COASTAL PROTECTION AND RESTORATION AUTHORITY

This document was developed in support of the 2023 Coastal Master Plan being prepared by the Coastal Protection and Restoration Authority (CPRA). CPRA was established by the Louisiana Legislature in response to Hurricanes Katrina and Rita through Act 8 of the First Extraordinary Session of 2005. Act 8 of the First Extraordinary Session of 2005 expanded the membership, duties, and responsibilities of CPRA and charged the new authority to develop and implement a comprehensive coastal protection plan, consisting of a master plan (revised every six years) and annual plans. CPRA's mandate is to develop, implement, and enforce a comprehensive coastal protection and restoration master plan.

BORROW SOURCE VOLUMES

The fill volume and replenishment rate for each borrow source is described in Table 1. The replenishment rate is calculated based on the assumption that enough sediment will be deposited in river, maintenance dredging, and Lake Calcasieu interior borrow sources to fully replenish the borrow source in 10 years, whereas other interior sources and offshore sources have no means of replenishment.

Table 1. Available Sediment by Fill Volume and Replenishment Rate for each Borrow Source
