, fished, and crabbed in the 8 northern regions of that Barataria Bay system 9 all my life. I now, with a group called 10 Louisiana Sportsman's Coalition, we're a group of 7,000 members. And we have just partnered 11 12 maybe two weeks ago, with a Louisiana fishing 13 group who has a Louisiana fishing blog on Facebook, and they have 47,000 members. 14 15 we're fixing to partner up with two other large 16 sportsman's groups.

We are very concerned about our ability to access the Sportsman's Paradise, not only for ourselves but for our children, our grandchildren, and after them. Eighty percent of our coastal marshes are now privately owned. There are small land owners in there but most of them are major oil companies and land companies. We have an issue in this state that the other forty-nine states don't have, and

17

18

19

20

21

22

23

24

25

that is water access. The public trust states that no matter who buys, sells, or owns these marshlands, that the public trust is always kept. In other words the public has the right to access the waterways, I'm not talking about the land.

We are against - we're not against private ownership of coastal areas or their rights. But we also feel we have rights. When you brought up heritage, we're losing that heritage because we're being locked out of the marsh and it's gotten bad in the last two years. People are calling us, shrimpers and crabbers are telling us they're being asked to give ten, fifteen thousand to go shrimping and crabbing in bays that they did for generations.

Now, I'm old enough to have witnesses a lot of what's going on. I graduated in 1971, I went on a drilling rig for a year and we went in canals, came out of canals, went in with the drilling rig. And I saw the process of a lot of our problems. We, we just can't see spending \$50 billion of taxpayer funds on eighty percent - or most of the projects on private properties when we are being told we

1 can't access it, the waterways.

We, we just, we have a lot of different 2 groups coming to us now that are having 3 trouble. And two of the parishes where they're 4 5 having a lot of trouble is Lafourche and Terrebonne. They've been arrested, they've 6 7 been threatened, even with weapons. We had two 8 gentlemen the spoke with legislators recently 9 who came from out of state, one of them from 10 Missouri, that went through a big outfitter's group that's trying to funnel people into here 11 for hunting and fishing trips, and they're 12 13 being - one of them was threatened and he wrote a letter to the legislator. 14

So we've just got to look at this and try to come up with something with the big stakeholders because they're creating a lot of issues with a lot of our members and, like I said, as we grow then we're going to have to look at other avenues. Thank you.

MR. SPEYRER:

15

16

17

18

19

20

21

22

23

25

Thank you. Senator Reggie Dupre followed by Mark Black. Senator Dupre.

24 SENATOR DUPRE:

Thank you. Reggie Dupre, Executive

District. Before beginning, Parish President

Dove was so nervous he forgot to mention his

council members that were here, Mr. Al Marmande

and Steve Trosclair. And I want to introduce

my commissioners. Of the nine commissioners I

have three of them here, Board President Tony

Director of Terrebonne Levee and Conservation

Alford, Jack Moore, and Danny Walker's all here. So three of my nine commissioners are here.

I'm very proud of what our team here tonight, for multiple reasons, very proud of the work I've seen as the, you know, this is the third Master Plan. The lead author of the bill that started CPRA back in the wake of Hurricane Katrina, we've seen great things in the State of Louisiana. I want to thank all of you at CPRA for your hard work and dedication in moving the state forward.

I'm very - I'm also proud of the people of south central Louisiana to have this kind of crowd here tonight. Twenty-five years ago you could have had this meeting in a broom closet and you wouldn't have had to move the broom and the mop out of the way. There wasn't that much

interest in these issues many years ago. But it has now grown as a matter of survival for us.

I'm very, very pleased that the state has been our partner on building, without federal appropriations, the federal

Morganza-to-the-Gulf Hurricane Protection

System. Today, as Parish President Dove said, we move forward on the next big flood gate project together with the state and the parish helping to put up some CDBG dollars. That's going to mean close to \$400 million of improvements, close to \$400 million of improvements along, along this levee alignment that's going to be done with zero federal appropriations.

Herdis, I have to respectfully disagree with one of the things you said. We did not build above the Dell floodgate and not connect levees. As of the summer, as of the 2017 hurricane season, thirty-five miles of levee and flood gates will be connected between Bayou Point au Chene and Bayou Dularge. We are now moving further east in Lafourche Parish and further west with the beginning of the

- (inaudible) Canal floodgate. So I'm hoping by
 the time I retire that we will have at least
 about sixty miles of this system that will be
 to some level of protection.
- 5 There's only, the only little bit of sadness I have on this, on this Master Plan is 6 7 there needs to be multiple lines of defense as 8 Senator Chabert, Parish President Dove, Jerome 9 Zeringue stated, Representative Jerome Zeringue. I'm a native of Pont Chene. 10 So it's a little bit ironic that the creator of CPRA's 11 12 home area, Pont Chene, Montague area, is going to be sacrificed. It will be sacrificed 13 because of not having an extra line of defense 14 15 whether it be the rim around Lake Barre and Lake Felicity area or the twin pipelines right 16 there. There has to be another line of defense 17 18 between the barrier islands and the Morganza line. Because, like Jerome said, if not we 19 better look like building a huge flood wall in 20 that area. Thank you very much. 21
- 22 MR. SPEYRER:
- 23 Thank you, Representative. Mark Black 24 followed by Ms. Jane Arnett.
- 25 MR. BLACK:

1 Thank you, Nick, Johnny, Mr. Chairman, Mike, Bren. First, I want to recognize the 2 3 people who have come down every year, different students each time, but nevertheless the 4 5 University of Buffalo, to help us with a very small, very inexpensive little coastal 6 7 restoration project we've been working on for a 8 number of years and it has had some effect. 9 Those students are here tonight, they're from the University of Buffalo, and I would like 10 them to stand. Would y'all stand, please? A 11 great group of kids, and I think this is very 12 educational for them to learn about our 13 problems here in Louisiana. They don't have 14 15 the same problems in, in New York where they're 16 from, but nevertheless they are very interested. 17 18

I want to echo Senator Dupre's comments.

I appreciate the work that you put in to the,

to the Master Plan, there's no doubt about

that. I was part of the framework development

team sort of near the end. I know there's a

lot of effort that went into it and we've

mentioned this numerous times. That first line

of defense for eastern Terrebonne Parish is

19

20

21

22

23

24

25

- 1 critical if we do not have that lake rim, land
- 2 bridge, whatever you want to call it, those
- 3 restored barrier islands, Reggie is going to
- 4 have to armor the hell out of ridge J2 because
- 5 in a very short period of time it will be
- 6 twenty-five miles of open water between what's
- 7 left of Timbalier and that levee. So please,
- 8 let's try to figure out what we can do in
- 9 eastern Terrebonne Parish. That is the most
- 10 critical area in the parish right now. It's in
- 11 danger of being lost. Thank you very much.
- 12 MR. SPEYRER:
- 13 Thank you, Mark. Miss Jane. Simone Maloz
- 14 you're next.
- 15 MS. ARNETT:
- Jane Arnett. I'm the Executive Director
- 17 of South Central Industrial Association. We
- 18 are a group of 250 businesses located in the
- 19 tri-parish area of Terrebonne, Lafourche, and
- 20 St. Mary Parishes. We represent the 250
- 21 companies that are engaged in the Gulf of
- 22 Mexico and all around the world. Our primary
- 23 focus is the oil, gas, and marine industries of
- 24 this area.
- 25 From a coastal protection aspect of this

- 1 plan, we support Terrebonne, Lafourche, and St.
- 2 Mary's efforts. With the founder of the CPRA
- in our back yard, Reggie; and the ruler of the
- 4 coastal issues, Windell Curole; the experience
- of Jerome Zeringue, we believe they got it and
- 6 we support their efforts tremendously.
- 7 So I'm going to focus in quickly on
- 8 another aspect that the SCIA is particularly
- 9 interested in. Over the next ten years nearly
- 10 60,000 jobs will be supported by investment
- 11 through restoration. One of the things that we
- 12 encourage is that you use local people to do
- 13 these jobs, it is critical. We have major
- 14 community colleges all around the coast that
- 15 are ready and willing to train our workforce.
- 16 | SCIA is committed to workforce and hopefully we
- 17 will look at our local people in supplying
- 18 these jobs. And we're talking about these
- 19 coastal jobs with a good salary of about
- 20 \$70,000.00 per job, and we encourage that.
- 21 SCIA provides, and it takes pride in our
- 22 efforts with workforce development, in
- 23 enhancing the economic benefit for our area.
- 24 MR. SPEYRER:
- 25 Thank you, Jane. Simone, then Ted

1 Falgout.

MS. MALOZ:

Thank you. Good evening. Y'all did forget my birthday so thank you very much. So I'm going to focus on a couple of things that haven't been covered tonight. We will submit detailed written comments, and we do agree with many, many of the that was, or that was already said here tonight by the speakers before us, and I'm sure after us. But we want to focus on a couple of things.

You know, we want to thank you for the work that's already been done here. Certainly Caminada is a source of pride for us. As an NGO we love to take people to a project and they can see it in front of them. And, of course, it has valuable protection to Port Fourchon and the people of Lafourche. Bayou Lafourche also provides drinking water to hundreds of thousands of residents. Again, we want to thank you for the projects already on the ground.

We were not involved, as involved, in the previous Master Plans and so I want to thank you again today. I know that it is often a

- 1 thankless job. I appreciate the tough
- 2 decisions that you have to make with the
- 3 limited time, money, resources. And I have a
- 4 new appreciation for the process and the
- 5 thousands of hours, and e-mails, and phone
- 6 calls that have been put into this process.
- 7 And it's, it's kind of funny it comes down to
- 8 meetings like this. And Bren, and you guys
- 9 have worked on this for years, and years, and
- 10 years. And so I want to recognize that, that
- 11 I've seen you do that, and there's many nights
- 12 that you've stayed awake trying to solve our
- 13 problems. So we appreciate that.
- 14 So in that spirit I also want to thank you
- 15 for opening up the play book on outreach. We
- 16 were proud to partner with you guys on the data
- 17 viewer. It's amazing that people can put in
- 18 their address and be able to see the
- 19 challenges, but also the opportunities. And
- 20 opening up that play book to the data viewer
- 21 also led us to those community conversations.
- 22 So I don't know who thought about that, feeding
- 23 them supper, and idea. But that sure was a
- 24 great idea.
- We also could not do it alone. We have

- 1 tremendous support from people like the Greater
- 2 New Orleans Foundation, and right here locally,
- 3 the Bayou Community Foundation. They have
- 4 supported us to help you guys expand that
- 5 outreach. And we look forward to iterations of
- 6 that to come with also the support of, Fourchon
- 7 Oilman's Association. So we want to thank you
- 8 for opening up the play book, and being
- 9 receptive, and for engaging those folks. We do
- 10 think that that has led to a deeper engagement
- and a better understanding even here tonight.
- 12 So we would like to comment lots of things
- 13 on lots of projects, barrier islands, increase
- 14 Atchafalaya. Maybe that should be in the
- 15 central and not southwest, don't give them
- 16 credit for that, that needs to be a central and
- 17 southeast coast. But we'll detail those
- 18 comments, we wanted to hit on those areas
- 19 tonight. So thank you.
- 20 MR. SPEYRER:
- 21 Thank you, Simone. Ted Falgout, Mac Wade
- 22 will be next.
- 23 MR. FALGOUT:
- 24 Chairman Bradberry, Ted Falgout. I've
- 25 been around as long as Donald Lirette said.

1 I've been involved in this initiative and I'm

- very happy, you know, planning is a very
- 3 important part of this process. And you all
- 4 have put a lot of work into it. I'm very proud
- 5 to be a, a founding member of Restore or
- 6 Retreat and what Simone just said, I ditto
- 7 that.
- 8 The only thing I want to add, you know,
 9 Restore or Retreat was formed with the intent
 10 to support very large-scale coastal
 11 restoration. And I cannot overemphasize the
 12 importance of fresh water diversion, well,
- sediment diversions I should say, so fresh
- 14 water is going to be a part of it, to this
- 15 system. And without that 800 pound gorilla as
- 16 our tool in restoration I think, you know, we
- 17 can support the Barataria islands, we can
- 18 support the interim line of defense. But
- 19 unless you have a sustaining river diversion
- 20 system that will year in and year out come in
- 21 and rebuild and sustain automatically, without
- 22 investing additional dollars other than the
- 23 construction, we're just not going to be able
- 24 to achieve the level of success that we would
- 25 all want. Thank you.

MR. SPEYRER:

Thank you, Ted. Mac's coming up. Jay
Walker, you'll be next.

MR. WADE:

Mr. Chairman, members of the CPRA, thank you very much for giving me this chance to be here tonight. I'm Mac Wade, Executive Director for the Port of Morgan City. On behalf of the Port of Morgan City I have the following comments regarding CPRA's 2017 draft coastal Master Plan. We are in support of the marsh creation of Point au Fer remaining in the 2017 coastal Master Plan. Point au Fer serves as the first line of defense for Morgan City, East St. Mary, and western Terrebonne during a hurricane. We also support a long-distance settlement pipeline which would be strategically placed in the Atchafalaya River to send the sediment to East Terrebonne marsh creation. We propose using settlement from the Atchafalaya River for either of these, or for both of these projects which would help remove constraints and allow the river to flow out to the Gulf of Mexico, providing flood reduction of Morgan city and East St. Mary.

While the increase in flow to Terrebonne is intended to create the marsh in eastern

Terrebonne, the Port of Morgan City has concerns of its possible affects on Bayou

Chene, the Atchafalaya River to the Gulf.

Adequate modeling has not been done yet regarding velocity or additional settlement accumulations. We request that through valued engineering you investigate decreasing waters from Lake Maurette through Lake Kleward and Bayou Boeuf, and reducing the flow from the, off the Atchafalaya River to the proposed areas. We ask that you look into the possibility that this might accomplish your goals with less impact on industry.

Finally, the Port of Morgan City is in support of the St. Mary Levee District, Bayou Chene flood protection and diversion project, and encourage you to include the projects in the final 2017 Master Plan. This project enhances the natural flow of water from Lake Maurette to eastern Terrebonne. We also support the advancement and full implementation of the St. Mary backwater flooding from Morgan City, St. Mary flood protection, and Bayou

- Teche flood protection areas as requested by the St. Mary Levee District.
- In closing I would like to note that the projects we are supporting are regional in nature. They would each provide benefits to
- 6 Terrebonne, St. Mary Parish, and some of the
- 7 in some instances Assumption, St. Martin,
- 8 Iberville, Lafourche Parishes would all benefit
- 9 as well. And just one other little quick note.
- 10 Mr. Bradberry, you told me many I come
- 11 before y'all all the time, many, many meetings.
- 12 You said you need to find something to
- 13 piggy-back on, a project in the area. Well, it
- 14 looks like the Atchafalaya has finally found a
- 15 friend. It looks like we can get some traction
- 16 on trying to maybe get a long-distance
- 17 settlement pipeline.
- 18 So thank y'all again very much for all
- 19 y'all's assistance and help.
- 20 MR. SPEYRER:
- Thank you, Mac. Jay is coming up. Chett
- 22 Chiasson, you'll be next. And once again,
- 23 thanks to all our speakers for, for complying
- 24 with our small time limit here. We appreciate
- 25 it.

MR. WALKER:

19

20

21

22

23

24

25

Good evening, Mr. Bradberry, other members Thank y'all for coming to Houma in of CPRA. Terrebonne Parish where we are experiencing impact, and land loss, and the risk of tidal flooding more than most in our state. My name is Jay Walker and I'm the chairman of the Morganza Action Coalition. It's a grassroots advocacy group formed in 2006 to promote the Morganza-to-the-Gulf Hurricane Protection System as critical protection for Terrebonne and Lafourche Parishes. This year we have also expanded our work to support the levee projects of the north Lafourche Levee District and south Lafourche Levee Districts in addition to the work of the Terrebonne Levee and Conservation District on the Morganza project.

We are pleased to see the Morganza system once again proposed for the inclusion in the 2017 Master Plan. MAC urges the CPRA, Governor Edwards, and the Louisiana legislature to continue to make the completion of this system, particularly the H&C Lock Complex a high priority for funding in our state's integrated coastal protection and restoration plan. The

Morganza levee, lock, and flood gate system consists of approximately ninety-eight miles of earthen levee, twenty-two flood gates on navigable waterways, twenty-three environmental water control structures, a lock complex in the Houma, and adjoining flood gates and dam enclosures. After nearly thirty years of studies on the marshland system it was federally authorized by congress in 2014.

Morganza is designed to protect more than 150,000 residents of Lafourche Parishes.

Morganza is also essential to the sustainability, economic viability, and growth of Terrebonne and Lafourche Parishes as well as our ability to continue to fuel and feed this entire nation. In fact, the entire Morganza system and Lafourche levee tie-ins will go to manage the gifts and protect the homes and businesses of thousands of workers who provide vital services to the Gulf of Mexico, energy port of Port Fourchon, and not to mention miles of pipelines and other critical infrastructure.

These reasons are why the Terrebonne, the residents of Terrebonne and Lafourche Parishes have voted to tax themselves to fund

1 construction in the Morganza and other local

2 levees despite the federal government's

3 unwillingness to fund such a critical project

4 for our nation's energy and economic security.

5 The State of Louisiana has recognized the

6 importance of the Morganza as well as the Gulf

7 and thanks to the State appropriations and tax

8 revenue that they, like Reggie said, almost

\$400 million in local and state money has been

10 committed to or spent on the Morganza system.

11 And it's a federally approved system that

12 receives no federal funding.

9

13

14

15

16

17

18

19

20

21

22

23

24

25

MAC continues to aggressively advocate for state and federal dollars to fund the completion of the lock complex as soon as possible as well as the remaining levee segments and flood gates in the Morganza system. This is critical to the survival of our region. Also I must mention that it should not be taken lightly that the restoration efforts completed on the flood side of the Morganza-to-the-Gulf project including the barrier island, marsh creation, restoration,

survivability of the Morganza project and

ridge recreation, are all vital to long-term

reduces project maintenance costs that would be viable for other restoration efforts.

Once again, thanks for coming here to

Terrebonne Parish and for recognizing the value
of the Morganza-to-the-Gulf plan. Our bayou
region community does not only need the
protection of the Morganza, we deserve it.

Thank y'all.

_

MR. SPEYRER:

- Thank you, Jay. Chett. Randy Moertelle, you're next.
- 12 MR. CHIASSON:

Good evening. Can I hold it? My name is Chett Chiasson, I'm the Executive Director for the Greater Lafourche Port Commission which, if you don't know, is in charge of Port Fourchon and the South Lafourche airport up in Galliano. My port is the only elected port commission in the state. Just a little caveat, just so you know.

We really need to get the restoration done now. We must act to secure a strong, safe, and productive future for the people, the wildlife, and the histories of coastal Louisiana. I'm encouraged to see that the draft Master Plan

does include implementation periods that prioritize how projects should be advanced over time. And I'm supportive of the prioritization of projects that are allocated funds regardless of implementation periods. I also support the Master Plan process. Now more than ever eyes are on this ambitious restoration effort and this undoubtedly includes any potential future investors in the industry of coastal Louisiana.

21

22

23

24

25

The red, future without action map, which is really a misnomer, but also causes my face to get red because of my blood pressure rise, conveys an unsustainable business environment for many areas of shoreline coast including Port Fourchon. However, since about the year 2000 Port Fourchon alone has created nearly a thousand acres in mitigation activities, a thousand acres of marsh. While we acknowledge these independent efforts are hard to capture, we must acknowledge the synergistic and consistent efforts to improve the health of our coastline. You have to grasp those projects. There's numerous projects going on along the coastline that we know, like I said, it's difficult to grasp and capture. But there are,

- there are projects going on by local entities, state entities, that are not CPRA, and we need
- 3 to find a way to capture that and not paint
- 4 such a bleak picture, although it is. We don't
- 5 deny that. But there is, there are projects
- 6 going on that are not being recognized, and we
- 7 need to recognize those.
- 8 We need to put our existing funding
- 9 resources to work wisely and quickly and secure
- 10 additional resources to maintain as much as
- 11 Louisiana we all know and love. In addition to
- 12 the steady revenue stream coming to the state
- 13 for the next fifteen years the people of
- 14 Louisiana and its leaders much develop
- 15 additional and dependable revenue streams and
- 16 cost-saving opportunities such as bonding
- 17 projects to fund the Master Plan in its
- 18 entirety. The Greater Lafourche Commission has
- 19 experience in this area and we wish to offer us
- 20 as a resource for the state. Thank you.
- 21 MR. SPEYRER:
- Thank you, Chett. Randy. Next up will be
- 23 Blaise LeCompte.
- 24 MR. MOERTELLE:
- Okay. You can start the clock. My name

is Randy Moertelle. I would like to commend all the planner, modelers, stakeholders that work tirelessly developing this strategy plan. My name is Randy Moertelle. I am the land manager for 30,000 acres of marsh in western Terrebonne Parish, not eastern, western called Point au Fer Island. This island is south of Morgan City. Okay? And I know Senator Chabert got up and said, "It's doing great. The other side is not doing well." That's not true. you talk to any of my lessees, duck hunters, anybody on Point au Fer Island, it's falling apart rapidly. Okay?

You do have a project in there, it is 13,000 acres of marsh creation. I am speaking in support of that project, this one specific project. It's ID Number 03.MC.09. Okay? And it is a barrier island, it is a good barrier island. It doesn't protect Houma, it protects Morgan City. However, it's in Terrebonne Parish, not St. Mary Parish.

So remember, we've had many, many people talk about - President Dove talked about multiple lines of defense, Senator Chabert talked about science, Johnny Bradberry talked

about best science, Bren talked about improved 1 science and technical analysis, Z talked about 2 3 science, and Reggie Dupre talked about multiple lines of defense. Well, a multiple line of 4 5 defense works, the closer it is to the Gulf, that's the first speed bump and then as it 6 7 gets, it keeps knocking the, the storm surge 8 down. And Point au Fer Island is a very 9 important storm surge breaker. Okay?

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And just to, just to give you an idea. In the past forty-three years we've had three hurricanes go directly over Point au Fer Hurricane Carmen in 1974 had a 150 Island. mile an hour wind and it dropped to 120 after passing directly over the island, it protected Hurricane Babe in 1977 was a 75 Abbeville. mile per hour hurricane that went straight over the island. Hurricane Andrew, and a lot of us remember Hurricane Andrew very well, it went, it went 140 miles per hour and dropped to 115 after passing over Point au Fer Island. a very, very, very important island. And that marsh creation, we want to keep it in there. am talking in support of it, I love it, that it's there.

1 Now, a question that I had asked. also a member of the landowner focus group. 2 And a question I had asked repeatedly in the 3 2012 plan, but it got thrown out. And I'm 4 5 going, "Why was it in the draft plan and then it was thrown out?" I was not the manager of 6 Point au Fer Island at the time. I am now and 7 8 I'm going, "Okay. They said, Well, it scored 9 real high in the science but it got thrown out politically.'" And I'm going, "Okay. Well, 10 then let's talk about the science this time. 11 We don't want it to get thrown out politically, 12 13 we want to keep it in because of the science." On page ES11 of the plan it says, "At the 14 15 forefront of science and innovation," 16 highlighted in brown. This is highlighted in brown in y'all's plan. "The unprecedented 17 18 investment in coastal restoration in the last ten years has put Louisiana in the forefront of 19 using science and innovation to a plan, a 20 sustainable future for our coastal communities, 21 22 and our valuable ecosystem. Our Master Plan 23 approach with its long-term view considerations 24 of climate change and integration of natural 25 system and community resilience now leads the

- 1 nation in large-scale ecosystem restoration
- 2 thinking. The modeling approach, designed
- 3 specifically to address the needs of the
- 4 planning process and providing quantitative
- 5 comparisons of options for actions, is used
- 6 across the world as a model for science-based
- 7 coastal decision making." Okay. Let's keep
- 8 that in mind.
- 9 Before Kareem left I said, "How well did
- 10 Point au Fer turn out in the model?" And it
- 11 turned out, number five. It was the number
- 12 five highest ranking marsh creation in the
- 13 state. Thank you.
- 14 MR. SPEYRER:
- 15 Thank you, Randy. Blaise. Marguerite
- 16 Knight Erwin, you're next.
- 17 MR. LECOMPTE:
- 18 Thanks for the opportunity to make
- 19 comments tonight. My name is Blaise LeCompte.
- 20 I'm from Chauvin, and part of a large family in
- 21 that area. And, you know, I was speaking
- 22 tonight about Mr. Donald and Herdis and, you
- 23 know, I go back forty years ago, I could
- 24 still hear Norby's dad and my Uncle Jacob
- 25 talking about, we need to start doing things,

right? We've got to stop planning and studying and start doing things. And I really feel confident that we're starting to do some things now.

I've got three items I'd like to talk about real quick. One of them is outreach. I'm a member and a park volunteer with Bayou Grace that's sponsoring the students that came in this week and I want us to promote, using some of our local non-profits, to do some of this outreach. We've got a lot of non-profits around here and I think they have a good source of contacts in the communities. Use them for outreach.

The second one I was actually going to talk about, about some of this tidal action that we're seeing. It's a lot more active now than it has been for a long time. And I was actually going to talk about our camp out at the north rim of Lake Barre, right at the Schlitz camp everybody knows, right? And I can remember sitting out there forty years ago and there was a pipeline canal that was a dead end, and it had a well head in it, and no water flowed through there. That particular one now,

- that well head is gone. But that, that dead end is opened up now. All that marsh is just flowing right into the bayou - Lake Barre.
- You know, I was going to start talking 4 5 about that maybe we ought to block some of these pipelines off again. But you know what? 6 This ring lip will do it, too, that we talked 7 8 about around Lake Barre. Right? It will do 9 the same thing that has blocking that 10 particular one. But that water action is just tremendous coming through those areas now. 11
 - And then the last thing, again, is I would like to also encourage us to use local workers and local companies. I think that's very important, I want to, you know, emphasize that. Let's continue to use local workers. And because we can put that in our contracts, that we want to have preference to local companies, you know, for a slight period. Okay? That's it. Thank you.
- 21 MR. SPEYRER:

12

13

14

15

16

17

18

19

20

- 22 Thank you, Blaise. Marguerite. Jeff 23 Bordelon, you'll be next.
- 24 MS. KNIGHT ERWIN:
- 25 Good evening. I'm Marguerite Knight Erwin

and I am chairman of the Bayou Lafourche Area
Convention and Visitor's Bureau. And our coast
is one of the most unique and valuable
resources we have here in Louisiana. It's home
to millions of people and a natural habitat for
birds, fish, other wildlife. Our coast is
worth restoring and, above all else, saving.

Most everyone is familiar with Louisiana's vast commercial fishing. But in Lafourche Parish our number one tourist attraction is recreational fishing. Tourists come from all over the world to fish our waters, view our wildlife, bird watch, see our swamps, and enjoy our culinary treasures. We can't stand by and continue to watch what we love float away.

So on behalf of Louisiana's Cajun Bayou, or better known as Lafourche Parish Tourist Commission, we are in support of the Master Plan and those projects that protect fisheries, wildlife, and our ecosystem all along the coast while providing economic development as long as they are based on sound science. On an additional note, we want to thank you for the recent work on Bayou Lafourche and the Caminada project. We are grateful to see the inclusion

- of the extensive marsh coalition marsh creation at Golden Meadow.
- So on behalf of our tourist commission in Lafourche Parish, thank you.
- 5 MR. SPEYRER:
- 6 Thank you, Marguerite. Jeff Bordelon.
- 7 Tim Matte, you're next, Tim.
- 8 MR. BORDELON:
- 9 Good evening. My name is Jeff Bordelon
 10 and I work for EMR Southern Recycling in
- 11 Amelia. The 2017 Master Plan in its current
- 12 state will negatively impact Southern
- 13 Recycling, specifically our ability to bring in
- 14 larger ships for dismantling. And with this
- increased sediment proposed with the Bayou
- 16 Boeuf locks will make it that much more
- 17 difficult. The Master Plan stands to
- 18 jeopardize the future viability of our facility
- 19 and the jobs of more than a hundred people that
- 20 support it. Southern Recycling believes that
- 21 any version of the Master Plan that causes
- 22 sediment must also include secure funds for the
- 23 dredging necessary to maintain the eighteen
- 24 feet of water depth to continue operating our
- 25 | facility. We appreciate the opportunity to

meet with CPRA officials after this meeting to
work together on developing a Master Plan which
serves the interest of all the people and the
industries of southern Louisiana. Thank you.

MR. SPEYRER:

Thank you, Jeff. Tim. Eddie Callais, you're next.

8 MR. MATTE:

Thank you. My name is Tim Matte, and I'm the Executive Director of St. Mary Levee District and I congratulate CPRA on the, on this comprehensive plan and I think we look forward to continuing to work with you on its implementation. We are, we do have a few comments, though, on specific projects.

First off, we would encourage the CPRA

Board to include the Bayou Chene protection and
diversion project in the 2017 plan. This is a

project that was included in the 2012 plan, and
I think it was included in the 2012 plan

primarily as a result of its successful
implementation on a temporary basis after the

2011 flood. It proved itself as effective,

consequently it was able to get in the plan.

And so we are disappointed that it is not

included in the plan this time despite the fact
that, once again, in 2016 we had to implement
the temporary structure. It's a project that,
that serves the entire region. It's, it's one
of vast importance to all of us and so we,
again, encourage you to include that in the
plan.

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

The second project we would like to mention is the Morgan City back levee project. This is a project that we have been cooperatively working with CPRA in implementing, and as such have implemented significant portions of that project using both State and local tax dollars. And so we're, we're getting close on this particular project to actually having the loop closed. objective of which is to achieve a hundred year protection. And it's fairly unique along the coast of Louisiana. So with a small, tiny investment by CPRA in this project, I we think we can goal of a hundred year flood protection for the Morgan City and surrounding St. Mary Parish area. Our concern is that it is included in the plan as a thirty to fifty year implementation period and we would like to see

that moved forward where we can actually get
something done much quicker than that. You
know, as you know it's a working coast. And
that's the important factor that we're, we're
trying to address. We need to provide a place
where folks can, can both live and work on the
coast of Louisiana.

We also are interested in seeing a project called the Bayou Teche flood protection project. We think it's probably reflective of some of the protection that's called for in the, in the Iberia, St. Mary project that's mentioned. However, this would be the interim step that provides protection for the Franklin area where they have had some repetitive flood losses. And it would only be at a nominal cost, a \$10 million cost.

The St. Mary Levee District also supports the efforts and comments made by the Morgan City Harbor and Terminal District, the Port of Morgan City regarding projects of their interest. Specifically we are very interested in and very supportive of the Point au Fer restoration project and want to see that also moved forward.

And lastly, we would, we would like CPRA to consider the opportunities that might be provided by coordinating the increase of the Atchafalaya flow to Terrebonne project with the Bayou Chene project. We believe this coordination would allow for a more effective river diversion project that would provide for fewer local negative impacts. We thank you for your, for your attention and appreciate the opportunity to make these comments tonight. MR. SPEYRER:

Thank you, Jim. Eddie Callais. Jack Moore, you're next.

MR. CALLAIS:

Good evening. And thanks again for this opportunity of allowing the public to comment. My name is Eddie Callais and I'm here tonight representing the Lafourche Chamber of Commerce. Our organization is comprised of over 400 businesses throughout Lafourche Parish.

First of all I would like to thank CPRA for a couple of recent projects that have come to completion. The Caminada Headlands Project and the freshwater project in Bayou Lafourche. As Chett and Simone had mentioned along the

1 Caminada headlands, it is critical to the

2 protection it provides for Port Fourchon as

3 | well as the south Lafourche area. Port

4 Fourthon is an economic engine that is critical

5 to businesses and residents of Lafourche

6 Parish. As well as we know, not only Lafourche

7 Parish, but our state and our nation.

Beyond that we are also in support of the marsh restoration project in Golden Meadow.

And as Marguerite mentioned, we are also in support of the marine habitat project. We, as well, believe that the - our fisheries, and heritage, and recreational fishing are important to the residents and businesses of

Lafourche Parish. So we also support that.

And in closing tonight, we will provide additional written comments. But in closing, I also want to echo the sentiment of other speakers on using local resources, local employers to be able to put some of these projects to, to work. I know I heard earlier that the governor is in favor of trying to keep money in Louisiana and I want to echo that sentiment as well. Thanks again for your time this evening.

MR. SPEYRER:

Thank you, Eddie. Jack Moore. Is Jack still here? Alex Kolker. Donald Bogan, you're next.

MR. KOLKER:

Alex Kolker with the Louisiana
Universities Marine Consortium in Cocodrie,
Louisiana. So I wanted to thank you, and CPRA,
and the folks that put this together and for
coming up with a restoration plan that was
science-based and that took into account all of
the complexities of our coast, and the changing
nature of the, the physical environment here on
Earth. And so I wanted to thank you for, for
really having come up with a science-based, and
what is frankly a well done plan.

I know, as someone that studies the coast and works on the coast, that this is also a very complicated coast to understand. And so the second half of my comment is to, is to all of you. We are an institution that is based on marine science and marine education and we're based here in south Louisiana. And, of course, we love Terrebonne Parish. And that is that if you all have questions about coastal issues

- 1 here in Louisiana, and this that you come to
- 2 us. And if there is anything that you have
- 3 that you have a question about how the science
- 4 works, we are a resource for you here to turn
- 5 to. So, please. Thank you and thank you.
- 6 MR. SPEYRER:
- 7 Thank you, Alex. Donald, and then, maybe
- 8 H. J. Rhodes, or L. J. Rhodes will be next.
- 9 MR. BOGAN:
- 10 Thank you. Donald Bogan with Bayou
- 11 Interfaith Community Organizing. First of all,
- 12 I would like to thank CPRA. I think this is my
- 13 second or third rodeo. It not always has been
- 14 a pleasant process, but I know by listening to
- 15 each other that we have grew.
- It's been a long evening so I'm going to
- 17 restrict my time. I just want to highlight
- 18 some things that I haven't heard tonight that's
- 19 surrounding non-structure. And so we've been
- 20 working with some regional partners of the
- 21 national park and we are going to submit our
- 22 comments formally. One of the things we want
- 23 to recommend to CPRA as far as for every eighty
- 24 cents that is spent on structure projects, that
- 25 twenty cents is spent on non-structure. And

that would be keeping in the original theory
that the non-structure portion of the State
Master Plan would be around the twenty percent
area.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Another thing I want to talk about concerning non-structure. We've seen the map, we've seen the data, and we know that some people is going to be left out. Unfortunately, talking to my colleagues, we feel that the people that are more at risk are the low-income people. And so the way that we analyze the current draft plan is that we think that the low-income people would be left out. But the way that the state is valuing communities to be able to get those non-structure dollars, we thing that that process should be changed, that it should not be based on population growth, it should be based on the most vulnerable people, the people that are most affected by coastal erosion, and coastal land loss, and sea level rise.

And so we are going to submit our formal comments on how we think that they can accommodate us with a twenty percent area and how to pay for that. I thank you for the

- 1 comments and I stress the importance of people
- 2 that are more at risk.
- 3 MR. SPEYRER:
- Thank you, Donald. Mr. Rhodes. And then
- 5 Johanna, you'll be next.
- 6 MR. RHODES:
- 7 Thank you. I have a simple thing. All I
- 8 have to say is I, in this part of the country I
- 9 worked in, in the oil field. And we completed
- 10 wells all over the country, you know. The Gulf
- of Mexico, not like some people did but we -
- 12 you get an education. And I think, you know,
- we were saying, "Why does this all happen now?
- 14 Why do people do these things?" These things
- 15 are happening because it's worth it. You know?
- 16 If you could see the things I've seen when
- 17 you're in the service of these companies. You
- 18 have a lot of time, a lot of time waiting on
- 19 the rigs and some God forsaken places. And,
- 20 you know, you see the wildlife. You know? And
- 21 I'm not a, I'm not a deep guy in that way, but
- 22 at any rate, to see what all this is all about.
- 23 And so I say it's worth saving.
- 24 And I've seen some of the mistakes now.
- 25 I've been around a long time and I even

1 remember when they said Pearl Harbor was bombed. But at any rate, you know, we made 2 some mistakes. And in Louisiana we have, 3 sometimes we have, we just do that, we shoot 4 5 ourselves in the foot. And in 1945 there was a parish president located on the Mississippi 6 7 River and he wanted - and we were talking 8 about when we were first going offshore, how it 9 was a complicated operation. And what it meant was, in simple language, money. And so it was 10 a big argument between - I don't know where in 11 12 the hell our congressional delegation was, but 13 they didn't raise heat. He gets in a big argument with Harry Truman. And this is 1945, 14 15 now. And he says that Harry Truman offered him 16 thirty-seven and a half percent for all his production and his oil. Well, he owns 17 18 (inaudible) and finally Harry Truman - Truman, 19 he told him where to go.

And he, he was a man that you couldn't, couldn't reason with if you know him. In fact, his daughter one time said, "Mother, why don't you stop Father - tell him to quit saying horse manure." And she said, "Darling, it took me twenty-five years to get him to say manure."

20

21

22

23

24

25

And so, at any rate, if you look at it wisely, thirty-seven and a half percent is almost fifty percent. And in the twenty-five years that followed - this is an actual fact, you can trust it. In the twenty-five years that followed, \$27.5 billion, billion dollars, would have come to this state. And just imagine if you had funding like that, trying to do what we're doing now.

And we are fifty years later. I, I've seen this place - we fly a lot, little planes. We were the first people to ride helicopters offshore. I've seen all the, you know, things you wouldn't imagine. It's really nice to see. I watched a little bird one night with her little ones one night running around, and she was giving them crawfish. And then environmentalist say, "Why you got all this noise up here?"

This rig was a big, beautiful rig. It lit up like a city. And that little bird came out and fed her kids. So they were wrong sometimes. But all I'm saying is, we're doing this because it's worth it. And we've got to stop, you know, making mistakes and shooting

- 1 ourselves in the foot. Thank you.
- 2 MR. SPEYRER:
- 3 Can you state your name, Mr. Rhodes, for
- 4 me?
- 5 MR. RHODES:
- W. J. Rhodes.
- 7 MR. SPEYRER:
- 8 Okay. Thank you, Mr. Rhodes. Johanna
- 9 deGraffenreid. Charlie Bush, you're next.
- 10 MS. DEGRAFFENREID:
- 11 Hi. My name is Johanna deGraffenreid and
- 12 I work with Gulf Restoration Network. We're a
- 13 New Orleans based water and wetlands
- 14 organization and we serve communities around
- 15 the Gulf. I want to really highlight some of
- 16 the things that we heard earlier this evening
- 17 and support the non-structural elements of the
- 18 coastal Master Plan. I just want to thank you
- 19 all for the opportunity to speak here today and
- 20 for the opportunity to provide true public
- 21 input in this forum.
- I would say that first, we really do
- 23 appreciate the community and economic
- 24 development approach throughout the plan. We
- 25 support what's been said earlier tonight about

the fact that this plan needs to be people-centered and then low and moderate income individuals. We would also say that through a creation of some small business development programs and policies, as well as employment opportunities that pay living wages, we insure that the coastal Master Plan is used as a vehicle to employ our coastal community.

We would also ask that local small businesses especially benefit from contracting opportunities and that those be provided with preference in the coastal Master Plan. I also want to say that in terms of the non-structural aspects of the coastal Master Plan, that we would encourage a prioritization team of funding, that it is based on risk, not based on cost-benefit analysis, as is currently listed in the coastal Master Plan. That those were low-income individuals and that those who are most at risk of flooding be prioritized for both elevation and for voluntary buyout.

We also ask that there be a more comprehensive plan around volunteering for buyouts, and that that be something that's elaborated on in the subsequent Annual Plans as

- 1 you all continue to develop them. Thank you so
- 2 much for your time.
- 3 MR. SPEYRER:
- Thank you. Charlie, come on up. Janet
- 5 Rhoders, you're next.
- 6 MR. BUSH:
- 7 Gentlemen, thank you very much. My name
- 8 is Charlie Bush and I'm involved with the TAG
- 9 Louisiana program and the Department of
- 10 Wildlife and Fisheries. I, I fish the
- 11 Terrebonne and Barataria estuary two or three
- 12 times a week. And my main purpose or goal is
- 13 to tag fish for research so that we can have a
- 14 healthy estuary.
- I was on the water today, and I want to
- 16 share with you just one quick note that -
- 17 believe it or not, before our very eyes we see
- 18 our coastline disappearing. I mean, last week
- 19 the land that was there had disappeared in one
- 20 week. I had an area that was actually four
- 21 feet wide is now twenty feet wide in a week's
- 22 time, with one front coming through. And I, I
- 23 can't reiterate the importance of a fresh water
- 24 estuary. We need to maintain that fresh water
- 25 estuary, without that we lose our fisheries.

1 A gentleman stated before that the diversions help so much, and they do. I thank 2 you so much for the opportunity to be here. 3 And I want just to remind one thing, that we 4 5 all - that this program, the 2017 Master Plan gives us hope, gives us hope for our future. 6 7 You know, in my seventy-one years I saw 8 tremendous destruction in Louisiana. This 9 program finally gives us some hope. And I want to remind you gentlemen, you have a moral 10 responsibility - there's an awful lot of money 11 involved. You have a moral responsibility for 12 13 your children and our grandchildren. Please use it wisely. Thank you very much. 14 15 MR. SPEYRER: 16 Thank you, Mr. Charlie. Janet. Ernest Babin, Jr., you'll be next. 17 18 MS. RHODERS: Good afternoon. 19 My name is Janet Rhoders. I advocate for the community of Leeville in 20 Lafourche Parish. I'm a non-profit in 21 22 Leeville. I want to thank CPRA and all of your

efforts. I wanted to personally thank Bren

because I have no expertise in this, in coastal

restoration but he's been very patient with me,

23

24

25

and very thorough with me, and spent a lot of time that he probably really didn't have to explain different aspects of the plan to me. So I thank you for that, Bren.

24

25

While you know this plan is based upon science, we have to realize that we need some common sense as well. And as a previous gentleman emphasized, where he's from - I've been fishing in Leeville since 1991. The vast areas that are washing away are as a result of weirs, and canals, and dead end canals that are failing. I have brought this issue up before, why aren't these canals and weirs being maintained? And I've been told there's, there's no enforcement, there's not personnel. But it seems to me they could create an agency that could go out and fine these gas and oil companies that, that are not maintaining the terms of their permit. And just by the fines alone that could be imposed alone could fund this particular agency.

We could spend all the millions of dollars that we want, or billions, but if we don't correct the problems that are causing this, then we're throwing money away. And, yes, the

- 1 Caminada headlands is a token program for CPRA,
- 2 but I really am concerned about, with one major
- 3 storm, hundreds and millions of dollars of sand
- 4 is going to wash away. I know that rocks are a
- 5 bad word at CPRA, but sometimes I think that we
- 6 might need to come up with some kind of
- 7 reinforcement when we have sand involved.
- 8 Again, that's not my area of expertise.
- 9 But I have been really encouraged by the
- 10 draft plan, that it does show some projects in
- 11 Leeville. And one thing I would like to add,
- 12 that the southwest and the southeast canals at
- 13 the intersection of Bayou Lafourche are about
- 14 to fail. And when that occurs, with that
- 15 thirty foot depth and that strong current
- 16 there, we're going to have catastrophic land
- 17 loss in Leeville that I don't believe that can
- 18 be restored. And I think Windell Curole can
- 19 attest to that as well. So I would really like
- 20 for you to put some immediate emphasis on that
- 21 area. Thank you.
- 22 MR. SPEYRER:
- 23 Thank you, Janet. Ernest. Lucretia
- 24 McBride, you're next.
- 25 MR. BABIN:

Ernest Babin. I currently serve on the Terrebonne Parish Coastal Zone Management Committee. And I wasn't going to get up and speak but Mr. Zeringue, Representative Zeringue woke me up by saying that it needs to be said that the eastern part of Terrebonne Parish is, is just going to be washed away soon. Between Lake Barre and (inaudible) there's about a thirty yard strip of land before Lake Barre and (inaudible) also. The, the Morganza-to-the-Gulf levee that is going to up to (inaudible), if nothing is done with that triangle in there, that is just like building the Great Wall of China that they did in New Orleans East. Take that levee because it's going to be a straight shot to the Gulf.

16

17

18

19

20

21

22

23

24

25

And I live on Bayou Terrebonne, just two miles from the intercoastal. And when the levee broke in Montague for two hurricanes, that's when the water came from the south trying to get out the intercoastal to Houma. So if we have something catastrophic in that area, the water is going into Terrebonne general, downtown Houma. It's going to get there, because I've seen it get there with just

those storms that missed us. This was days after the hurricane that the water came up.

Now, we've got a bunch of small agencies that get grants for projects and stuff. I see it, being on the Coastal Zone Board, they do their little project, throw money at it. And things in Terrebonne, eastern Terrebonne, they get thrown to the side because it's going to take some money to fix that. And they keep saying, "No. It's out of the budget, it's out of the funding." Well, they will have to pool the money, get the money, do something on that northern rim of Terrebonne Bay there because that's going to be the Achilles heel there to Terrebonne Parish. And, and like she just said, toward Bayou Lafourche area, that's the same area she was talking about.

So thank y'all for listening to us. And thank you, Jerome, for hanging around and listening to everybody.

21 MR. SPEYRER:

22 Thank you, Ernest. Lucretia McBride.

23 Peggy Case, you'll be next.

24 MS. MCBRIDE:

Thank you, Mr. Chairman and assembled

1 committee members. I want to tell you that my name is Lucretia McBride and I live here in 2 Terrebonne Parish, I reside in Houma. 3 been here for about forty years. I represent 4 5 our group, Coastal Louisiana Advocates for Cemetery Preservation. It's something we don't 6 7 generally first think about when we think about 8 coastal erosion, or water surge, or a heavy 9 storm, or a hurricane. Our group inherited our first case in 1980 when I worked for the 10 sheriff's office and the old sheriff brought a 11 12 box of bones down and said, "Do what, whatever 13 you do, whatever we pay you to do here. out where these bones came from." It turns out 14 15 those bones had washed out of an abandoned 16 cemetery in 1930 and landed on (inaudible) Island. In our investigation to find out how 17 18 that happened, I became aware of coastal 19 erosion, and land loss, and barrier impact, and 20 many, many environmental things. So I'm here to encourage you to continue 21 22 what you do. The more that you are highly 23 successful, the more success my group has. 24 Abandoned cemeteries exist all over southern

Louisiana along the coast. Some are actually

25

off the coast under the water. When burial
wash out they generally float back. Now, comes
financial consideration for the coroner's
office to take those skeletons or human remains
in and figure out why they're floating in the
water.

24

25

Coastal erosion impacts our community in a way that most people don't think about unless it happens to them. So we just want to remind you that there are groups out along the coast of Louisiana that appreciate the hard work that you do. And we want you to know, make no bones about it, that when we have to respond because there are bones, when we call for help generally people don't show up. You know, we have a list this long of who to call about that. So we formed a coalition, many of our advocates are law enforcement officers who have experience in disaster recovery. We don't ask for money, we don't solicit money, we just volunteer our time. But, again, I'm here one behalf of our group to tell you personally that we appreciate your work.

For somebody that does not normally come to these meetings and, you know, we're

- 1 appreciative of all the people here and what
- 2 they have shared. We listen and we care.
- 3 Thank you very much.
- 4 MR. SPEYRER:
- Thank you. Peggy Case, you're next. And
- 6 with all due respect to the great orators that
- 7 are all these elected officials down here in
- 8 Terrebonne and Lafourche Parishes, I think
- 9 Lucretia had the quote of the night. So thank
- 10 you for that.
- 11 MS. CASE:
- 12 I'm Peggy Case. I'm the director of a
- 13 non-profit in Terrebonne Parish called Track.
- 14 We're essentially a disaster recovery
- 15 organization. We've worked in the field with
- 16 holistic recovery, disaster recovery,
- 17 mitigation, disaster education, recovery
- 18 education, for the past twenty-five years in
- 19 Terrebonne, Lafourche, and sometimes St. Mary.
- I guess my main concern that I want to
- 21 discuss is the non-structural aspect of it.
- 22 I'm all about people and I'm all about
- 23 sustainable housing. And I notice that there
- 24 is really so far there is not really any
- 25 | funding, any substantial funding allocated. I

1 know there is over six million, billion dollars

- 2 that will be allocated to non-structural
- 3 projects, but as of this date through 2020,
- 4 according to the budget, there's only 1.2
- 5 million that would be allocated. And I just
- 6 want to make a note of that. Im sure it's
- 7 funding restrictions and also you want to build
- 8 up the shores before you start. I want to
- 9 bring that up. If possible, if you could start
- 10 looking at possibly considering some projects,
- 11 that would be fantastic.
- 12 Also, the, there is I don't see in the
- 13 plan that there is any alternative to
- 14 elevation, other than elevating, I guess,
- 15 existing structures, and up to fourteen feet.
- 16 And, you know, there's some viable alternatives
- 17 to that if we if we're looking at the
- 18 approach of the working coast, and the housing,
- 19 and the culture, and preserving that, and how
- 20 we can holistically do that. And the, some of
- 21 the viable alternatives would be to construct
- 22 housing that is designed to be, you know, high
- 23 up there, and even above fourteen feet.
- I agree with you that some of the
- 25 structures that exist today obviously were

never planned to be elevated. And elevation 1 projects don't include retrofitting of the roof 2 lines that might, you know - retrofitting the 3 roof lines, the rafters, and what have you. 4 5 I would like you to consider that as an alternative to - to design the houses and 6 7 therefore, you know - we talked about certain 8 areas that you could actually - okay. When 9 you're doing this project, in your plan you talk about, you know, communities, and the 10 community thought, and the community solution. 11 Community being maybe a neighborhood, you know, 12 13 two miles, or whatever. You may want to consider a community the idea of, like, 14 15 redesigning and rebuilding housing communities up in the air. You know, it's a good thought 16 and I would hope that you would consider that 17 18 in the future. And that's about it. 19 And, and, but I do want to, you know 20 sorry. One more thing I just have to say. your community outreach aspect, I agree one 21 gentleman said that there are local NGOs in the 22 23 community that have gained the trust of the 24 community over these years. And I think it

would - I think as a whole they would, you

25

- 1 know, all feel a part of the process if, if
- 2 there was some, if there was a local
- 3 organization there to maybe vet calls of
- 4 whatever size, shape, form, to advocate
- 5 whatever, in whichever way possible. So please
- 6 do give that consideration in the future plans.
- 7 Thank you.
- 8 MR. SPEYRER:
- 9 Thank you, Peggy. Kim Reyher, are you
- 10 still here? Kim? And then Vic Lafont. That
- 11 will be the last one, so if you have any more,
- 12 turn them back in. Get them to the aisles,
- 13 we'll get them picked up.
- 14 MS. REYHER:
- 15 Good evening. I'm Kim Reyher, I represent
- 16 the Coalition to Restore Coastal Louisiana. I
- 17 just want to make three comments in this
- 18 context. The first is to comment the decision
- 19 to deal with the harsh realities of sea level
- 20 rise predictions, to base the plan on current
- 21 science and really to help us grapple with what
- we face in the effects of climate change.
- The second is to support the
- 24 prioritization of the projects that are about
- 25 natural systems, particularly the sediment

diversions, and doing what we can to address the underlying problems that cause the coastal crisis we're facing. Excuse me. We think that restoring the natural systems is really the best investment we can make. And we're pleased, especially to see the significant impact these sediment diversions to use to rebuild land.

The third is to really applaud the outreach effort that's been part of this process. I think the crowd that we saw here a couple of hours ago, that is spreading out now. But it is testament to the effort that you made to really make sure we have public dialogue. I think it's so important that we all understand what is going on, what risks we face, to what extent we have lines of defense, or do not, or are trying to create or recreate them. And to demonstrate to you all and those that you work with, the levels of support and concern that's in the community.

And I want to take the opportunity to highlight a couple other opportunities for dialogue coming up in Abbeville. So if you would like to turn out your neighbors or your

colleagues for exactly this sort of dialogue, please join those and there are details at crcl.org.

Lastly, I want to urge that even as we all consider the long-term picture, the five, fifty year picture, is that we continue to focus on the near-term actions and really apply what we've heard from CPRA about breaking ground on the diversion by 2020. We've heard loud and clear that date, and the efforts that are going towards making that a reality have been impressive. We urge that to be continued and we pledge our support for that.

CRCL did say it's a group that's been involved a long time. Many of our board members are here. We work in partnership with many groups represented in the audience. And we want to do everything we can to help you in your efforts to, to drive action. So that on one hand we're playing for the long-term, but on the other we're doing everything we can in the immediate.

So thank you very much for all your efforts and congratulation on getting to this stage.

1 MR. SPEYRER:

2 Thank you, Kim. Vic.

MR. LAFONT:

Yes, sir. Real quick. Vic Lafont with the South Louisiana Economic Council. I'm one of eight regions across the state that works with research and development. And I apologize for being so late. I was at the Parish Council meeting. If it hasn't been said I want to make sure that it was said for the record.

But first I want to thank y'all for what y'all have done in working with entities not only in this area, but in Lafourche and Caminada area. Working with our levee systems is so critical, so critical for us. Thank you for that.

Second, for allowing us a place at the table. Historically we are not often given that place and say so on things that so affects us. But you're doing that and we really appreciate it and need it.

The third thing, for providing the economic opportunity that this brings our area. It's not a big secret, our area has been hit real bad with the oil and gas downturn, okay?

But this is, we're hoping this will diversify our economy a little bit, may be cause for some of our people to participate in some of that restoration work.

So thank y'all for what y'all do and thank you for bringing this opportunity to us. And please know that we're partnering with a lot of other NGOs like Restore and Retreat to help make this work. So thank you.

MR. SPEYRER:

Thank you, Vic. Did we by any chance miss anyone that would like to speak tonight? State your name, please, sir.

MR. THERIOT:

My name is Cyrus Theriot, and I represent my family members who own about 17,000 acres of property between Bayou Dularge and the Houma navigational canal, by the locks. And we've been managing that property since the 1920's. And over the years the devastation from canals, subsidence, and settling has put a tremendous amount of damages on our property. While I manage 17,000 acres I now have 14,000 or 15,000 acres.

I submitted a land bridge project to try

- 1 to save some of the marshes in Terrebonne
- 2 Parish. And it would extend from the lower
- 3 Dularge levee all the way to Grand Caillou
- 4 Bayou. And we could use the soil from the
- 5 Bayou Grand Caillou as a, as a subsidence for
- 6 the (inaudible). But I'm trying to the salt
- 7 water intrusion from the bayou is so great on
- 8 the eastern side of the inlet that it's killing
- 9 all the vegetation in the upper sections.
- And I manage 17,000, all my neighbors -
- 11 you're looking at moving like 50,000 acres of
- 12 property. That marsh is very crucial for
- 13 estuary growth; trout, redfish, bass, shrimp.
- 14 You name it, it's in that, those marshes. When
- 15 it disappears and goes to water then all your
- 16 seafood disappears and your economy backs up.
- So anyway, it's very important. That's
- 18 why I submitted that plan. I think it would
- 19 work. It would help that area and keep it
- 20 alive a few more years. I thank you and want
- 21 you to look at that. Thank you.
- 22 MR. SPEYRER:
- 23 Thank you, Mr. Cyrus. With that we're
- 24 going to go ahead and conclude the public
- 25 comment portion of the Master Plan

1 presentation. We certainly appreciate

2 everybody's patience as we, as we worked

3 through that process. As a quick reminder, now

4 that the Master Plan is done, what we're going

5 to do is transition and give a brief

6 presentation on the fiscal year 2018 Annual

7 Plan followed by official public comment on

that document. So if anybody wants to get up

9 and leave, now is your chance to do that. But

10 Michael Ellis will come up and give a

11 presentation on the Annual Plan.

8

12

13

14

15

16

17

18

19

20

21

22

23

24

25

As you're walking out the door I am going to make one quick reminder. You have until March twenty-sixth to submit public comments. So if you didn't get a chance to speak tonight or didn't get a chance to say everything, you can still go to our website, submit comments online through e-mail, or hand-write them in person. Thank you.

Okay. If everybody could please go ahead and exit this room if you don't mind. We need to give the next presentation. Everybody can go ahead and exit the room. You can stay next door or out in the hall but we want to go ahead and get the next presentation started for those

that want to hear it. Folks, if you could
please go ahead and exit the room. Thank you.

MR. ELLIS:

I appreciate everyone staying and we don't want to try to force you out of here. Well, who has stayed, I really appreciate it. But honestly, the comments that we heard tonight were really good. We appreciate everyone tonight.

What I'm going to do, I'm going to be very brief. My name is Michael Ellis. I'm the Executive Director for CPRA. We are the, the organization that actually plans the Master Plan, but we also implement the Master Plan. And you heard a good bit about the Master Plan tonight. What I want to talk about is, we also do a draft Annual Plan. What I'm going to present to y'all tonight is the FY 18 draft Annual Plan.

I promise I am going to be brief, but I do recommend that you go read the document, look at the document. It is how we implement our work, it's the projection for the next three years.

That being said, why do we do it? We are

140

1 also mandated to develop an Annual Plan. Part

- 2 of the Annual Plan really comprises three
- 3 things. It is a three-year budget outlook, a
- 4 forecast of what we expect to receive in
- 5 revenues and in expenditures for three years.
- 6 And it also provides implementation schedule,
- 7 it's how we schedule the work over the next
- 8 three years. And also we provide a snapshot
- 9 of, of what we've done in the past year.
- 10 Really, basically we follow the Master
- 11 Plan schedule where we have four public
- 12 hearings we spoke about. Important dates to
- 13 look up and see up here is the public comment
- 14 period does close on the twenty-sixth. So I
- 15 know when you get done with the Master Plan you
- 16 look at the Annual Plan, and we also accept
- 17 public comments on that. And we will, as well,
- 18 this evening after this presentation.
- 19 The year in review. We've heard a little
- 20 bit about the projects, the Bayou Lafourche
- 21 projects and the Caminada projects but we're
- 22 really proud of what we've accomplished in
- 23 2017. I'm not going to go over every project
- 24 up here but these are some some of the
- 25 notable projects. What we've accomplished in

2017 represented eleven projects representing about \$330 million worth of work benefitting over 3,500 acres. So a tremendous amount of work was in 17. Ongoing for projects that are going into 18, twenty-nine projects in construction for a total value of over \$5.5 billion and will benefit 300 miles of levees and over 20,000 acres of wetlands. So a tremendous amount of work is going on in and will go on in 18 as well.

A little bit about the, about the plan and what it covers. Of course, you know, it - we developed the 17 Master Plan which was a very important component of, you know, of the plan as we move forward. So what we expect to see, what you expect to see in the Annual Plan is as the oil spill dollars became more certain over the last year, we're actually - you'll see a lot more emphasis on starting engineering designs. I think that we spoke a little bit about some of the marsh creation projects around, particularly around this area, but we have, if you count the five projects and restore projects that we have out for engineering design right now, it represents

around \$600 million worth of work in marsh creation. So those projects are starting engineering design right now.

Also there's an emphasis on larger, more complex projects. We've heard about the diversions which we think are very important as we look to, you know, reestablish some of the natural processes into the system. So larger projects, a ramp-up of engineering design, and also you'll see a ramp-up of adaptive management.

Adaptive management, the adaptive management program, we will start to see it roll out. Really, in essence what that is, is a way to capture lessons learned, put it back in the system, learn from it, improve our design, improve our planning, improve our construction. And so you'll see a ramp-up in adaptive management in the coming year as well.

Also, the last bullet will be completing older programs. Some of the programs, the CDBG programs, you'll start to see wind down. But you'll also, like I said before, you'll see the oil spill dollars start to increase projects.

This is a very complex table. This is the

revenue expectations for the next three years.

I won't go over it in detail but this is really

3 how we do our business over the next - this is

FY, this is for FY 18. You can see that we,

4

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

we expect to spend, we expect revenues around

6 \$663 million. In total the three year period

7 around \$2.5 billion in revenue over the next

8 three years. So it's, it's a tremendous amount

of effort, a lot of work we're really excited

10 about, you know, the next couple of years.

And, of course, when you have revenues you must match that with the expenditures. So this is an expenditure table of - and I would be happy to go over it in detail, but not tonight. I don't think y'all want to hear that. I think Z is the only person that wants to hear it. This, I like to show this graph, this is also a part of the Annual Plan. What it represents is how we do our business, again, in a pie graph scenario. What's important to me is, is getting the money on the ground. This represents of the, of the \$663 million in revenues and expenditures for next, what we've

is going to construction actually on the

planned for next year, fifty-six percent of it

ground.

Another important point is, you can see the eighteen percent, and that we anticipate in - that is kind of what you'll see in the next couple of years, that that's going to translate into more money in construction. That represents the large oil spill dollars that are coming in as we plan - or as we are coming into our program and we're starting to kick off the design.

So the major funding sources. We have a pretty complicated funding, funding stream coming in to the state. One thing that I want to point out, is we do not receive general funds from the state of Louisiana. We do receive state mineral revenues and, and one important point to bring out there is, previously we would receive, we would expect around \$25 to \$30 million per year. This operates our business, this is how we pay our bills, we pay our salaries, we frontload some of the funding programs and we have to get reimbursed later. So it's a very important component of how we do our business and we are expecting to receive around \$14 million over

the next three years. This is mainly due to oil prices being down.

3

23

24

25

GOMESA, the Gulf of Mexico Energy and Security Act. We anticipate that kicking in in the end of FY 18 or the beginning of federal fiscal year 18. And we expect to, as a state, receive around \$176, maximum of \$176 million dollars in revenue per year, which \$140 would come to the CPRA. So that's, that's going to be a recurring revenue stream that we anticipate receiving in perpetuity. Other funding sources, I won't go over them in detail, but that really - the (inaudible) will represent the oil spill dollars. As you can see, significant efforts are beginning to ramp those programs up. And the last is something we've been used to for many years, particularly in this area, is very beneficial. anticipate around \$80 million a year for the next three years as well.

This is a typical - this is one schedule that you, a typical schedule that you will see in the Annual Plan. It's really, it's part of the implementation schedule, it's how we do our business. But these, in their symbolity, if

you will, P is planning, D is design, C is construction, and W is waiting on funding. So this is how we plan our program, this is how we plan our projects. So this is also something you can look at in detail in the Annual Plan.

Well, Johnny said to make it fast so I hope this is fast enough. We'll be happy to take, take your comments. Thank you.

MR. SPEYRER:

We don't have any forms but if you do want to make a public comment on the Annual Plan just go on up, state your name, and then you can make a comment.

MR. ZERINGUE:

Several people who left gave me their three minutes, so y'all sit back and relax.

We're going to be here for a while. I want to do a couple of things. Obviously with the budget - and I know Mike and Bren are very struggling with the fact that the way the budget is, and the limited funding that we do have, the potential for sweeps and reductions, I can assure to as an appropriations member, I do and work hard to ensure that you maintain the funding and it's not continued to be swept

- 1 from the budget. I think, right now, we're to
- 2 the point where it is going to affect projects.
- 3 And to the point that in addition to the low,
- 4 reduction in terms of oil and gas revenue,
- 5 which is going to have a significant impact on
- 6 you guys as well. So we're going to address
- 7 that.
- 8 One question, though, I wanted to ask in
- 9 the Master Plan. For this fiscal year, how
- 10 much do we have for construction? I know we
- 11 have the capability of six hundred and
- 12 something million. What do we have in terms
- of, to construction? And I know the budget is
- 14 limited and still iffy right now.
- 15 MR. SPEYRER:
- 16 And you also know that you can't ask
- 17 questions.
- 18 MR. ZERINGUE:
- 19 Yeah. So I thought since nobody was
- 20 here I would give it a shot.
- 21 MR. SPEYRER:
- We're going to stick to the format. Off
- 23 to the side.
- 24 MR. ZERINGUE:
- 25 All right. We'll go off to the side. But

- 1 I just, you know, I Thank y'all. Have a
- 2 safe trip back.
- 3 MR. CALLAHAN:
- 4 My name is Barney Callahan. I'm with
- 5 Louisiana Wildlife Federation. And I just want
- 6 to follow suit and say that the federation also
- 7 appreciates all of your efforts in putting
- 8 these meetings on and gathering comments from
- 9 the public. One question about moving forward.
- 10 Has there been any contact, or is there
- 11 strategy to make contact with the new president
- 12 and his entourage?
- 13 MR. SPEYRER:
- We couldn't answer the representative, we
- 15 certainly -
- 16 MR. CALLAHAN:
- 17 Because I never heard any of that
- 18 conversation at all tonight. And that all
- 19 hinges on what Washington says. I appreciate
- 20 your answers.
- 21 MR. SPEYRER:
- 22 Thank you. Are there any other public
- 23 comments on the draft fiscal year 18 Annual
- 24 Plan? With that we will go ahead and conclude
- 25 this meeting. We certainly appreciate y'all

sticking around through both presentations this evening for as long as we've been. We certainly appreciate your support. Thank you. Have a great night. Drive safe. (This public hearing concluded at 8:18 p.m.)

__

REPORTER S PAGE

I, Tricia Gregory, Certified Court
Reporter, in and for the State of Louisiana,
the Officer, as defined in Rule 28 of the
Federal Rules of Civil Procedure, before whom
this sworn testimony was taken, do hereby state
on the record:

That due to the interaction in the spontaneous discourse of this proceeding, dashes (--) have been used to indicate pauses, changes in thought and/or talk overs; that same is the proper method for a Court Reporter's transcription of proceeding, and that the dashes (--) do not indicate that words or phrases have been left out of this transcript.

Also, any words and/or names which could not be verified through reference material have been denoted with the phrase "(inaudible)."

Tricia Gregory, C.C.R. #2015008

4 CERTIFICATION

I, the undersigned reporter, do hereby certify that the above and foregoing is a true and correct transcription of the stenomask tape of the proceedings had herein, taken down by me and transcribed under my supervision, to the best of my ability and understanding, at the time and place hereinbefore noted, in the above-entitled cause.

I further certify that the witnesses were duly sworn in by me in my capacity as a Certified Court Reporter pursuant to the provision of R. S. 37:2551 et seq. in and for the State of Louisiana; that I am not of counsel nor related to any of the counsel of any of the parties, nor in the employ of any of the parties, and that I have no interest in the outcome of this action.

I further certify that my license is in good standing as a Court Reporter in and for the State of Louisiana.

MR. SPEYRER:

If everyone could please have a seat we're going to go ahead and get started. First off, good evening. It's certainly a pleasure to be here with you on the Northshore, certainly an important part of coastal Louisiana. And we're excited to wrap up what has been a fantastic two weeks. We visited other parts of the state, having conversations with our coastal Louisiana citizens. And then sit down and hear the feedback, and the comments, the concerns, and the positives from you as we traveled around the state. So hopefully we saved our best for last as we are here in Mandeville tonight.

A quick run of what the agenda will be.

After I speak I am going to call up Chairman

Johnny Bradberry of CPRA and he will provide

some opening remarks as well. The Bren Haase

to my left, your right, who is head of the

branding for CPRA. He will give about a

twenty-five minute presentation going over the

draft of the 2017 Coastal Master Plan. After

that we are going to then accept your public

comments. We're going to ask you to please

1 limit your comments to three minutes, Zach will be sitting up her monitoring the time. He will 2 let you know when you get down to one minute 3 and when your time is up. We ask you to just 4 5 please be respectful of the others as we anticipate a number of public comments tonight. 6 7 And then after the public comment period Jason 8 Lanclos, the Deputy Executive Director with 9 CPRA will then come up and give a presentation on the draft fiscal year 2018. At that point 10 in time we'll take public comments on the 11 Annual Plan. And when we conclude we will 12 13 answer questions as best we can. Unfortunately we won't be able to answer your questions 14 15 during the formal public comment period. We 16 are certainly happy after the meeting to sit and have those conversations. So that's the 17 18 plan. 19 With that, one final comment I would like to say. For the fourth time we have done these 20 meeting we've got a live Facebook feed taking 21 22 place here. And while we've had, with 23 tonight's, close to 1,000 people attend our

four public meetings, we know more than 20,000

people across Louisiana have been able to view

24

25

the presentations as well.

So with that I will stop talking and introduce to you Johnny Bradberry, Chairman of CPRA.

MR. BRADBERRY:

It's really good to be here tonight. You know, this is the, this is the fourth of four public meetings that we are holding across the coastal area. And turnout so far has been really, really good, and it's good tonight.

And I'm excited to see, to see you. More importantly I'm excited to hear what your comments are relative to the Master Plan after you hear it.

But before I make any more, any more comments, let me recognize some elected officials that are here tonight. Senator Sharon Hewitt is here. And the senator, after I'm done, she wants to say a few words. So she'll come up here and she'll talk a little bit about, about the plan and tell you how she feels about it. How about that? Senator Jack Donahue is here. Jean Pelloat of Madisonville is here. Where are you, Mr. Mayor? There you are. Thank you. And Don Villere, Mayor of

Mandeville. You need to know that Don has been in our hair a little bit. He's been trying to push his product - not his product, but his desires, and he is working hard for you guys, I can tell you that. Here earlier were President Pat Brister of St. Tammany and Representative Reid Falconer. So, anybody else that I didn't recognize that might be an elected official I don't see anyone. Thank you for here? coming out. I think it's a testimony of how interested and how supportive they are of what we are trying to do and of you, the people that they represent.

Like I stated before, this is the, this is the fourth of four public meetings that we are going to hold. By law we are required to, to have three of these meetings. We've decided to have four this year. We feel like we have to take engagement of the public up to another level. And in fact after this fourth meeting we are also going to piggyback off of an NGO and have four additional meetings where we'll be present. It won't be as, maybe as formal as this, but we'll listen to the people, we'll listen to you, we'll take comment, and we'll

take that back and rationalize it. Really the purpose of this meeting is to get your input. So when you come up to the mic and you make a comment you're not going to get a response from us because we are out here to listen, one hundred percent to listen to what you have to say about what you're going to see tonight, and how you feel about your area, and how you feel about the plan, and what you see in the plan, what you don't see in the plan, and so forth.

You're going to see that this plan is not going to make everybody happy. You know? I'll look you in the eye and I'll tell you that straight up. There were 209 projects that were submitted for consideration in this Master Plan. It's a \$50 billion plan. Okay? Those 209 projects, however, okay, represent about \$150 billion worth of work. So in fifty years, which is the life span associated with this plan, we, we rationalize it - it doesn't make sense, we don't believe that we can raise \$150 billion. We feel like \$50 billion is a, is a target that we can get to. And so of that 209 projects only 120 projects got selected. Okay? Now, that leaves eighty-nine projects not done.

Good projects that are not going to get done
and not considered, at least this time around.

So you have some people that are going to be
real happy and you're going to have eighty-nine
groups of communities or people that are not
going to be happy. That's just the reality of
it all.

And this plan changes from year to year.

And so it doesn't mean that a, that a project that's not in the plan this five year interval won't get into it in the next. Our coast is so dynamic and it changes. And every five years, and every year - you'll hear Bren say that it changes every minute, every hour, every day, every month, and every year. So we see it as a framework, as a dynamic process, and projects could come and go. But, again, I'm here to tell you that there are going to be some groups that are not going to be happy and there are going to be 120 that are going to be really happy. Okay?

Now, the other challenge in front of us is how do we find, how do we find \$50 billion?

Well, I can tell you today, even with the BP spill, okay, and even with GOMESA money, the

Gulf of Mexico Energy and Security Act money coming to us as revenue, we don't have \$50 billion. We are way short, you know? The BP money is going to give us about seven, a little over \$7 billion, maybe close to eight if we get all that we want. GOMESA money, probably another, you know, five or six. Other streams of revenue that we identified might give us, you know, another five or six. So we are talking about, of the fifty billion that we need, probably we - I can identify a little less than twenty. So I've got to find \$30 billion in the next fifty years.

And so not only is CPRA responsible for putting this plan together, and showing it to you, and prioritizing projects, but we're also responsible for, like many others including representatives and senators, for finding that money and helping us find that money. We will do that.

So in closing I want to tell you that I encourage you to step up to the mic tonight, fill out a white card, give us your thoughts.

We're going to listen, we're going to take those comments back, we're going to rationalize

1 them. And this is a draft plan. If the comments that you have are strong enough, 2 logical enough, make sense, we're going to 3 rationalize them all and we're going to make a 4 5 decision as to whether or not we want to change the plan and alter it. And in, you know, in 6 7 2012 when the plan, the last plan was done, 8 there were some changes made after public, the 9 public comment period. So don't hesitate, I 10 really encourage you to do that. I am excited to hear those comments. And, you know, fill 11 12 out a white card and come on up. Okay? 13 So before I ask Senator Hewitt to come up here I want to make one more comment and that, 14 15 that relates to your governor. I need to look 16 you in the eye and tell you that you have a 17 coastal governor. This is a governor that 18 supports what it is that we're trying to do and supports the coast. He protects our money. 19 And believe me there are entities that are 20 coming after our money. A lot of it is really, 21 22 really protected and they can't get to it but 23 he is committed to making sure that BP dollars, 24 and donation dollars, okay, and the mineral

dollars - the revenue that we get from mineral

25

1 revenues across the state, stays to the coast. And, you know, he also is one that wants to be 2 fair. He's never told me, since I took this 3 job, he's never indicated to me - he says, 4 5 "Johnny, look. I need you to take this project over here in Terrebonne Parish, make sure it 6 7 gets done. Go talk to that legislator or 8 whomever, the local parish president, and make 9 sure that project gets done." That's not, that's not how he operates, ladies and 10 gentlemen, okay? He has basically said, "Let's 11 do what's fair." He laid out some things in 12 our discussions in establishing goals and 13 priorities and he basically is saying, "I want 14 15 you to make sure that you operate with a sense of urgency. We've got to get projects done. 16 17 Get some results, get things on the ground." 18 Okay? He wants to be fair in the selection process for projects and he wants us to assure, 19 20 to the best of our ability, that the money that we've gotten from the BP spill and the money 21 22 that's coming from donations, that \$18 or \$19 23 billion I talked about, let's try to keep it in 24 Louisiana with Louisiana contractors. Create 25 Louisiana jobs with that. And that is his

- 1 mission. So being fair, okay? Sense of
- 2 urgency, get results, and keep the money in
- 3 Louisiana. And that's his fundamental message.
- 4 And, you know, we're working hard to stay
- 5 focused on that.
- 6 Well, having said that, I'm going to ask
- 7 Senator Hewitt to come up and say a few words.
- 8 Senator.
- 9 SENATOR HEWITT:
- Well, it's great to see everyone here
- 11 tonight. This is such an important part of the
- 12 process, having public input. And Senator
- 13 Donahue and I are here because we, we care
- 14 about what you think and we want to hear your
- 15 thoughts. He and I represent most of St.
- 16 Tammany Parish, and I also represent parts of
- 17 St. Bernard, and Plaquemines, and part of
- 18 Orleans. So flood protection and coastal
- 19 restoration is very important to me and very
- 20 important to the people in this area.
- 21 And I've been very involved with a lot of
- 22 the work that CPRA has done. I'm newly
- 23 elected, I've been here a year, and I've been
- 24 asking a lot of questions of CPRA. I serve on
- 25 the governor's Advisory Commission where I have

an opportunity to ask questions and be part of their work. I also serve on the Transportation Committee which will ultimately approve the plan, and the Finance Committee which is going to help find the money.

And on top of that I'm an engineer, and so I spent a lot of time with them, even as recently as this week, going through the technical work behind it and the science behind some of their work, and challenging some of their assumptions to get comfortable myself that this is a well thought out plan. And so I want you to know, after all of that, I want to tell you that I have great respect for the work that they have done. This is a monumental task that we are taking on. And, you know, when you are fighting mother nature it's never easy. But they're looking at it from a, a very logical approach, it is very science-based. You know, we have very little history to go on so that makes it difficult. But I'm confident that they are going to continue, as we move forward in building our learnings into the models, so that we continue to get smarter and get better at what we're doing. And so, you

know, some of the message is tough to hear, and you guys are going to hear some of that tonight.

some projects I like better than others and you probably will too, but I'm very excited about the work that they're doing and I feel very comfortable with the plan for the next five years. And I know that things are going to change as we learn more and get better. But I think that we have a good plan and we've got great leadership. And so, you know, I'm very excited to have you here to be part of it. If there's anything I can do, of course you can call my office. And I look forward to hearing your feedback. So thank y'all for being here, I appreciate it.

MR. BRADBERRY:

Thank you, Senator. And don't take her comments lightly. She, she has really been in our business. Like she said, like she said, she's an engineer and she has asked some really good, tough questions, very probing questions. And she understands a lot of the technical stuff that's going into this. She has a good appreciation for the science. So I really

respect her opinion and her position on what we're trying to do. So, and we are open to having anyone, particularly legislators, work on a one-on-one basis to try to illustrate to them the importance of the plan.

All right. So let's get with it. We're going to ask Bren Haase to come up here and start his presentation. It will be about twenty-five minutes long. And after that, right after that we'll, we'll hear public comments. And after that, I'm sure some of you are probably not going to stick around, but we'll do the Annual Plan.

The Annual Plan is nothing more that a subset of the Master Plan. It's what we're going to spend, okay? What we're going to focus on in the next year. And we take a three year outlook for, for that Annual Plan. But it's to show you how much money we are going to be spending here in the next year and what projects we are going to be working on. And that's, that's fundamentally what - we are obligated to do that by law. And we will share that with you if you are willing to stay for a while. I don't know if you will after you hear

1 this next presentation.

2 All right. Thank you very much. Bren, 3 the floor is yours.

MR. HAASE:

Thank you very much, Chairman Bradberry.

Senator Hewitt, I appreciate those comments.

Thank you. It's good to be here tonight, it's a heck of a crowd. I'm proud of this crowd,

I'm glad you all are here, and it shows the dedication and interest you have with the issues facing coastal Louisiana. So I'm excited to get into it.

But if you'll indulge me I would like to take a moment, a personal privilege, if I may. As Mr. Bradberry mentioned this is our fourth, our last of four meetings like these that we've had over the last couple of weeks. So it's been a pretty busy time for CPRA as you might imagine. Just organizing an event such as this, but also in developing the plan. And so I would like to just recognize my team very quickly. And I haven't done this at any other meetings. So I promise I won't embarrass you too much. You can either raise your hand or stand up. Mandy, Melanie - Mandy is not

- 1 standing up, she's just raising her hand there.
- 2 Randy, Andrea, Zach, and Brett, and Nick. And
- 3 I think that's everybody, I'm certain I didn't
- 4 leave anybody out. But we owe them a debt of
- 5 gratitude for helping not only this meeting,
- 6 but the others that we've had to be well-
- 7 organized, run smoothly, and indeed for helping
- 8 us pull this document together and undertake
- 9 this, what is really a very daunting task, over
- 10 the last several years. So many, many thanks
- 11 to those folks, we appreciate it.
- So we're going to jump right into I. We
- 13 are the Coastal Protection and Restoration
- 14 Authority. We are the single state entity in
- 15 Louisiana mandated with developing,
- 16 implementing, and enforcing a comprehensive
- 17 plan to help restore our coast, restore our
- 18 ecosystems, and protect our citizens from storm
- 19 surges associated with hurricanes and tropical
- 20 storms. You all are well aware of this,
- 21 Louisiana is facing a crisis, a crisis of
- 22 immense significance. We have lost a
- 23 tremendous amount of coastal wetlands over the
- 24 last hundred plus years or so. Since 1932 we
- 25 have lost almost 2,000 square miles. And the

1 predictions for the future, if we don't do

2 anything about that, don't look a whole lot

better. You can see those land losses here.

Of course red is land loss in these maps, green

is land gained.

the rest of the nation.

So this is extremely important to us, and I know I'm preaching to the choir here when I say this, but Louisiana is a national treasure. It is important for us to save what we can of our coast for a number of different reasons, not the least of which, more than two million people live along coastal Louisiana. And I'm not going to go through each of these, but in terms of fisheries production and water fowl production, commerce, transportation, and so forth, Louisiana provides tremendous service to

And we're investing in our coastal economy now as we speak. These are just a few examples. But if you look at the port of Lake Charles, the amount of investment that's going on over there in recent years, about \$100 million or so. You can see the impact that has on jobs in that area. Port Fourchon, of course, immensely important in terms of energy

production for the, for the country. And then
when you look at the economic impact associated
with the deepening of the Mississippi River,
certainly you see the value of coastal
Louisiana and why we are worth fighting for.

Again, there are some other stats that you see listed here. I'm not going to go through all of these. But the economic impact and service we provide to the rest of the nation, indeed the rest of the world, is immense. All of this information is part of the draft Master Plan, and, again, is hopefully a tool that you all can use as you are making a case for coastal Louisiana, whether that be in Washington, D.C., or with - the example I give is if you have a friend who is coming down here from the Midwest and wants to know why it's important to save these wetlands that he's fishing in. You can refer him to, to some of these numbers.

And so a tremendous amount of work has been done in recognition of this, of course, over the last decade or so. You see the stats associated with that here, but \$20 billion has been secured. Much of that has been invested

- 1 in projects that are on the ground today.
- 2 Projects like coastal restoration projects,
- 3 ridge, and risk reduction projects. 120
- 4 million cubic yards of dredge material has been
- 5 dredged to do things like build our barrier
- 6 islands, our marshes, coastal ridges, and so
- 7 forth. And that's benefitted over 36,000
- 8 coastal acres of coastal wetlands. 282 miles
- 9 of levees have been constructed or approved.
- 10 Again, over the last decade roughly sixty miles
- 11 of our barrier islands or shorelines have been
- 12 constructed or are even under construction as
- we speak.
- 14 This is just a, a representation of where
- 15 those projects, most of those projects this
- 16 is not an exhaustive list. But most of those
- 17 projects have been constructed. You can just
- 18 sort of see the distribution across the coast.
- 19 And we're turning dirt today. So this is not
- 20 something that we're stopping doing, it's not
- 21 something we would consider slowing down. As a
- 22 matter of fact we're ramping up as we think
- 23 about these projects. So Bayou Bonfouca, a
- 24 project not too far from here, is under
- 25 construction right now on the Northshore.

- Shell Island West, Lost Lake, Oyster Bayou,
 these are all projects where we are turning
- dirt today. And certainly the intent is to do
- 4 that, as well, in the future. In the Annual
- 5 Plan presentation that Mr. Bradberry mentioned
- 6 just a moment ago outlines \$660 million worth
- 7 of investment in our coast in terms of
- 8 implementing projects, again, related to, or
- 9 very similar to these restoration projects and
- 10 risk reduction projects to help restore our
- 11 coast and protect our citizens.
- 12 So what is the Coastal Master Plan? I get
- 13 this question a lot, what is it? It's a big
- 14 document, of course, it's a book, it's a -
- 15 it's also a methodology or a means for us to
- 16 make, frankly, some hard decisions. The -
- 17 there's no, there's no right answer to the
- 18 question of how we solve the coastal land loss
- 19 crisis. There's no optimal solution. And
- 20 depending on who you are your perspective might
- 21 be much different. And so you have, you know,
- 22 209 projects worth \$150 billion that Mr.
- 23 Bradberry mentioned earlier. How do you select
- 24 the right ones? How do you know you're
- 25 selecting the right ones? The Master Plan

really is a process to enable us to try to make sense of all that and hopefully select the projects that can do the most good for coastal Louisiana.

But at the end of the day it's a list of projects. There's a list of projects in the Master Plan and those are the projects that the state believes it should invest its dollars in, again, to do the most good for our coast.

So why do we do another plan? First of all, it's required by law to do another plan. And I think it's, it's for good reason. And it's really, it's that second and third bullets that are good reasons. You all are well aware, better than I, that our coast is an extremely dynamic place, it changes week to week, day to day, even, and certainly year to year. And so as that landscape changes our techniques and the things that we believe that we can do for the coast changes as well. And so to think a plan that we develop today is necessarily appropriate, the appropriate plan fifty years from now is probably not that good of an assumption.

So in addition to that I mentioned all the

Well, we've learned a tremendous amount from implementing those projects. We've learned how to stretch our dollar farther, we've learned how to build projects better, we've learned how to do things in a way so they last longer in terms of building projects. We want to incorporate that knowledge into our projects as we move forward, of course. So being able to react to those changes, improve technology,

improve science, is an important piece of us

updating the plan every five years. And it's

advance that comprehensive plan get integrated

what enables us to do that so that we can

work that has occurred over the last decade.

certainly, in risk reduction and restoration.

So some of the differences about this plan from the 2012 plan? You see listed here first of all, we've taken a hard look at that science and technology that was used to develop the 2012 plan and used to implement the projects since 2012. And we said, how do we get better, what do we do, what is it that we can do better in terms of the tools that we use to evaluate projects, the engineering behind those projects, how they might be built, and so

forth. And so the ink rally wasn't dry on the 2012 plan before we began to do that. And many of those improvements have been incorporated in the process that has been used to develop the draft plan that you see here, that you will see here - what you have already seen here tonight.

We have incorporated some new ideas and information. I've touched on that a little bit already, but for the 2107 plan we actually made two public calls for new projects. We don't believe we have all the right answers, all the, all the perfect projects. So we asked you, what are the projects you want us to consider as part of 2017? Again, there were two calls made for those. (Inaudible) responded to and many of those projects were evaluated for consideration in the 2017 plan and certainly many of those have made it into the plan as well.

There's an increased focus on flood risk reduction and resilience in this plan and you'll see that reflected in the non-structural program primarily as you look through the documents. And I'll discuss it in a little bit

more detail in just a bit.

There's an increase in emphasis on our communities, and really what our coastal land loss situation, and the situation with being able to restore some of that land means to our communities, means to the people that live on our coast, which is, after all, why we're doing this work in the first place, right? So you'll, you'll see that highlighted in what we call Appendix B, the People and Landscape, where we discuss issues like how does land loss affect our ability to insure our homes and things of that nature. So I encourage you to take a look at that if you haven't already.

We've expanded our outreach and public engagement. I'll get into that in a little more detail this go around. And one of the things Mr. Bradberry mentioned is funding. So we've been able, we've got a little clarity in terms of the funding coming to the state in order to implement this plan and these kind of projects as a result of some things like the BP settlement, GOMESA, and so forth that are coming to the state. So that in conjunction with the idea that we have a tremendous sense

of urgency in terms of needing to get these
projects done, money now is better that money
later. Projects now are better than projects
later in general. You know, we've been able to
move some of the funding up in the planning
cycle, if you will, to try to begin those
projects now rather that later.

8

14

15

16

17

18

19

20

21

22

23

24

25

So in terms of the objectives of the plan. You see those listed here. Again, we want to protect our citizens from coastal flooding and from those floods associated with hurricanes and tropical storm surges. We want to harness the natural processes that helped build coastal Louisiana in the first place. And we want to provide coastal habitats that are important for recreational and commercial activities. also want to preserve, help preserve, our cultural heritage to the, to the best extend we Certainly that heritage in intricately intertwined with our coastal wetlands. that's something that's very important to us. It's one of the reasons many of us live in this part of the world, of course. And we want to make sure and preserve that to the extent possible. And I think Louisiana's coast, like

no other, is really a working coast. It's not just a place we visit on the weekends, although certainly we like to do that and encourage those kind of things. It's a place where we, where we live, a place where we work and live.

20

21

22

23

24

25

So in terms of developing the Master Plan. This is a, sort of a schematic of that process. And it starts with the projects. I mentioned a call for new ideas for new projects that was made. So we'll start there. So this is a map that shows the projects that were evaluated for potential inclusion in the 2017 draft plan. One hundred thirty-five of those were restoration projects, fifty-four of those were non-structural protection projects. When I say non-structural I should go ahead and define that. We are talking about raising, elevation of homes, flood-proofing of businesses, and voluntary acquisitions where that might be appropriate. And then twenty structural protection projects which is what we are much more familiar with in terms of levees, flood gates, flood walls, and those kind of things.

So there's 209 projects listed here as Mr. Bradberry mentioned earlier. If you, if we

implemented every one of these projects the price tag estimate for those at this point in time would be about \$150 billion. We know that's simply not realistic in terms of money that might be coming to the state over the next 150 years. And so again, the Master Plan process is the, is the means through which we can wade through that \$150 billion of projects and pare it down to something we think is more reasonable, which is roughly in the \$50 billion range. And I'll get into that in a little more detail in a bit.

So we have to evaluate those projects in some way. We do that through a suite of predictive models. I will not get too into the weeds on this but there are a couple of pieces of this that are integrated models that you see listed at the top, top left-hand side of the slide there. And this is really where we ask the questions; how do the projects, how does the plan affect things like where the water moves across our coast; what's the salinity of that water; what happens to the vegetation around that water, does it change, does it die, does it sprout? What happens to sediment?

- 1 Sediment is immensely important, of course.
- 2 But how does the sediment move? Does it erode,
- 3 or does it deposit, or does it help build
- 4 levees? Those kind of questions. What happens
- 5 to our fish and wildlife species that are so
- 6 important to us all?
- 7 But there's also a second piece to that
- 8 and that's the storm surge and waves piece,
- 9 sort of the risk assessment model where we do
- 10 look, again, at how those projects affect storm
- 11 surges and wave heights. And then how we
- 12 translate that into risks around communities,
- which, again, is so immensely important to us.
- 14 So we do that over a range of
- 15 environmental risk scenarios as you see. The
- 16 factors that will be affected you will see
- 17 listed over there to the right side of the
- 18 slide. So we organized the outputs from those
- 19 models through a planning tool. And there are
- 20 two real primary drivers that impact whether or
- 21 not a project is selected for inclusion of the
- 22 draft plan. One is how much can those projects
- 23 reduce flood risks and how much can those
- 24 projects build and maintain land? And so those
- are our primary, what we call, decision drivers

and you see those listed here at the top of the slide.

But we also recognize that we have to interject some reality in this plan, right? And so it is a constraint plan. And we've touched on this a little bit already in terms of funding, right? Most of us are constrained by funding in our daily lives. And indeed we are as part of this plan as well. We don't have all the money in the world to implement all the projects that we would like to and that we think the citizens of our coast deserve. The question becomes how do you select those projects that can do the most good?

We also have some real limitations in terms of our natural resources. So sediment. The sediment deficit across most of Louisiana is really the fundamental problem, basically it is at the root of our land loss issues. But we don't have all the sediment in the world that we would need to implement, again, every project that we would like to. There's not all the fresh water available or nutrients available for that matter, either. And so those constraints are factored into our project

selection process.

But those, you know, I mentioned the two decision drivers being the kind of primary factors of ours to select projects. They're the things that we know are really, really important to us and to you, to our coastal citizens. And those decisions can be measured through the metrics you see listed on the right-hand side of the slide there.

So we have a group of community metrics and a group of environmental metrics. So this is when we can ask questions like, how does the plan affect traditional agricultural communities, or traditional fishing communities, or oysters, or shrimp, or saltwater fish? And those kind of things. Being able to look at those metrics allows us to, to look at the output of the plan so we can see the result of the plan through some of those different pieces.

So that was sort of the science, technical piece of this. But certainly we recognize that we need to be responsive to our, our coastal communities. And we know that that scientific, sort of technical process, is certainly not

perfect. It doesn't produce the best answer every time. And sometimes its not always as responsive to our communities as perhaps we need to be. And so that's one of the reasons we're here tonight and that's one of the reasons we have a draft plan that leads to a final plan that incorporates public comments such as what we'll hear tonight.

So a piece of that being responsive to our communities, and this is kind of one of the first parts of that, is the increased outreach that we discussed just a bit ago. Again, I will not go through each of these numbers but I will just point out that this represents over 150 opportunities for us to speak with you about the plan, about the developmental process for implementing, for developing the plan, and to get feedback from you and have you be able to ask questions from us about this.

One of the pieces of this I will point out is pretty unique, I think. It's something that we haven't done before and with CPRA I think was very effective were those community conversations that you see listed over on the left-hand side of the screen. So we were able

to partner with some of our NGO partners to 1 coordinate these meetings. And they weren't a 2 typical setting such as this where I'm getting 3 up and speaking to you and you're giving formal 4 5 public comment. It was an opportunity where we were able to serve dinner and sit around the 6 7 table from each other, have dinner, and discuss 8 these issues and discuss what it is in the 9 Master Plan that you most like, what some of 10 the projects perhaps you don't like. And how the coastal issues in general affect all of us. 11 12 And so very, very - I think it was a very 13 effective way to get some rather meaningful feedback and have some really good discussions 14 15 about these kinds of issues. And it's a model, I think, that we are going to continue to 16 follow into the future. 17

So lastly - I moved forward a little too quickly. So this is just ramping up. So this is 150 or so opportunities over the last, you know, two and a half, two years or so. And certainly as we move, we move forward through the release of the draft plan in the future we are, we are going to be having many, many more of these opportunities for engagement.

18

19

20

21

22

23

24

25

1 So we're going to get into some of the results for the plan, the outcomes of the plan. 2 But before we do that I want to talk about some 3 key decision points. So we mentioned the 4 overall funding constraint of dollars earlier. 5 And we alluded to it already, but the 6 7 constraint that we selected for the development 8 of this plan and indeed what we selected in 9 2012 was that \$50 billion figure. That's an, that's an amount that we think is reasonable to 10 come into the state over the next fifty years 11 or so. And, again, it's a constraint through 12 13 which we plan. It's not what we hope to get. We certainly hope to get 150 or even more to do 14 15 more projects and do more good for our coast. But we think that's a realistic constraint 16 within the plan. And I already mentioned 17 18 funding in terms of (inaudible).

The split, in terms of how we expend those dollars within the plan between restoration projects and risk reduction and protection projects is roughly 50/50, or \$25 and \$25 billion for each. That's not just an arbitrary split. We did do some analysis and looked at expending additional dollars for restoration,

19

20

21

22

23

24

25

for example. And what, sort of, the costbenefit was in terms of expending those additional dollars. And it turns out that sort of sweet spot is about the 50/50 split so we're doing that again.

1

2

13

14

15

16

17

18

19

20

21

22

23

24

25

In terms of future scenarios, I touched on this just very briefly. And the first that is taken as part of the 2017 Master Plan is that we think it is a conservative approach and we are planning for pretty dire conditions. You've seen that already in some of the red and green maps and you'll see it again here in just a minute. Because if we plan for that worst condition, if we plan for that pretty dire condition in the future and we don't experience that, we experience something less than that, then we have expended dollars wisely and we're, frankly, ahead of the game, as it were, in terms of our approach to restore the coast and protect our citizens.

It's important to not that we are going to update this plan every five years. So if we see that those predictions are not wrong we are able to react one way or another to some of those things. And so that's good news.

And then in terms of results, we'll talk about a fifty year plan. We certainly know we need results and benefits on the ground now. Those future benefits are immensely important to us. We also want to make sure that we are spending our dollars wisely and responsibly so that we can ensure that our children and our grandchildren, frankly, are experiencing the benefits of hopefully a healthy coastal system.

So let's get into the plan. This is the, this is the map. And I hope you had a chance to take a look at this before you sat down this evening. This is - we'll take a little bit of a closer look, but this represents 120 projects and represents 802 square miles of land that we wouldn't have otherwise without implementing the plan. It represents flood damages reduced by about \$150 billion over the fifty year period.

So we'll take a little bit of a closer look in the western, central, and eastern part of the state. We'll start with west. You'll see green areas here, those are marsh creation projects. There are a number of different project types, again, that I will get a chance

- 1 to look at. And part of it documents
- 2 hydrologic restoration projects and structural
- 3 protection projects, ridge restoration
- 4 projects, shoreline protection projects, and so
- 5 forth. And you'll see many of those same types
- of projects across the coast.
- 7 As we move into the central part of the
- 8 coast you do. But you're starting to pick up
- 9 some of the barrier island projects as you move
- 10 over here. Also the Atchafalaya River. And of
- 11 course it's in this area where we start to
- 12 include some of the sediment diversion
- 13 projects.
- 14 And then as you move further to the east
- 15 toward the eastern part of the state you see
- 16 more of this. Certainly the Mississippi River
- 17 is over in this neck of the woods, and is a
- 18 tool that we believe is a cornerstone for
- 19 helping to restore our coast in the
- 20 Pontchartrain (inaudible).
- 21 So a little closer look at the non-
- 22 structural projects that we mentioned. There
- 23 were thirty-two of those that were selected as
- 24 part of this project. Roughly there's an
- estimate of 26,000 structures that might be

included as part of this program at a cost of about \$6.1 billion over the next fifty years. So I would just highlight that the number of structures is a very rough, kind of a high level planning estimate. And certainly that number needs to be refined. And as we move into implementing any of these projects our first call, without a doubt, would be to the President Brister or the local community and to help develop that program and how it might be

implemented.

In terms of funding by project type in the plan, you can see the breakdown here. About twenty-five, as I mentioned \$25 billion for risk reduction projects, and you can see the breakdown there between the structural protection and non-structural protection projects. And you can see the project types on the other side of the slide there for restoration. One of the things I want to point out, this is one of the things we heard between the 2012 plan and now, is that we need, again, you know, we have a sense of urgency. And certainly we believe we do. We need to get projects on the ground now, we need to dredge,

we need to dredge, we need to dredge. And I
would say that we are and we plan to. If you
look at the dollar figure associated with
dredging projects versus others such as the
sediment diversion projects, it's the single
largest expenditure as part of this draft plan.

So we're going to look at some of the outcomes of the plan in terms of what the, what the landscape might actually look like with the plan in place. We do this with a little bit of a time lapse. Look here. If you look at the top, right-hand corner of the slide there's a cover and there will either be a red X or a green check. So if you see a slide with red X that means a future without action, or a future without the plan in place. If you see that green check, of course, that means what the future might look like with the coastal plan, what it might look like with the plan in place.

Well, we're first going to look at year thirty. Again, this is a future without action. Red is land loss, green is going to be land gained or land maintained. But essentially it is land that otherwise would not be there but for the, but for the plan in

place. And so we see with the plan in place what the landscape might look like at the year thirty time period.

Look out at year fifty as well. So here's year fifty without the plan in place. And year fifty with the plan in place. And, again, you can see the green spots showing up on the map in addition to - or more of that green showing up in addition to what was in the previous maps.

So what does that mean in terms of absolute numbers? Well, what it means is that we think at the end of fifty years we'll have 802 square miles of land that we wouldn't have otherwise without implementing the, the Master Plan. So it's 802 acres at the end of fifty years.

So we'll look at some flood depths and how this changing landscape affects those flood depths. Obviously this is something that is immensely important to us. And this is really where the loss in landscape translates to how it affects us at home in terms of what those flood depths are. So, again, this is twenty-five year, excuse me, at year twenty-five for a

hundred year event. That is an event that has a one percent chance of happening in any given year. This is without the plan. The scale you see here may be a little hard to see. But the blues are one to three feet, the greens are four to six feet, the yellows are seven to nine feet, the orange color is ten to twelve feet, red is thirteen to fifteen feet, and purple is over fifteen feet. This is, these are flood depths at year twenty-five, twenty-five years from eventually now with a hundred year event without the plan in place.

And then we look at the depths with the plan in place. And I know it's hard to see the difference between those two and so we are going to show you the difference on the map.

And the take home message here is that the greens and blues, essentially, on this map are reduced flood depths as a result of implementing the plan. So those greens and blues are essentially good things, those are good things on this map.

So we'll look at the same thing for the fifty year time frame. This is without the plan in place. Then fifty years with the plan

in place. And then we'll look at those
difference maps again and see, again, the
greens and blues on the map which are reduced
flood depths as a result of implementing the

Master Plan projects.

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So, again, let's talk about absolute numbers. What does that mean? The way we measure reduced risk is through expected annual damages. And so you see out at year fifty we think that with the plan in place we will reduce expected annual damages by about \$8.3 billion. It's important to note that's an annual number so that's the number at year fifty. And I mentioned the \$150 billion earlier. If you look at the cumulative amount of damages over the fifty year period of the Master Plan implementation, that's, that's reflective of roughly that \$150 billion of reduced damages. Again, for the entire plan it's about at 3:1 return on investment.

So what does the plan deliver? First of all we've got a lot of good projects in this plan. In roughly 120, you can see the breakdown of those projects listed there. I didn't touch on it in great detail but we do

benefit the ecosystem. So in terms of impacts
to fish and wildlife, and vegetation, and so

forth, by and large, implementing the plan, the
future with the plan in place is, is better
than it is without the plan in place where most
of those resources are concerned.

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Again, we mentioned earlier that we reduced risks to the tune of about \$8.3 billion out at year fifty. And we know that we build and maintain land with this plan. Again, to the tune of about 802 square miles of land out at that fifty years. And we know that this plan gives us time to prepare and adapt. So as was mentioned earlier, those red maps are not real pleasant, they're not, they're not very exciting, they're not things that we tend to look forward to. But if there's a, you know, some good news associated with this, again, we do know that we can create a significant amount of land of the next fifty years. And, you know, based on the predictions that have been made in developing this plan, things don't tend to get sort of really bad, if you will, until you get out into that longer time period.

So we've got time to adjust to that if

1 those predictions are, in fact, come true. we have time to adjust to them if they aren't. 2 And so, again, the key here is to identify 3 those investments that the state can make that 4 are sort of the no-brainer investments. 5 that we know we can do right now that can be 6 7 robust over that perhaps dire, or perhaps good future looking forward, and that can do the 8 9 most good for our coast.

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And then lastly I'll mention that I think we can provide some economic development opportunities for our coast which is really, really important. Not only is a healthier, more sustainable coast, you know, invite that sort of investment and invite that development, but we're really at the tip of the spear in Louisiana in terms of dealing with these kind of issues. Coastal land loss is not anything that is new to Louisiana and certainly our land has been sinking for ages. And so we've been dealing with these issues for a long time. if some of these predictions hold true many of the other parts of the country are going to be dealing with them in a similar manner that we are. We're doing it first. We're developing

methods to, to adapt to those changes and to
deal with these issues before many other parts
of the country are. And we think that's an
exportable commodity and, frankly, something
that we're leading the country in. And so
that's something that could be a good thing.

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

In terms of how to get more information. I hope you were able to access all the information you wanted tonight. Certainly if you didn't and you want to really dive into things our website is a tremendous source of information. Coastal.la.gov. The links that you see listed over on the right-hand side of your screen there, are - there's more information there than you care to shake a stick at. There's over 6,000 pages of documentation. If you want to know how we figured a project might affect juvenile brown shrimp, or traditional fishing communities, or whatever, you can find it in these documents. And so I would encourage you to go to our website and take a look at those if you're interested in those things or if you happen to suffer from insomnia.

In terms of fact sheets, we have these

available as well. This is something new for 2017. Here, of course, is an example of the St. Tammany Parish fact sheet, and we have this for all of our coastal parishes. If you're interested just in what's going on in your neighborhood, in your parish, in your neck of the woods, you can go to these fact sheets, take a look at vital stats in terms of what the future might hold for your parish without the Master Plan. And then the flip side shows the number of projects we intend to build, where they are, and what the future might hold with the projects on the landscape within that parish.

And we've got simpler fact sheets for each project. If you're just interested in looking up some details about an individual project you can do that as well in these. And all of them are available on our website. And another thing that is available on our website is a Master Plan data viewer. And that was available here tonight, so hopefully you had a chance to look at that. This is a really great tool, I think. It's an interactive tool. You can go into this viewer, you can type in your

address and assess - it will tell you what
your estimated flood risk is today, what it
might be in the future without the plan in
place. You can see the impact of projects on
the ground, or not being on the ground as well.
So this is a really neat tool. I hope it is
something that you will find useful.

In terms of our process from now to the final plan. The final draft plan was released back on January third, we are on the twenty-fifth now in these public hearings. The public comment period lasts through March twenty-sixth so we've got a lot of time to hear public comments. Certainly we'll hear many tonight. But if you speak tonight and you forget to add something there's a number of venues for you to be able to comment. Nick will get into those here in just a minute. But most of those can be found on the website as well.

In terms of how we will be presenting our final plan. And certainly we will be incorporating, contemplating, and considering the public comment that we hear. Ultimately we will incorporate as much of that into the final plan. Then it will be presented to our board,

the Coastal Restoration Board on April
nineteenth. And then the final plan will be
submitted to the legislature on April twentyfifth if approved by the board. And then the
legislature will have a chance to vote as well

to approve it or disapprove it.

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

This is the flier that was used for the public hearing. And with that, I want to open it up to the public comment period and I'll call Nick back up here. I want to add one thing before we get started, I guess. that's something that Mr. Bradberry alluded to earlier, is that we recognize this isn't a perfect process, this isn't a perfect plan. There are a lot of good things in this plan and there are a lot of good things that aren't in this plan. And so we want to hear from you. We want to hear what you think is good and we want to hear what you think is maybe not so good. I think it's important for folks to remember that first thing that I said, we want to hear what you think is good as part of this plan because as we're making deliberations, you know, as we're getting drawn toward a final plan, as changes are made, you know, it's going

- 1 to affect, it's going to affect the chess
- 2 pieces, essentially, on the board. And so it's
- 3 not only important for us to see, perhaps,
- 4 those things you might like to see that aren't
- 5 in the plan, but also hear from you in terms of
- 6 what you think, you know, is good.
- 7 I appreciate your time. I'll be quiet now
- 8 and let Nick get to it.
- 9 MR. SPEYRER:
- 10 Thank you. All right. So now it's going
- 11 to be our turn to hear from you. We're about
- 12 to start our public comment period. The public
- 13 comments we hear tonight are certainly of
- 14 critical importance and we look forward to
- 15 hearing from you. But if you are unable to
- 16 provide public comments tonight or would like
- 17 to provide more detailed comments, you
- 18 certainly have that opportunity and that option
- 19 between now and March twenty-sixth. Best way
- 20 to go figure out how to do it after this
- 21 meeting is to go to our website coastal.la.gov
- and you'll see to the options. And those
- 23 options include sending us an e-mail to
- 24 masterplan@la.gov, there's an online form
- 25 through the website that you can submit your

public comments, and then you can also provide 1 hand written comments and then mail those in to 2 our office. All of those avenues, public 3 comments will be weighted equally. And then I 4 5 will let you know every comment we receive tonight, we are not just taking good notes and 6 7 thinking about - we also have a court reporter 8 here that will document each and everyone of 9 the public comments we hear tonight. All of 10 the public comments received through these formal channels will then get documented in the 11 appendix for outreach and engagement, Appendix 12 13 And we will synthesize and summarize what we heard and what we did with the public 14 15 comments during this public comment period.

As far as tonight goes, you will see it on the slide. We are going to ask you to please respect a three minute time limit. Zach has joined me here, he'll keep time, and he'll let you know when you get to a minute and when your time is up. We just ask you to wrap your comments up at that time. And what I will do is, if you are planning to speak tonight - I've got a stack of cards, but certainly if you haven't been able to fill out a form and you

16

17

18

19

20

21

22

23

24

25

- 1 are so inclined to do so now, raise your hand.
- 2 We've got a few folks around that can pass a
- 3 card out. We can get you to fill those out.
- 4 They will bring them up to me and then your
- 5 name will get called during the meeting as
- 6 well.
- 7 So with that let's go ahead and get
- 8 started with our public comments. We will
- 9 start with Sean Turner. And Sean, we would ask
- 10 you to please come here. Sean, state your
- 11 name, whatever you do, if you're representing a
- 12 specific organization we would ask you to do
- 13 so. And then on deck following Mr. Turner will
- 14 be Harold Schoefller.
- 15 MR. TURNER:
- 16 Hi, I am Sean Turner of Vanishing Paradise
- 17 Pro Staff. I am thirteen years old and I've
- 18 been coming to these meetings since I was nine.
- 19 Yeah, quite a long time. I have fished the
- 20 Louisiana coast from Biloxi Marsh, down to
- 21 Venice, over to Cocodrie, and all the way to
- 22 Big Lake. I have seen islands disappear. I
- 23 have seen projects built up. There has been a
- 24 lot of work done but there is still a lot much
- 25 left to do. My friend, Mr. Paul Salvant, the

- bug man, asked me to tell you not to give up on Grand Isle. He just dumped \$16,000.00 worth of
- 3 sand on his lot on the bay side of the island
- 4 because it keeps sinking, but he is not giving
- 5 up. He wants his grandkids to fish and crab
- 6 the beach fifty years from now.
- 7 We are glad to see these big diversions
- 8 finally and ready to roll. I have I really
- 9 look forward to seeing work start along the
- 10 Mississippi River, reintroduction into the
- 11 Maurepas Swamp project. Like I said, I love
- 12 salt water fishing, but I do not want to do it
- in my back yard in Ascension Parish. Thank
- 14 you.
- 15 MR. SPEYRER:
- 16 Thank you. Harold. Then on deck will be
- 17 Chris Macaluso.
- 18 MR. SCHOEFFLER:
- 19 Harold Schoefller from Lafayette, Chairman
- 20 of the Cajun Group of the Sierra Club. I am a
- 21 duck hunter, a fisherman. I have been very
- 22 involved in the coastal zone all my life. I
- 23 spent the day in the marsh yesterday. I have a
- 24 couple of concerns. What an awesome task when
- 25 I look at Louisiana and those of us who lived

it when it was, you had clouds of ducks and
clouds of geese, and if you pull the trawl more
than fifteen minutes you would sink the boat.

And I have watched all these changes. The
tarpon disappearing, rabbits and deer from the
marsh. And we don't have clouds of ducks

anymore. So a long list of impacts that's occurring. Shrimping industry has just almost disappeared completely. What an impact.

so what a daunting task, and I commend everyone who is working on it. It is certainly a tough situation. One of the big concerns we have is public/private. Our coastal zone is privately owned, the only state in the country the coastal marshes are privately owned. And those private land owners are invariably a partner in the decision making process and what happens on their land, as they should be. The question is, can you spend public money on private land? I don't know if you can answer that in the affirmative.

And the next is, these private land owners have posted signs everywhere. The waters are posted. People are getting arrested in natural waters, in the bays and so forth. It seems

that the public is facing trespass signs, but the public dollars that would enhance their properties are not faced with the trespass signs. So I have a real problem with that.

1

2

14

15

16

17

18

19

20

21

22

23

24

25

The other big issue is this is of an enormous undertaking to protect a vital part of our country. It certainly should be subject to the National Environmental Policy Act. are many players in this game that are not at the table, shrimpers who are heavily impacted. We take our public lands like our wildlife Marsh Island has thirty-nine dams on reserve. it, Rockefeller has eighty-five percent of their properties totally removed from tidal exchange, and you can go to (inaudible) and you can go to Sabine Beach, Cameron, those areas. The White Lake, Grand Lake reservoir is totally controlled, so we have controlled waters. That's is a super negative in terms of marsh land loss. When you look at a aerial of Rockefeller, and you see all of the square lakes, the good lord didn't make one square lake. That is man's intervention in the wrong way.

So another part of this should be looking

- 1 at how we manage those public resources. White
- 2 Lake, should it be subject to tidal exchange?
- 3 Bring these things into this whole process of
- 4 marsh restoration. Thank you.
- 5 MR. SPEYRER:
- 6 Thank you, Mr. Harold. Chris Macaluso,
- 7 and then up next will be Allison DeJong.
- 8 MR. MACALUSO:
- 9 Thank you, Nick. And thank you Bren, and
- 10 Johnny, and everybody for putting this together
- 11 for the CPRA staff. I've been there. It is a
- 12 daunting task to, you know, spend this much
- 13 time away from your family and come out here in
- 14 the public, but it is part of the process and
- 15 we really appreciate it.
- 16 I've got a couple. First off, I am the
- 17 marine fisheries director for the Theodore
- 18 Roosevelt Conservation Partnership. Between
- 19 the release of the last plan and this plan, my
- 20 organization, working with several other sport
- 21 fishing organizations and conservation groups,
- 22 put together a host of workshops to talk about
- 23 the kind of projects we wanted to see come from
- 24 the BP settlements, and you know, this plan
- 25 contains a number of those. So, thank you, I

1 know you guys were listening.

2

3

16

17

18

19

20

21

22

23

24

25

I have got a - one concern I would like to bring up. And certainly I will be submitting written comments on behalf of our organization and hopefully some of our partners. But one concern I do have is, you know, I know that flooding in St. Tammany, Tangipahoa, St. John, St. James is an enormous concern. I know a lot of that comes from Lake Pontchartrain. One of the ways that this plan recommends addressing some of that flooding is by establishing weirs and gates across Chef Pass and across the Rigolets. I fish Lake Pontchartrain a tremendous amount. It is an incredibly productive fishery and estuary producing an enormous amount of blue crabs, white shrimp, mullet, menhaden, and all of those things are important, not just for the fish in this estuary but beyond, in the Breton Sound, Mississippi Sound and some of those marshes.

I just want you guys to be aware. I know in reading the description of those projects that there is thought given to make sure that those tidal exchanges continue to take place.

Cutting off that tidal exchange, I think, would
be very detrimental to the fisheries production
of this ecosystem. So, just keep in mind. I
know those projects are not right around the
corner, but just be conscience of the fact that
we have to make sure that we get the tidal
exchanges to continue to take place here.

8

9

10

17

18

19

20

21

22

23

24

25

One other thing I wanted to bring up. of the groups I work with called me and said every time he reads a newspaper article about the Coastal Master Plan it says that fishermen are against diversions. Fishermen are not against diversions. I work with - some fishermen may be, but I work with the biggest sport fishing organizations in the world, and none of them are against diversions. In fact, they are for diversions. And there is tremendous benefit in fresh water fisheries and salt water fisheries. The fisheries production by limiting saltwater intrusion and bring back the grass of submerged aquatic vegetation, and we see it in this basin right here.

The fishing in the Lake Pontchartrain basin right, now after a year of inundation with fresh water. The salt and fresh water

- 1 fishing from a recreational fishing perspective
- 2 I am not sure I have seen it any better and
- 3 I have been fishing out here almost two
- 4 decades. So this fishing is tremendous and a
- 5 lot of that is thanks to the interaction of
- 6 fresh and saltwater, and the re-establishment
- 7 of establishing the natural barriers to keep
- 8 the salt water from coming in too far. So
- 9 those are my comments. I will submit more in
- 10 writing, but thank you very much.
- 11 MR. SPEYRER:
- 12 Thank you, Chris. Allison. And then up
- 13 next will be Stephen Champagne.
- 14 MS. DEJONG:
- Hi, good evening. My name is Allison
- 16 DeJong. I am the senior water manager at
- 17 Propeller in New Orleans where we support small
- 18 businesses and entrepreneurs in the water and
- 19 coastal space. Just want to echo thanks to
- 20 CPRA and Chairman Bradberry and everybody for
- 21 putting this together. What a daunting task,
- 22 indeed, to prioritize all the stuff.
- I want to thank you for prioritizing the
- 24 diversions in particular. We agree that those
- are very much needed and have the best chance

- at building the most land over the long haul.
- 2 And we support front-loading those as well.
- 3 But I do want to echo one thing that you
- 4 mentioned, which was local procurement. I
- 5 think that this is a really important issue for
- 6 maximizing the knowledge and benefits that we
- 7 get out of the plan. If you look at the in
- 8 the back of the plan at who developed it. It's
- 9 like a who's who of Louisiana scientists and
- 10 citizens. I am so proud that everyone in our
- 11 state all of our brilliant people here
- 12 worked on it to make it such a wonderful
- document, and to implement it the best we can
- 14 in the most innovative and cost-effective ways.
- 15 I think we really need to focus on making sure
- 16 that out local small businesses who can compete
- 17 on technical quals are part of the engineering
- 18 design and construction of all these projects.
- 19 Thank you.
- 20 MR. SPEYRER:
- 21 Thank you, Allison. Stephen. And then up
- 22 next will be Alfred Moses.
- 23 MR. CHAMPAGNE:
- Hi. I am Stephen Champagne, I am from New
- 25 Orleans. But tonight I represent the Lake

- 1 Pontchartrain Basin Maritime Museum. We are
- 2 here to announce a coalition that has formed
- 3 between the Lake Pontchartrain Basin Maritime
- 4 Museum and the Tchefuncte Basin Coalition as
- 5 well as the city of Madisonville to build,
- 6 restore a peninsula that formally protected the
- 7 mouth of the Tchefuncte River from the east
- 8 bank across the front of the river, as well as
- 9 to restore the property around the old light
- 10 house, which is a pretty significant landmark
- 11 to most of the people that are familiar with
- 12 that area. We are excited about our project.
- We are going to be expanding it more and we are
- 14 going to be putting out a letter of formal
- 15 comment explaining exactly what we are going to
- 16 be doing. And I've got John here from
- 17 Tchefuncte River.
- 18 MR. AMMERMAN:
- 19 From the Maritime Museum. But the
- 20 lighthouse was rebuilt after the Civil War in
- 21 1868. And it's a national treasure so we have
- 22 to protect it. So we have a designed a
- 23 project, fully permitted, for a bulkhead around
- 24 the perimeter, a breakwater, and a pier. We
- 25 want to take tourists from the museum up on the

river down to the lighthouse, but we have to
protect that thing first. So, in conjunction
with the Tchefuncte River Foundation, that is
another 5013C, they want to protect the mouth
of the river with a breakwater and redirect it
over to the lighthouse where it used to, the
river used to turn.

So in conjunction with the town of
Madisonville we are looking forward to helping
maybe bring some of these projects to the west
side of the parish. Under your Coastal Master
Plan there seems to be only one, Augusta
Island. Might be a void of vital projects on
that side. Maybe because of population, I am
not sure. But certainly the town of
Madisonville was inundated with flood waters up
the river in Isaac because that barrier was no
longer there. So it was a lot of properties
that flooded that never flooded before. Mayor,
you want to say something?

21 MAYOR PELLOAT:

I just want to say that the two organizations that are really joining now forces to try to protect that western part of the parish on the north shore of St. Tammany

- 1 Parish is certainly doing an excellent job and
- 2 we will submit something to you in writing so
- 3 that you can further investigate or look at
- 4 possibly giving us some assistance. Thank You.
- 5 MR. SPEYRER:
- 6 Thank you. Can you state your name?
- 7 MR. AMMERMAN:
- John Ammerman.
- 9 MR. SPEYRER:
- 10 Thank you, John.
- 11 MR. CHAMPAGNE:
- Just one last comment with the few seconds
- 13 that is left. What is interesting about this
- 14 project. This is a restoration of a
- 15 significant peninsula that was there and has
- 16 been decimated in the last fifty years because
- 17 people actually cut down the trees that used to
- 18 grow there. So we want to make that push to
- 19 restore that property.
- 20 MR. SPEYRER:
- I thought for a second there we might get
- 22 a request for nine minutes. But I certainly
- 23 appreciate you respecting time here tonight.
- 24 Alfred, you're next. And then David
- 25 Gegenheimer, you are on deck.

MR. MOSES:

1

I am Alfred Moses from St. Bernard. 2 I was looking at all the stuff you've been doing. 3 looks like you are doing a pretty good job at 4 it, as best you can. The Dutch been doing it 5 since the 1600's. but what we need to do is on 6 7 this - filling up those - in the marsh land where they drilled - dug all those canals and 8 9 stuff. We need to fill those. I would 10 recommend maybe taking Christmas trees, which you already are doing, but you just can't get 11 enough of them. But if you made it, you know, 12 13 like in, like in - let people know that you really want them. And every time you got one 14 15 of those canals that is near your - where the 16 silt and your fresh water is being poured into 17 that area, if you would fill those canals up 18 then that silt and the water would pack those up and it would fill quicker. And also, once 19 20 you got it filled like that, and it is fresh water, then you need to start planting trees. 21 And I am talking about like, if it is really 22 nicely fresh and high enough - it don't have 23 24 to be too high for pines to grow. They're 25 fast. Cypress trees are nice, but they're

slow, and in thirty year's time you will have pretty good tree out of that.

On the outside edges, and I was talking to a man over here about the mangrove. That is like the Florida Mangrove. That really holds together the land real well from the splash coming up on to it. You were saying that there is a problem - that maybe it might get too cold for them. Well, they are sitting in water already that only gets down to, you know, no matter how cold it get it ain't going to get down to that freezing.

Also, on the barbarian island thing. I was thinking if you could maybe talk with some of these energy companies that do wind turbine, turbine winds. And maybe you could lease on the backsides of the barrier islands they set their wind turbines up on the backside, and maybe even spots on the marsh land between. That way might be a way to get your money that you are talking about. The trees would be good, too, because the timber sells. And that is about the main thing that I am thinking of. You know, trees, and lumber, and wind turbine as way to get your money.

MR. SPEYRER:

Thank you, Mr. Moses. Appreciate it.

3 David. And then next up, Ms. Bonnie Peyrout.

MR. GEGENHEIMER:

My name is David Gegenheimer. August 29, 2005. Katrina. Everybody that lived in this area remembers it. I lived in Braithwaite, Louisiana at the time and I had seven feet of water in my home. It stayed for quite awhile. But it wasn't that August twenty-ninth, it was August 29, 2012, when a tropical storm by the name of Isaac put twelve and a half feet of water in my house, and flooded a lot of people in here that lived along the lake. Why? The effects of the Caenarvon Diversion. Caenarvon Diversion, maximum flow 7,500 C.F.S. Never ran at that strength. Anything over 5,000 put water outside the hurricane protection levees so the parish wouldn't allow it.

The thing very seldom ran, but what did it do? It brought in vines, specifically a little yellow - the locals call it pea vine. It grows a pod of peas, and it grows over the top of the native grasses and shades them out, they die. The (inaudible) that have a twelve to

eighteen inch root base. I've seen it grow

over the top of mum bushes twelve feet tall and

kill a whole ridge of them.

4

14

15

16

17

18

19

20

21

22

23

24

25

Empirical evidence, scientist don't like to look at that. But here I have a study that was done by University of Boston Earth Sciences Center, Pontchartrain Institute for Environmental Studies, University of New Orleans, and two different Corps of Engineers offices, and all I am going to read is the first paragraph. "During the 2005 hurricane season the storm surge and wave field associated with Hurricanes Katrina and Rita eroded 527 square kilometers of wetlands within the Louisiana coastal plane. Low salinity wetlands were preferentially eroded while high salinity wetlands remained robust and hardly unchanged." Which means that the water, the storm surge, it hits the outside, it hits the first land. That land holds up better than the land inshore.

Now nobody - I grew up in Houma. Nobody loves the natural progression of hard woods, to cypress swamp, fresh, intermediate marsh than I do. And we certainly need cypress trees. We

can't wait for cypress trees, how are we going to wait for all the years it is going to take for these sediment diversions to build land. don't doubt that they will, but the mid Breton at 35,000 C.F.S., the mid Barataria over 50,000. You know, they'll create land, but far less than is washed away by the simple flow of the water. And then the unattended

consequences of this pea vine that comes in and

smothers everything out.

I am not a stakeholder. I have no stake in oyster fisheries, shrimp, crab, you know, and I believe that we have to do what we have to do. Some people, you know, are going to be adversely impacted. But the mid Barataria was originally talked about at \$350 million, now it's over \$800 million. By the time - you know - fast track. It might be fast track but it will still be years. It will be well over a billion dollars. If it does, not even proportionately, to the wetlands in upper Barataria what Caernarvon did to the Caenarvon and Delacroix estuary. You know, then - I might be dead by then, but I will be telling all of y'all I told you so. Thank you.

1 MR. SPEYRER:

Thank you for your comment, sir. Bonnie.

She left. Rosa Herrin. And on deck Chris

4 McLindon.

MS. HERRIN:

Hi. How are you. I am Rosa Herrin from Orleans Parish representing Oxford America today. I just have three very specific asks for CPRA for the master plan. Number one is to provide incentives for small businesses to benefit from contracting opportunities when the big projects are implemented but also for small scale projects. Our second ask is to also provide incentives for community development, the community level approaches to elevation and relocation in order to maintain the character of our coastal communities. And the third one in regards to non-structural is to make sure

We see a decrease in the 2017 Master Plan where now there is only twelve percent of the money allocated for non-structural projects whereas the 2012 Master Plan had twenty percent

that for every eighty cents of the dollar that

is spent on structural and restoration, twenty

cents should go to non-structural.

- 1 of the money for non-structurals. We would
- 2 like to go back to the twenty percent, and we
- 3 would also like for CPRA to pass a resolution
- 4 allocating a portion of GOMESA monies for non-
- 5 structural and to ensure that those monies are
- 6 actually spent on that in the future. Thank
- 7 you.
- 8 MR. SPEYRER:
- 9 Thank you, Rosa. Chris. And then Harvey
- 10 Stern will be next.
- 11 MR. MCLINDON:
- 12 Hi. I am Chris McLindon. I live here in
- 13 Mandeville and I represent the New Orleans
- 14 Geological Society. The society is celebrating
- 15 its seventy-fifth year this year and we are
- 16 engaged in outreach. And our main effort
- 17 | lately is trying to get the ensure that the
- 18 science of geology and earth sciences are
- 19 incorporated into public projects such as the
- 20 Coastal Master Plan. And so I really, given
- 21 three minutes, I just want to address a couple
- of things here that have to do with the
- 23 Northshore, that is the importance of
- 24 understanding geological faults and improving
- 25 our ability to measure subsidence. And in the

case here the geological faults appear to be the main driver of subsidence.

So most people are surprised to find that Louisiana has as many geological faults as California does. We just have a much poorer understanding of where they are. The one thing that the New Orleans Geological Society is doing is trying to improve that. We are sponsoring research programs at the University of New Orleans, LSU, Tulane, and UL where we currently have nine graduate level research projects, they're using seismic data to map faults and we expect a good group of research to be coming out in the next few years.

Ultimately we hope this will be impactful to the 2022 master plan. Obviously it is not going to affect anything now, but I want to make public comment now. With regard to the Northshore, if you were to drive out on the Causeway from the Northshore about seven miles and jump off you would find a sand bar on the bottom of the lake. That is a beach ridge. That was the Northshore of Lake Pontchartrain about two thousand years ago. There is a recognized archeological site on that bar.

That was the edge of the lake, that's where people lived.

Over two thousand years the Northshore of Lake Pontchartrain has progressed northward by seven miles. That is due to subsidence, that is due to subsidence due to geological faults. There are geological faults recognized along the north shore of Lake Pontchartrain. If you were to drive out Lake Road in Lacombe, pay attention, when you cross the trace you will noticed that you drop down. Not only is that elevation lower but that side of the fault is subsiding faster than the other side. So we need to pay attention to where those faults are, and more importantly we need to improve our measurement capabilities for subsidence.

Right now we have nine, I am sorry, twelve stations that measure subsidence in south Louisiana. If you compare that to weather stations, there are two hundred weather stations that collect data. So you are tasked with trying to forecast the impacts of subsidence using twelve stations, that's very much like trying to do a weather forecast with twelve weather stations. So I really encourage

- 1 CPRA to put some investment into increasing the
- 2 ability to measure subsidence. Thank you very
- 3 much.
- 4 MR. SPEYRER:
- 5 Thank you, Chris. Harvey. Up next will
- 6 be Cynthia Duet.
- 7 MR. STERN:
- 8 Hello again. Harvey Stern with the New
- 9 Orleans Sierra Club. I just wanted to
- 10 elaborate on some comments that I ran out of
- 11 time for the last time, I hope I can get them
- 12 in this time. First, I wanted to quickly
- 13 repeat our request, the Sierra Club of New
- 14 Orleans request, that a full scale
- 15 environmental impact statement be completed for
- 16 the proposed gates across the Chef Menteur and
- 17 Rigolets before this project is considered for
- 18 inclusion in your Master Plan at a proposed
- 19 cost of nearly \$2.5 billion.
- 20 Inclusion in the plan at this time amounts
- 21 to promoting induced development on the north
- 22 shore of Lake Pontchartrain. In this regard
- 23 the proposed ring levee construction around
- 24 Slidell must also be assessed for its induced
- 25 development impact. Quoting from your own

plan, "Induced development occurs when the 1 construction of structural risk reduction 2 projects, for example levees, unintentionally 3 encourages development in flood hazard areas as 4 5 these projects can provide a false sense of protection. Effective land use plans can 6 7 direct development away from high hazard areas 8 and to help preserve the natural functions of flood plains and other critical areas." 9 10 is from your own plan.

11

13

14

15

16

17

18

19

20

21

22

23

24

25

These observations expressed in your attachment E1, which is not in here incidentally, but is online, attachment E1 of the draft plan. Not least among them is that the levees and similar structures encourage unwise induced development in flood plains, and that effective land use plans that recognize the inherent dangers of induced development can have a significant role in retaining the natural functions of flood plains including retention of well and habitat. These kinds of comments are the reasons that I give you a big thumbs up for attachment E1. It is an attachment in the appendix, but it needs to be given as much validity as what's in the body of

the plan.

19

20

21

22

23

24

25

Attachment E1 has several words to the wise in the form of policy recommendations which if taken to heart can only strengthen your draft plan. Specifically, A, "The state statute should be revised to require parishes and municipalities to develop Master Plan and land use plans that address sea level rise, subsidence, flood risk and land loss." That again is your direct quote. I think that quick brush should lobby state legislators regarding this important recommended revision. B, "DNR should revise the fast land exemption from coastal use permits specifically to require coastal use permits for properties that are projected to be five feet above sea level in the next fifty years as well as properties newly stricken by levees." Again, this is the induced development issue. C, and this again is a direct quoted as is in appendix E, it's in your plan. "Prohibit development in wetlands and other environmentally sensitive areas and avoid development that would require new infrastructure in coastal areas."

Now contradicting what I've just said are

several pending joint core permit applications 1 that highlight the need to take these, that is 2 your own recommendations, seriously. Not far 3 from here, near Covington, adjacent to Highway 4 5 10-95 is a proposed business park and residential development that would destroy 6 7 nearly fifteen acres of forest and pine This is in the heart of the St. 8 wetlands. 9 Tammany Parish non-structural risk reduction 10 project proposed in your own plan.

11

23

24

25

Perhaps the most blatant example of unwise development in the coastal flood plain is the existing chemical waste management hazardous waste landfill near Bayou Chopique in Calcasieu Parish less than thirty miles form the Gulf of That is about the distance between Mexico. Metairie and Mandeville, we're not talking about a great distance. Twenty-nine acres of jurisdictional wetlands and water bottoms will be lost from the expansion of this land fill if permitted. The applicant had previously purchased mitigation bank credits to compensate for lost wetlands, but it so happens that this hazardous waste landfill is in the vicinity of no less than twelve proposed hydrologic

- 1 modification projects listed in your
- 2 comprehensive draft Master Plan. Can we see
- 3 what is wrong with this picture?
- 4 MR. SPEYRER:
- 5 Mr. Stern, if we could please ask you to
- 6 wrap it up.
- 7 MR. STERN:
- 8 okay. In conclusion, in all these cases
- 9 the applicant has requested and based on many
- 10 hundreds of previous similar applications will
- 11 receive permission for offsite mitigation
- 12 through mitigation banks. In conclusion, your
- own recommendations in attachment El recommend
- 14 avoidance of wetlands contrary to what is
- 15 likely to be granted in the above examples.
- 16 | Mitigation banks have a mixed record at best
- 17 when it comes to preserving or reviving coastal
- 18 wetlands. We need to start thinking about our
- 19 force of wetlands as a largely non-renewable
- 20 resource who's value as both wildlife habitat
- 21 and effective storm buffers has proven it's
- 22 self time and again. Again, avoidance of
- 23 development in wetlands must be the policy, not
- 24 offsite mitigation when it comes to core and
- 25 coastal use permits. Please give your own

- 1 recommendations in attachment E1 as much
- 2 attention and effort as the structural risk
- 3 reduction projects outlined in the rest of your
- 4 plan. Thank you for the extra time.
- 5 MR. SPEYRER:
- 6 Thank you, Mr. Stern. And as mentioned we
- 7 certainly encourage you to submit public
- 8 comments formally in writing as well so we
- 9 could have those. Cynthia. And then up next
- 10 Mr. Ken Ragus.
- 11 MS. DUET:
- 12 Hi. Good evening. I am Cynthia Duet, the
- 13 Deputy Director for Audubon in Louisiana. I
- 14 also am the policy lead with the Mississippi
- 15 River Delta Coalition representing several,
- 16 many NGOs nationally and locally. First of all
- 17 I would just like to thank you all for not only
- 18 the recent public outreach that's been really a
- 19 great success. I have been to several of these
- 20 meetings and some in the prior two months, and
- 21 they have just been fantastic, but also for the
- 22 exhaustive, tireless work in the last two years
- on the framework development team, all the
- 24 focus groups, all the many community and other
- 25 legislative engagements that you all have

pulled together. It has been - it has been a really massive effort and I was around in 2012 and I can say that with confidence. So we really appreciate that.

Secondly, amendment to the diversions in this plan is very strong. And it's a welcome signal, and much appreciated by our group. Particularly considering we are in the first year of this new administration, the commitment seems as strong or stronger than ever. And we look forward to working with you all moving forward. We would love to see dirt turned on a large scale sediment diversion by the time or before the next Master Plan in 2022. So with the new federal dashboard in place, and all of your continued work, we really, really appreciate all that that's is going on.

So there is some daunting, daunting relative sea rise figures and maps that go along with this plan. And I am sure that it frightens a lot of the citizens that you deal with, and the two million that live in the coastal area. But we would just encourage you to keep on trucking, keep on building, implement this land and don't let anything stop

you. Make that commitment to the citizens that you will do the best you can even though it may not be restoring the coast to a specific time period back in the fifties, sixties, seventies, or otherwise. Keep moving forward.

25

One of the ways to do that we would like to help you with is funding. Funding is the absolute key. So moving forward here from today, while the BP dollars to be expended on recovery are very, very important they're certainly not state recurring revenue, federal annually recurring revenue, and we would look forward to helping you to look for new sources of funding, bonding capabilities and capacities, and other such schemes to make sure that this plan can be implemented in the near future. One way that it might help you save a few dollars today is if perhaps the legislature and also the, you know, administration would consider stopping the major budget sweeps right now, the five percent budget sweeps. understand that there is a fiscal crisis, completely understand we have a problem. the five percent draw downs during the mid-year budget cycle sweeps during deficit cycles, it's

- 1 killing the program in my opinion in terms of
- 2 taking away those dollars that may only be used
- 3 for overhead costs. And we want you to
- 4 implement this program and we don't want you to
- 5 have fiscal problems while you are trying to do
- 6 it. So look forward to helping, and look
- 7 forward to next session, and thank you so much
- 8 for your time. We appreciate all your work.
- 9 MR. SPEYRER:
- 10 Thank you, Cynthia. Mr. Ken. Rebecca
- 11 Triche, you are next.
- 12 MR. RAGAS:
- 13 Hi. My name is Ken Ragus. I am from
- 14 Buras, South Plaquemines Parish. I was born
- 15 there in 1943 and lived there until 2005. I
- 16 was one of the original foundations of the Save
- 17 Louisiana Coalition which has about a thousand
- 18 person membership who are against river
- 19 diversions and are in favor of pipeline
- 20 dredging and restoring portions of Plaquemines
- 21 Parish which have been devastated by various
- 22 means, oil companies, whatever. And, you know,
- 23 I know all these guys on CPRA. They are
- 24 friends of mine, I don't have nothing against
- 25 them, I love them all. But we can't wait fifty

- 1 years, you know.
- 2 So, you know, I am not going to my
- 3 family and my future is not going to be
- 4 determined by the National Wildlife Federation,
- 5 Environmental Defense Fund, the Sierra Club,
- 6 the Water Institute of the Gulf. They don't
- 7 care about my family or my culture. So I have
- 8 been involved in this for about twenty-six
- 9 years after the Breaux Act was passed in 1990.
- 10 I was active in CPRA, I still am active in
- 11 that. Actually way back then I was in favor of
- 12 diversions. I mean I could, you know, I could
- 13 give you data. I have a process engineering
- 14 background and was in a crew boat business in
- 15 Venice for twenty years, and I, you know, I
- 16 love science, I love the river, I love math. I
- 17 don't like computer models and I don't like
- 18 virtual reality. Thank you.
- 19 MR. SPEYRER:
- Thank you, Mr. Ragas. Rebecca. Douglas
- 21 Lloyd, you are next.
- 22 MS. TRICHE:
- 23 Hi. I am Rebecca Triche, I am the
- 24 executive director for Louisiana Wildlife
- 25 Federation. We have long been active in

about it, engaging others such as National
Wildlife Federation, of which we are an
affiliate, on MRGO must go coalition from the
very early days. So we have seen the evolution
of the plan and we applaud the work that has
been put into it and it's evident in your
presentation the complexity and the adaptive
approach that you taken to it for the update.

1

2

3

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So we believe a large ecosystem approach is important. We are excited to see the commitment to sediment diversions, as well. In particular, a large diversion of fresh water into Maurepas Swamp, and that is a project that we are looking forward to seeing coming online, it has a big benefit. And that whole area which is in this basin is sinking. It's a coastal forest that is threatened, it's public It has all of the, I think, examples of lands. the problems that are happening to Louisiana, and it's creeping closer to our citizens, our fellow folks who don't realize how close they are to the coast. So we are excited to see those kinds of projects come in as well as the smaller view.

We do ask that - it has already been 1 mentioned, but, you know, to include in design 2 the interplay. You know, leaking levees, locks 3 for fisheries, you know, we really do need that 4 5 tidal exchange as well as the abundance of habitat created to keep the fisheries that we 6 7 depend on, that we have come to utilize. 8 that's important going into the future in 9 design. To follow up on Cynthia Duet, you 10 know, I want to point out to all of us here, we don't have enough money that we can envision to 11 implement this plan and all of us could help 12 with that. We can all continue to talk about 13 how important it is and we can support ways 14 15 that the funding can be brought forward. We 16 are going to need all avenues. And we are 17 going to need help from the national level, 18 state, and local. And so we need to be talking about that and be engaged ourselves, each of us 19 20 here. We are here to listen what other people are commenting here, on behalf of Louisiana 21 Wildlife Federation. And we so much want to 22 help the success of the state, and for all of 23 24 our sportsmen and the people that depend on it. 25 So thank you.

24

25

Thank you, Rebecca. Douglas Lloyd is next and then Daniel Rector, you are on deck.

MR. LLOYD:

Thank you very much for the opportunity to address you. I certainly appreciate you choosing St. Tammany Parish as a venue. term St. Tammany resident. I always enjoyed living here, but I find myself spending an inordinate amount of time over the last forty years on the big island in Washington D.C. surrounded by the sea of reality. And I would just like you to know that irrespective of the fact that we are all on board here there is a lot of donor burnout in our capitol. And when it comes to Louisiana and money there are some folks whose eyes glaze over in a hurry. there is going to be a need for a lot of selfhelp and heavy lifting when it comes to our plan.

I think you really hit some really dynamic good things with this plan. I have written a lot of strategic plans, been involved with program management in all different kinds of levels, and the planning process incredibly

important. Falling in love with a particular plan, whether it is 2012 or 2017, not so important. I am an engineer. I love those little details, and the minutia, and the tactics, and everything that go along with it and all the data. It is wonderful, but I even got caught paying attention in an economics class when I was going to school and one of the things that hit me between the eyes was Moore's Law. Every twenty-one years - I don't care what you deal with, whether it is a gallon of gasoline or a pair of pants, it's going to double. So whatever projections we got now in

terms of cost, it's going to cost more, it's

going to cost a lot more.

And in that respect I have spent a lot of time working for the Department of Defense. My comments are only my own, but worked a long time ago for a little guy, Commandant in the Marine Corps, name was Crulack. He is -turned out to be an absolute savant when it came to money. He said that vision without resources is hallucination. And I just would like to follow up on the last couple of speakers. Especially what Ms. Cynthia said and

some others that funding. Funding is going to be absolutely critical. There is a lot of inherent strengths in Louisiana when it comes to solving some of our own problems, especially when it relates to things that are in the maritime and wetland environment.

We didn't get this way over night and we won't get healthy again over night. Having those projects that are identified in the plan ready to go so that when you've got year of execution money you can hit the ground running and meet everyone's expectations when it comes to finishing that project, and declaring victory, and putting that green checkmark in your box. That is going to be incredibly important. Lag time and getting those projects done - there is not a chance.

The other thing I would encourage you is

- this has got to be a whole government

approach. The parishes - parishes are going

to be up to this to their eyeballs, too. There

is no deferring this to the state, deferring to

the federal government, so I encourage - I

will be providing some written comments, and I

really, really want to thank you for being

- 1 here tonight. I know how difficult this has
- 2 been. Thank you very much.
- 3 MR. SPEYRER:
- 4 Thank you. Daniel Rector. And if you
- 5 have any more sheets, this will be my last one.
- 6 Go ahead and pass them in and we will get you
- 7 called up next. Daniel.
- 8 MR. RECTOR:
- 9 Hi. Thank you. So my name is Daniel
- 10 Rector and I have been studying delta, and
- 11 coastal systems, and alluvial systems for about
- 12 thirty-five years. My family has been here
- 13 since the 1700s. And I wasn't going to get up
- 14 and speak but I feel like I have to because I
- 15 haven't heard anything mentioned about the
- 16 biggest loss of wetlands and the reason for it.
- 17 And I want to touch on something that the
- 18 senator had said earlier about fighting nature
- 19 because that is what we have been doing here
- 20 for a long time. Delta systems are good for
- 21 about 700 years, and in 1973 if the Corps of
- 22 Engineers hadn't have stopped it per the
- 23 government, the Mississippi River would have
- 24 taken a right turn at old river diversion,
- 25 which I am sure you are all aware of. The cost

to keep that structure in place, the cost to
keep the river dredged - there is about
sixteen feet of gradient from there, about an
hour north of Baton Rouge all the way to the

5

6

7

8

9

10

11

12

14

15

16

17

18

19

20

21

22

23

24

25

shelf.

Louisiana is built by sediment. From about the second half, the bottom half of Louisiana, it's all sediment. It's all brought here by the Mississippi River mostly. there is two things that happened to it. Since the 1973 this is what has been happening to the land. Some of it gets caught up in dams somewhere between Minnesota and the Gulf. can look at any dam that is on the Mississippi River and it looks like a - basically a curve, and then the other thing that's happening to the land, and this is where most of it is going, it's falling off the continental shelf. That is why it is so deep at the mouth of the river.

What the Mississippi River wants to do is flow through the Atchafalaya River. It wants to build new land. I am working on getting a map and I will submit that map that will show what land would be here had we allowed the

1 Mississippi River to do what it wanted to do in 2 1973. Nothing even comes close to that.

These diversion projects - things that are on the table. They are all wrong. That is the wrong question. We can't fight nature. This is what I know about it because I have been studying it for a long time. Whatever generation finally allows the Mississippi River to do what it wants to do, whether it's a year from now, five years from now, or a hundred years from now will be looked at as a smart generation. And if we allow the Mississippi River to do what it wants to do and start planning for it, building new things, coastal fisheries will boom.

I get so mad when I see billion dollar investments going on between New Orleans and Baton Rouge and above Baton Rouge. That is ridiculous for the politicians to keep allowing that to happen. That's not what the river wants to do. Look at the bulk of land that Plaquemines Parish is. It's on its seventh delta right now. We can't compete with that, that's so much land. Look at the cost of dredging. You have already said that is the

1 biggest cost you have. That's because we are

2 trying to keep the Mississippi River from doing

3 something it doesn't want to do. It is over

4 with. It wants to flow through the Atchafalaya

5 River. We need to start planning for that.

6 Thank you very much.

7 MR. SPEYRER:

8 Thank you. Mark Gagliano.

9 MR. GAGLIANO:

16

17

18

19

20

21

22

23

24

25

Good evening. I, too, wasn't going to stand up and say anything but many of you know my father Sherwood Gagliano. He originally planned to be here tonight and couldn't so I thought I would stand up. I first wanted to thank you guys again. I am a local resident, I live in Covington. I lived, I guess, for twelve years in Madisonville right across the street from Mr. Pelloat and his sister Jackie.

The last storm was a little bit of an eye opener. Water came right up to our door step and that was kind of my queue. I had a young daughter. We work for CPRA. I just personally finished working on your St. Bernard Living Shoreline project. If I had two things that I wanted to say tonight it would be one, Chris

McLindon's comments on the faults, as many of you know my father has been working on that with Chris for quite a long time. As many of you know also I have lived this my whole life. I still remember the day my father brought me in the living room when I was a small child and he said, "This is where our coast was going to be in twenty or thirty years." Well, I am almost fifty years old and I am seeing that come to fruition.

You know, one of my science teachers in the eighth grade, when my father produced a lot of these documents publicly, said he was a whack-o. Well, I stand here today and we're looking at these maps and it's an eye opener. But I also wanted to encourage y'all, including with the faulting, I think it is a very, very serious issue. You know, before we spend this kind of money creating these large restoration projects, which I am in favor of, I think you guys are doing an excellent job and the process about how you are doing it is outstanding. But lets make sure they don't drop off into the you know, something that we are going to spend a lot of money on could disappear.

Second, I have heard several speakers 1 reiterate this, but we are a small business. 2 We keep our funding here and our money here in 3 Louisiana, but a lot of national firms have 4 5 moved in because they see these big dollars. Please just remember the small companies such 6 7 as ourselves, we employee a lot of people in 8 the state. And also please if you could 9 continue to include smaller projects. every one of the companies in the state is a 10 Fortune 500 and can submit the kind of 11 12 qualifications that I know eye pop you guys, 13 25,000 employees. We really need that to stay alive. Smaller projects, shoreline protection, 14 15 let's protect the land we have. Thank You. MR. SPEYRER: 16 Thanks, Mark. Certainly send our best to 17 18 your dad, Mark, as well. We miss having him here tonight. Are there any other public 19 20 comments? If anyone else like to step up to the mic now you are certainly free to do so. 21 22 Well, as I said we certainly appreciate it.

Today is not the only opportunity to provide

public comments, you've got until March twenty-

23

24

25

sixth.

Page | 516

For those of you that want to sit tight we are going to move into our Annual Plan presentation which won't be nearly as long as Bren's. Jason is like Speed Racer when he gets up here. So he will go through the Annual Plan presentation and then we will take public comment on that. So if some of you are leaving we would just ask you to please expedite the room, that way we can move into the next presentation for the those that are interested in sticking around. And thank you to those who are leaving. And thank you to those that are leaving, we certainly appreciate your time.

We'll get started with the Annual Plan presentation in one minute. Grab some king cake and a sandwich for the road if you haven't already done so. And speaking of, for those of you still here, I was remiss to say it earlier, Restore or Retreat, a non-profit based in the Lafourche Parish area. as well as the Greater New Orleans Foundation were generous enough to provide both drinks and snacks for us here tonight. So we appreciate their support. It makes for a better meeting when everyone has a little caffeine and sugar.

All right. With that we are going to go ahead and get started. We would ask if anybody that's sticking around and wants to chat, if you don't mind walking through those doors so we can respect the rest of the folks that are here. So with that we are going to now shift gears to draft fiscal year 2018 Annual Plan. And Jason Lanclos, Deputy Director of CPRA will walk you through it. Jason. And folks, if you could please leave the room, we would ask you respectfully to please leave the room so we can get on with this presentation.

MR. LANCLOS:

Good evening, everybody. Thanks for having us here. I have enjoyed the public comments and I am going to try and keep our Annual Plan presentation very brief. But I am going to just run through a couple of slides very quickly just to kind of give you a general overview of how we spend our money.

A little background on the Annual Plan.

So a couple of things that I would like for you to get out of it before you leave here tonight.

Bren did a tremendous job, and has done historically on giving you an overview of the

Master Plan. What the Master Plan does is work directly in conjunction with our Annual Plan. So the Master Plan lays out the priorities of the agency, the Annual Plan is actually where the rubber hits the road and describes exactly which projects that we are going to be focusing on not only the next fiscal year, but the two years beyond that. So it gives you a three year overview from fiscal year 2018, 2019, and 2020.

so if you are curious you can really dive into a lot of details in Appendix B and C.

That is where we list all of our projects and you have a lot of details on phase, whether they are in construction. I would also encourage you to view, we have another viewer called CMS, which is the coastal monitoring.

It's, it's a - you can log in to our website and go to the link, and it provides just a wealth of information on projects and where we are in terms of construction and overview of where we are.

So just a quick look in terms of where we are. Obviously we are here in Mandeville tonight. Glad to be here. This plan, and also

with the Master Plan, is going to be going through the legislature just like it does. So it has to go through committees, has to get approved by the House, has to get approved by the Senate. So every, every project that we are submitting in here, and you will see some of the numbers in just a minute, has to go through the legislature. So we have been doing a tremendous amount of work here in the last several weeks just to meet with the legislators to make sure that folks understand and are aware of where we are focusing on these projects, what projects we will be focused on, etc.

So just a couple of quick points. We do
like to highlight a lot of the work that we
have done over the past year. These are just a
few projects to look at. The Caminada
Headlands project, the phase two portion of
this project was the largest project,
restoration project, that CPRA has ever entered
in our whole agency's time period. So it's
about \$140 million just in phase two, with
phase one over \$200 million. The Shell Island
West project which is funded with NERDA early

restoration dollars. This is a picture in the 1 middle of the long distance sediment pipeline, 2 3 Bayou Dupont, phase three. The Living Shoreline project that Mr. Gagliano referred to 4 5 which is in St. Bernard Parish. And then the Amite Hydrologic Restoration Project is there 6 7 as well. So that's a smaller project, about a 8 \$4 million project, but a tremendous amount of 9 benefit.

23

24

25

So just a quick look ahead. Obviously you have heard about the Master Plan here tonight, but one thing that we do want to mention is that - what are we doing? So what are we focusing on in the next year? We've had a lot of different diversified funding streams that we have been very fortunate to have. those like the SeaApp program, and the Coastal Impact Assistance program provided almost \$497 million to the state and the parishes for the implementation of these projects. program, but it did end at the end of December. So those projects have all come to a close on the construction side. The CDBG program which is funneled through the state that we helped to implement through the parishes and also through us. That was another great funding stream, but that program is going to come to a close.

24

25

So what have we been doing? Bren's group has been tremendously busy over the last several years. We knew that a settlement and a consent decree was going to be signed so the planning division was very, very busy trying to get the Master Plan ready, but also to plan for projects that we could have ready to go when those oil spill dollars did come in. you are going to see in the numbers that I am going to show you in just a few minutes is the focus on the work that those guys did in the planning phase. You are now starting to see a tremendous amount of uptake in the engineering design phase in our program, which is a direct result of anticipating those oil spill dollars coming in. I won't bore you with a lot of tables - you can go to the executive summary table one or table two to look at our revenues and expenditures. This just provides you just a general breakdown of how we get our money, where the revenue sources come from.

I won't bore you with a lot of the details, but just to give you a quick couple of

1 highlights. Our funding is extremely complex.

2 We get money form a lot of different sources

3 but we have a very limited amount of funds that

come directly from the state mineral revenues.

5 Those mineral revenues that we get from the

6 state have seen a dramatic decrease from about

7 \$30 million over the last several years. We

are down to \$14 million. And although that

9 doesn't sound like a lot our budget for those

10 expenditures have been cut in half, and what it

11 does is it constrains us on a lot of these

12 grant-based funding programs to go out and

13 front money to get reimbursed. So when that

14 gets cut the programmatic expenditures that we

15 can partner with on different parishes with

16 Ducks Unlimited and a lot of other foundations.

17 We're very limited in the amount of funds that

18 we have that we can provide assistance to levee

districts as well. So what that does, again,

20 just to give you that broad overview to go from

21 thirty to fourteen has been a significant

22 impact on our finances, but we also have been

23 very fortunate to have some of these other

24 funding streams.

4

8

19

25

Just a note here without leaving the table

up for too long. The oil spill revenues and a 1 lot of these other sources - a lot of folks 2 look at us and say, CPRA you have a tremendous 3 amount of money, why aren't you going out and 4 building these projects, why can't you transfer 5 funding from oil spill dollars and go and build 6 7 a levee or a protection project. The grant-8 based program and the funds that we are getting 9 in from the oil spill are very restrictive. 10 They are going to a specific injury that occurred in a certain area. That is not to say 11 12 that the funding and restoring some of these 13 other funding streams can't be applied toward other types of projects. But again, it is 14 15 complex funds. We have to manage those funds, 16 and a lot of the funding streams that we have 17 available have to go to certain types of 18 projects. So just for example, the NFWF funding that I am going to talk about in just a 19 20 minute, those funds that we get from the National Fish and Wildlife Foundation have to 21 go to barrier islands and diversions. So just 22 23 to give you kind of a broad overview. 24 So this is our table of expenditures. 25 fiscal year 2018, this is a slide that I often

talk about for a long time and I am not going 1 to do it tonight. One of the things that we 2 are very proud of over the last several years, 3 and I have given this presentation quite a bit, 4 5 is the green portion of this graph. That green portion has gone down a little bit, but of that 6 7 percentage fifty-six percent is still in 8 construction. The reason why it has gone down 9 is because we have a tremendous amount of 10 uptick in projects that are in engineering design that have come out of the planning 11 phase, for oil spill projects, and shifted 12 13 toward planning. But still, a large portion of our operating budget, and expenditures, and 14 revenues for fiscal year 18 is going toward 15 16 building and constructing projects.

Our group is specifically responsible for implementing projects and we take a lot of pride in moving as many projects as we can into construction as quickly as we can. So we have a lot of projects that are going into engineering design. You'll see a budget of about \$123 million there. And the other thing that I want to highlight is that our operation budget is only about five percent. We are a

17

18

19

20

21

22

23

24

25

very lean agency, we only have about 170 folks, so when you look at the amount of work that we are implementing it is very close to what the DOTD in the state government would implement, but we are doing it with a lot fewer people and we are very proud of that.

1

2

3

14

15

16

17

18

19

20

21

22

23

24

25

So in terms of major funding sources. Our state mineral resources that I mentioned earlier that's gone from thirty to fourteen million. But the Gulf of Mexico Energy Security Act, that revenue is expected to come in in federal fiscal year 2018, which is actually CPRA's fiscal year 2019. So it's \$176 million total that's coming into the state. that the thirty-six million goes to the individual parishes. They have a very complex formula that if you want to stay up late at night and read about it you can see how it is calculated, but we are monitoring that very closely. We are looking at probably a slight reduction in the hundred forty million just because of the amount of oil leases that have decreased over the last several years. But, again, it has still been a funding stream that we put a tremendous amount of merit in to

really continue to carry our mission forward with that revenue stream. So again, GOMESA.

Some of the other funding sources that I mentioned, the National Fish and Wildlife
Foundation, that \$245 million grant is a very
large boost for us to advance to diversion
projects, the mid-Barataria and mid-diversion.
So we have a tremendous amount of work going on
in engineering design. We have a whole group
at CPRA that is working specifically on
advancing those diversions. We have a
tremendous amount of resources dedicated to it.

This is the first plan for the NERDA restoration - went out in January and we actually have a plan that is going out with that lists, six projects for engineering design which total to about \$22 million and then also the Restore Act. The plan that is out for public review that encompasses about \$812 million worth of projects. And then the QUIPRA Program that provides about another \$80 million worth of revenue for us that we partner with a lot of other federal agencies to implement and build projects. This has been a tremendous revenue program for us.

CPRA in its infancy, the \$80 million or the \$60 million that we got from QUIPRA in 2008 and 2009 used to be our main source of revenue. So you can see that over the last several years we have grown from implementing about \$100 million in projects to about \$600 or \$700 million worth of projects.

So moving forward, a couple of things.

This is just an excerpt of one of the oil spill projects in our plan. It just kind of gives you an overview of where those projects are. I would encourage all of you, I know you have been here for a very long period of time, but look at the Annual Plan. It's very similar to what we are doing in the Master Plan. It's a draft plan, it's out for public comment if you have comments about what's in it, what type of projects we are focusing on. Take a look at it. It is a quick read, you know, it is a bit of a lighter read, but there is a lot of information in it.

So again, we're grateful, we are very thankful to be here tonight. Thanks for staying around. I know that it has been a long night for everybody but we appreciate you being

106

here and we look forward to continuing to work 1 in this area and build and implement projects. 2 3 So have a good night. Thank you. MR. SPEYRER: 4 5 Thank you, Jason. As you will see up on the screen we are going to open up the floor 6 7 for public comments. I don't have any cards 8 but if anyone would like to provide public 9 comments just walk on up to the mic. If there are no formal public comments here in person 10 you have got these other options in which you 11 are able to provide public comments, we 12 13 certainly would love to hear from you. There are still a few more pieces of cake. 14 15 a few sandwiches in the back that you certainly 16 can make yourself welcome to. And once again on behalf of everybody from CPRA, we certainly 17 18 appreciate you taking the time to be with 19 tonight. We look forward to working with you 20 in the future. Thank you. 21 (The public hearing concluded at 7:23 p.m.) 22 23 24

1 REPORTER S PAGE

I, Tricia Gregory, Certified Court
Reporter, in and for the State of Louisiana,
the Officer, as defined in Rule 28 of the
Federal Rules of Civil Procedure, before whom
this sworn testimony was taken, do hereby state
on the record:

That due to the interaction in the spontaneous discourse of this proceeding, dashes (--) have been used to indicate pauses, changes in thought and/or talk overs; that same is the proper method for a Court Reporter's transcription of proceeding, and that the dashes (--) do not indicate that words or phrases have been left out of this transcript.

Also, any words and/or names which could not be verified through reference material have been denoted with the phrase "(inaudible)."

Tricia Gregory, C.C.R. #2015008

1 CERTIFICATION

I, the undersigned reporter, do hereby certify that the above and foregoing is a true and correct transcription of the stenomask tape of the proceedings had herein, taken down by me and transcribed under my supervision, to the best of my ability and understanding, at the time and place hereinbefore noted, in the above-entitled cause.

I further certify that the witnesses were duly sworn in by me in my capacity as a Certified Court Reporter pursuant to the provision of R. S. 37:2551 et seq. in and for the State of Louisiana; that I am not of counsel nor related to any of the counsel of any of the parties, nor in the employ of any of the parties, and that I have no interest in the outcome of this action.

I further certify that my license is in good standing as a Court Reporter in and for the State of Louisiana.

Tricia Gregory (#2015008)
